Andhra Pradesh Capital Region Development Authority
Amaravati, Andhra Pradesh
File No: MAU61-EE0ENV/22/2026-ESM

From
The Commissioner,
APCRDA,
Amaravati,
Andhra Pradesh.

To
The Member Secretary,
SEIAA, Andhra Pradesh,
3rd floor, AP Markfed building,
Autonagar, Vijayawada.

Sir,

Sub: APCRDA – Greenfield capital city - Submission of 1st half yearly compliance report 2026 – Reg.

Ref:

1) EC Order No.SEIAA/AP/GTN/151/2015, dt. 09.10.2015
2) Judgement of Hon'ble NGT dt: 17.11.2017.
3) EC amended order SEIAA/AP/GNT/151/2015-515 dt:11.06.2018

------X------

1. Vide ref 1st cited, the Amaravati greenfield capital city project has been issued Environment clearance and vide ref 2nd cited, Hon'ble NGT has issued directions and the SEIAA complying to the directions, vide ref 3rd cited has issued EC amendment.

2. It is to inform that, as per the general condition (vii) of the EC, 1st half yearly compliance 2026 including conditions of the Amended EC in compliance to the direction of Hon'ble NGT is herewith submitted. The copy of the compliance report is uploaded on the Parivesh portal of MoEF & CC.

Note: Soft copy of the Compliance report – conditions of EC and amended EC with annexures is communicated through mail.

Commissioner,
APCRDA

Copy to The Regional Office, MoEF & CC
The Zonal Office, CPCB
The ZO and RO office, APPCB
The Implementation Committee
The Supervisory Committee

Digitally signed by
VIJAY RAMA RAJU V

POST EC COMPLIANCE STATUS
ON
ENVIRONMENTAL CLEARANCE CONDITIONS
OF
GREENFIELD CAPITAL CITY AMARAVATI
(Order No. SEIAA/AP/GTN-151/2015, Dated: 09.10.2015 Amendment Order No. SEIAA/AP/GNT/151/2015-515, Dated: 11.6.2018)
1st Half-Yearly EC Compliance Report – 2026 (Jan - Jun)

(A) Specific Conditions:

WATER ENVIRONMENT

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The Krishna river be protected from all types of harmful discharges from all developmental activities before, during and after Capital Region Development.	All adequate measures have been taken to prevent entry of harmful discharges such as Raw/Treated Sewage/Wastewater into River Krishna. The city is divided into 13 LPS (Land Pooling Scheme) zones and each zone is planned with STP, UG sewer lines and reuse lines. LPS works were commenced prior to 2019 and were halted from June 2019 till 2024. In 2025 works are being revived and Tenders for the LPS zone works are concluded (except one zone). Tenders for 12 STPs are concluded. STPs are planned with tertiary treatment systems. The development of Avenues, reuse lines for the supply of treated waste water from the zonal STP for various reuse applications are part of the BoQ. Abstract of a LPS zone work is enclosed in Annexure 1. Large scale Buildings: STPs are included in BoQs in Amaravati Government Complex buildings

S. NO.	EC CONDITION	COMPLIANCE STATUS
		(Interlinked building projects). BoQ of an interlinked project showing STP provision is enclosed in Annexure 2 (See pg 93 of 184). STPs are established in Existing Government complexes and Private Universities.
2	The proponent shall utilize only surface water from Krishna River and Kondaveeti vagu to the tune of 1067 MLD, after obtaining the approvals from the concerned statutory bodies and after proper treatment in the proposed Water Treatment Plants. Proponent shall ensure supply of water round the clock i.e., 24×7, meeting the drinking water quality standards as per IS 10500.	WTP with Water supply lines works have commenced and source of water is from te Krishna river. The IS 10500 will be ensured during operational stage. During construction stage, the condition is being complied. Water for all the interlinked projects, labour camps including existing Interim Government Complex and Judicial complex and Universities in the capital city is being drawn from Krishna River from existing lift irrigation schemes and supplied through water supply lines laid by APCRDA. . The functional government buildings and the Universities have WTPs within their premises. At city level for the supply of treated water, a WTP of 190 MLD capacity with ZLD has been awarded prior to 2019and around 30% of the work has been completed. Works were halted from June 2019. Now in 2025, works have been recommenced. For the immediate drinking

S. NO.	EC CONDITION	COMPLIANCE STATUS
		water requirements of the interlinked building projects in the Amaravati Government complex, a WTP of 10 MLD near Rayapudi is completed. The Treatment standards to IS 10500 for the during construction stage in the labour campsis being ensured.
3	The proponent shall construct nine internal detention ponds and two reservoirs within the Capital City in addition to two external detention ponds of adequate capacity to overcome the flood menace posed by the Kondaveetivagu and its tributaries. The proponent shall carry detailed hydrological study of the Kondaveetivagu and its tributaries and plan location of detention ponds and reservoirs to achieve twin objectives – combat of inundation and utilization of water. The proponent shall consider factor of increase in intensity of the flow and volume due to pavement of the City and area inundated for 1 hour or more and having water depth more than 6 inches may be considered as affected by water logging for designing of Storm Water Drainage System. The proponent shall take into account climate change considerations and design storm water drains for 20% more capacity than the calculated discharge. The proponent shall protect and improve the existing natural	The Hydrological studies of the Kondaveeti Vagu and its catchment has been done by Tata consulting Engineers Ltd. and Arcadis(Netherlands based firm). The flood management report is enclosed in Annexure 3. Detention ponds, improvement to the storm water drains, construction of Gravity canal and pumping stations are designed as per the recommendations of the said studies. The hydrological study of the Kondaveeti vagu and its tributaries has considered the expected paved areas and its factor contributing to flooding conditions and options were suggested for the flood management infrastructure in the studies. Climate change aspects are also considered in the design. The design considered the effects of paved area and the storm sewers are designed considering the 1 in 5year storm frequency and canals, detention ponds and flood pumping stations are designed considering the 1 in 100year

S. NO.	EC CONDITION	COMPLIANCE STATUS
	drains and construct modern storm water drainage system to avoid flooding and water logging problems. The proponent shall ensure that sewage shall not enter into storm water drainage system under any circumstances. Proponent shall construct adequate detention ponds and reservoirs at appropriate locations to collect entire storm water. Proponent shall also take measures to strengthen the Krishna River Bund to minimize flood related issues.	24 hr return rainfall. Separate underground systems for the Sewage and Storm water network are planned along all roads and works have been commenced. The storm water system for the city includes the network of existing natural streams, city storm sewers, detention ponds, canals. It is planned to achieve twin objectives to combat inundation and utilization of water. The Reservoirs (Detention ponds) near Krishnayapalem & Neerukonda and Shakamuru are part of the flood mitigation and they are interconnected to the Storm water network. Flood mitigation works were commenced prior to 2019 and later halted during 2019-2024. Works have been re commenced in June 2025. Krishna River bund strengthening will be taken up after prior studies.
4	Detailed studies on the flood management of the Storm water drains, mainly Kondaveetivagu and its branches and a detailed plan to avoid inundation of the areas be developed taking in to account of the impact of the increased built up area in different development zones of the project.	The Blue Master Plan has been prepared in consultation with the Expert Committee constituted by Government of Andhra Pradesh for flood management works in Amaravati. Further, the DPRs have been reviewed by the KWD, the World Bank & CLC Singapore. The WRD Department, GoAP has vetted all the designs and DPRs. The design considered the

S. NO.	EC CONDITION	COMPLIANCE STATUS
		effects of paved area and the storm sewers are designed considering the 1 in 5year storm frequency and canals, detention ponds and flood pumping stations are designed considering the 1 in 100year 24 hr return rainfall. To avoid inundation, as per the studies, the existing natural streams are proposed for improvement in terms of its widening and deepening without altering its course, a new canal called gravity canal is proposed to divert the Kondaveeti vagu upper catchment runoffs from entering the city. Two pumping stations are proposed one at Vykuntapuram which receives runoff waters from the Gravity canal and other pumping station at Undavalli which receives the storm water runoffs from the city catchment area. Further, 3 reservoirs of capacity 0.53 TMC are planned in the city which act as detention ponds. The flood mitigation works (3 detention ponds, improvement to Pala vagu, Kondaveeti vagu, construction of Gravity canal are awarded and works are commenced during June 2025) Further, as part of the flood mitigation, separate under ground storm water network is planned along all streets with final outlets into vagus with outlet levels above the HFL of the vagu. Kondaveeti vaagu pump

S. NO.	EC CONDITION	COMPLIANCE STATUS
		station with a capacity of ~5250 cusecs is commissioned. All the pumps at Pumping station were operated during the 2024 heavy storm event (1 in 100 year).
5	The proponent shall ensure cleaning of storm water drains at least three times a year. (i) First, the process must start by 31 March each year. (ii) The drains should also be thoroughly cleaned after first heavy shower (iii) subsequently, after retreating of rain i.e., in the post monsoon.	The cleaning of the storm water drains will ensured and compliance will be submitted at appropriate stage of the project.
6	Proponent shall ensure construction of rainwater harvesting structures and also promote rainwater storage and use system by considering heavy rains in the area. Proponent shall make these as mandatory by incorporating in the Bye-laws of APCRDA & CA.	The interlinked projects have been planned with the rain water harvesting system and storage tanks. The details of the execution will be submitted post execution. The construction of RWH structure is made mandatory as per the Amaravati zoning regulations. Refer Annexure 4 – See sec 606 of Amaravati Zoning regulations.
7	Water pumping system and sewage conveyance and treatment systems are energy intensive and as such the proponent shall follow Bureau of Energy Efficiency Norms.	The Condition of EC is complied and provisions are made in the tender documents. LT pumps selected for clear water pumping and distribution system are of IE3-rated, in compliance with the norms set by the Bureau of Energy Efficiency (BEE). The HT pumps used for clear water pumping,

S. NO.	EC CONDITION	COMPLIANCE STATUS
		as well as the raw water pumps installed at the intake well and WTP are based on the 3D (Demand Driven Discharge) concept. These pumps operate according to the actual demand, ensuring optimized performance. Their operation is regulated by energy-efficient devices such as Variable Frequency Drives (VFDs), which help in controlling the pump speed and reducing energy consumption. VFD systems are used in Sewerage infrastructure. The BoQ for the STP is enclosed in Annexure 5 (see pg 8,12) and the reply from the ADCL on the Water supply systems is enclosed in the Annexure 6 (see pg 2). Appropriate O&M will ensure minimum electrical energy usage in pumping of raw water from the Intake Well, raw water transmission main, various treatment processes in WTP, clear water pumping station, clear water transmission main and in water distribution system through WDCs to the users.
8	Proponent shall encourage low flow plumbing efficient fixtures, sensors, auto valves, pressures reducing devices including for toilets, faucet aerators and shower heads to conserve the water. Proponent shall incorporate these	Amendment of Amaravati Zoning Regulations by incorporating of EC conditions and NGT conditions is completed.. see Annexure 7.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	guidelines in the Bye-laws.	
9	The proponent shall ensure 100% collection of sewage by covering entire area of the city with modern underground sewerage network. The proponent shall treat entire (100%) waste water of 877 MLD (year 2050) in the proposed Five Sewage Treatment Plants and one dedicated Industrial Waste Water Treatment Plant to the International Municipal Sewage reuse standards of BOD ≤ 10 mg/l, COD ≤ 10 mg/l, Total Suspended Solids (TSS) ≤ 10 mg/l, Residual Chlorine ≤ 1MG/l and Faecal Coli /100 ML – No detectable levels as committed in EIA report. The proponent shall recycle 100% of treated sewage for non-potable applications like flushing, gardening, road and vehicle cleaning, HVAC, fire protection, construction activities, industrial applications by laying dedicated pipeline for supply of treated grey water as committed in the EIA report. The proponent shall construct treated sewage storage ponds of adequate capacity with HDPE liner to store treated sewage during rainy season as committed. The proponent shall lay dual piping at street level shall be laid out in service ducts with 24 ×7 water supply provision by ensuring pressure in the main water supply network is always maintained	The total wastewater generation for the year 2050 is projected to be 681 MLD, and land for treatment plants of sufficient capacity has been allocated in the capital city. The STPs will be developed on modular basis to treat this quantity. Sewage collection system has been planned for the entire Capital City area, the city is divided into thirteen sewerage zones, each serviced by 1 sewage treatment plant. In the tender documents, the recommended norms of treated sewage quality by MoHUA dtd 18.12.2023 or CPHEEO (Revised table 7.19 of the Manual on Sewerage and Sewage treatment) are included for treatment of Sewage. Tertiary treatment systems included in the BoQ with BoD <5 mg/l. See pg 11-13 of 30 in Annexure 5. It is planned to reuse the treated waste water for various applications like flushing, greenery, District cooling systems and other applications as required. Dedicated Underground water supply and reuse lines are laid and it will be ensured that sufficient pressure is maintained in the main water supply network.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	at least twice of the pressure in dual pipe carrying treated waste water to avoid contamination of the fresh water.	
10	The proponent shall construct Sewage Treatment Plant of capacity 216 MLD in the 1st phase and reuse 114 MLD for green belt development and Horticulture and 102 MLD for flushing, construction activities, HVAC requirements, road washings, emergency fire fighting, industrial applications etc., as committed. The proponent shall also construct 3500 MLD treated sewage storage pond for storage of treated sewage in the rainy season as committed. The proponent shall undertake construction of Sewage Treatment Plant simultaneously with the construction of the city.	The tenders for the construction of the STPs catering the sewage demand from 12 LPS zones (of total 13 zones) for a capacity of 282 MLD are finalized . It is planned to construct STPs with a capacity of ~330 MLD and with increase in population the STPs capacity will be increased for the ultimate design population. It is proposed to reuse the treated waste water for various applications in the capital city. Reuse lines along the roads for distribution of the treated waste water to the greenery areas and other applications are part of the BoQs.
11	The proponent shall provide continuous online water quality monitoring facilities for WTPs, STPs and upstream of drinking water source at Krishna River. Results of monitoring shall be linked to SPCB / CPCB website.	Online River Water Quality System is commissioned on upstream of River Krishna and is connected to APPCB and CPCB server. The city level STPs and WTPs will be monitored using SCADA system and it is included in the BoQs. see pg 12 of 30 in Annexure 5 and pg 2 of 9 in Annexure 6. The Scada systems will be connected to the SPCB/CPCB website. The compliance will be submitted post execution.

S. NO.	EC CONDITION	COMPLIANCE STATUS
12	All roads should have rain water drains connected separately (from the sewage network) to the treatment facility of the zone.	All the roads have been planned with separate UG storm water network and the storm water is proposed to be released into the proposed reservoirs or the existing natural drains. For efficient drainage from the city the outlets are above the HFL of the canals.
13	Appropriate sites be identified and selected for establishing the STPs for different zones, and the proponent shall reserve the area within 200 m from the STPs, as no habitation vegetation zone and may use for establishing waste recycling or processing or handling facilities for the respective zone.	Sites for the STPs are identified and the area around the STPs for handling waste recycling or processing will be examined case to case basis and compliance will be submitted.
14	Water quality of all the surface water bodies, including the storm water drains be monitored during pre-monsoon and post-monsoon seasons, for their management purposes and the report is submitted as compliance.	During construction stage, Water quality monitoring of surface water is included in the tender documents of all works on quarterly basis. Monitoring includes pre construction and construction stage. Refer Annexure 9 pg 126 of Standard bid document. Post completion of the capital city works, the monitoring of the water bodies will be done and reported. Online River monitoring station upstream of Prakasam Barrage is connected to APPCB website and CPCB website.
15	The proponent shall prepare water footprint and carry	Water footprint will be prepared and Water Audit will

S. NO.	EC CONDITION	COMPLIANCE STATUS
	auditing every year.	be carried out as part of the Operation and Maintenance measures proposed for the system. The compliance will be submitted.

AIR ENVIRONMENT

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The proponent shall give priority for walking, cycling and integrated public transport system for laying of the roads and usage of cleaner fuels and plying of fuel-efficient vehicles on the road.	1. The elements of walking, cycling, public transport were well planned and spread over in the city as per notified Master Plan. 2. Walking, Cycling: Dedicated space is part of the design of all Trunk (Arterial, Sub arterial) and LPS roads (Collector streets). 3. Public Transportation (PT): Sub- Arterial roads are provided with dedicated PT corridor and ordinary PT system will ply on Arterial Roads. Preference will be given for Electric vehicles in the public transportation system in the capital city. Consultant has been engaged to prepare a typical plan and sections with the details of necessary EV charging infrastructure along with Bill of Quantities, Cost estimate to accommodate minimum 2 to 3 EV charging stations at one location. With reference to Arterial Roads, EV charging infrastructure will be installed on either side of the carriageway by creating a lay bye to the main carriageway with facilitation for EV charging infrastructure for various vehicles such as Bus, Car and Two Wheelers etc. In the interlinked building projects of the Capital city – i.e., Interim Government

S. NO.	EC CONDITION	COMPLIANCE STATUS
		Complex (IGC), battery operated vehicles are being used within the premises. It is proposed to install EV charging provisions in the building project complex taken up by APCRDA.
2	Proponent shall construct a continuous unobstructed foot path on each side of all streets with ROW wider than 12 mtrs. Minimum width of footpath shall be 2 mtrs. In addition to space for trees/greenery/vending spaces and surface utilities. Width of footpath shall be determined based on pedestrian volume and have to be wider than 2m wherever required. Intermittent buffers, bollards and other physical elements should be used to protect foot paths from encroachment by motor vehicle parking. At least 125 trees per kilometre length of footpath on the streets shall be ensured. Spacing of trees at no place should be greater than 12 m except at intersections. On streets with ROW of 18 m or less, if pedestrian traffic is greater than 8000 per hour in both directions together, the entire ROW should be notified for pedestrianization. Footpath Elevation over the carriage way at all times should be less than 150 mm. All pedestrian facilities should be barrier free for universal access by all persons with reduced mobility including those with hearing	The details of roads as per design and tenders are as follows- The minimum ROW of 12 m with foot path, cycling tracks and avenues on both sides are designed and spread all over the city. Footpaths: Proposed on all the Trunk and LPS roads with width ranging between 1.8m on both sides of 12 m road to 3 m on both sides of 50 m road. See pg 12-15 of Annexure 8 for cross sections in LPS roads See pg 8 of Annexure 6 Trees per Km.: Spacing of the trees will be as per the standards for different road widths. Speeds on roads: The city roads were planned by following the Urban road hierarchy system and designed by adopting the best national, International standards/practices. Road safety elements are included will be developed under the street furniture item. See Annexure 1. Few of the Arterial, Sub Arterial, Collector and Local road construction works are

S. NO.	EC CONDITION	COMPLIANCE STATUS
	and visual impairments. At least 5 safe street-level crossing opportunities per kilometre of street with 250m being maximum spacing between two crossings shall be ensured. Depending on context, these crossings may be signalized and / or traffic calmed (through raising crosswalk over street level by 150 mm) to reduce vehicular speed. Limiting speed on urban arterial roads and sub-arterial streets to 50 kmph and on collector and local streets to 30 kmph shall be ensured. Traffic calming of all streets with ROW of 12m or less through narrowing of driveway and meandering path with use of trees, islands and street furniture should be done and speed should be limited to 20 km/hr by design. Highways within urban areas should be avoided since they disrupt pedestrian activity and disconnect neighbourhoods. Vending spaces should be marked in addition and adjacent to the walking path, especially along high pedestrian volume areas to activate the street and make it safe. Space to be planned for utilities including drinking water kiosks and toilets so that the walking space is enhanced but not compromised.	awarded and reached some progress till 2019 and later during 2019 June to 2014 works were halted. Now, in 2025 the works have re-commenced. Roads with the footpaths, cycle tracks, street poles, street furniture, avenues, UG ducts for electrical, Sewer lines, reuse lines, ICT, Water supply, Gas lines are part of the tenders. Total Collector roads length is ~1280 Km and Total Arterial and Sub Arterial roads length is ~320 km. The major road classes of Master Plan were designed with recommended speed limits along with proper safety measures. All other conditions will be considered see Design basis report of a LPS zone is enclosed in Annexure 8.
3	Proponent shall - Construct dedicated and physically segregated	1. With a vision and objective to encourage Non-Motorized Transport (NMT) in the city, required infrastructure is

S. NO.	EC CONDITION	COMPLIANCE STATUS
	bicycle tracks with width of 2m or more, one in each direction on all streets with total motor vehicle carriageway larger than 10 m (not ROW) after providing adequately sized footpaths in each direction based on pedestrian traffic. - Develop at least 5 safe street crossings per km for bicycles with spacing between two crossings not more than 250m. - Provide secure parking for cycles at transit stations, all public places and commercial and institutional buildings. - Promote and implement public sharing schemes.	planned in the notified Master Plan. A dedicated NMT corridor all along the trunk and LPS roads were proposed in the master plan. The Right of Way (RoW) created for NMT will encourage and generate awareness among citizens about the bicycle activity. In context of maintaining the safety of cyclists and create environment friendly transport system these segregated bicycle tracks were planned. 2. Based on the IRC and other international standards, road and street crossing designs such as Table ops, Pelican signals, zebra crossings, etc. and bollards restricting the vehicles entering Pedestrian and Cycle tracks are included in the BoQs. 3. APCRDA has taken up developing the pre-feasibility analysis study for Public Bike Sharing (PBS) system in Amaravati along with Vijayawada and Guntur with World Research Institute (WRI). 4. Bike sharing System size, Bike Station location Plan, infrastructure requirement, implementation plan, awareness & advocacy training programs, etc. will be taken up as per the recommendations at appropriate stage of the city development and will be

S. NO.	EC CONDITION	COMPLIANCE STATUS
		reported.
4	Proponent shall design streets with emphasis on Pedestrian and cyclist safety, comfort and convenience. Proponent shall establish a dedicated unit for planning and auditing of Non-Motorized Transport (NMT) facility. Area of blocks surrounded by public access pedestrian / cyclist streets or pathways shall not exceed 2 Ha. No development shall be permitted until local street grid is put in the place which subdivides land into blocks of no more than 2 Ha.	All the streets are designed considering safety, comfort and convenience for the pedestrians and cyclists. Area of blocks surrounded by public access pedestrian / cyclist streets or pathways shall not exceeded 2 Ha.
5	Proponent shall develop high quality and high frequency rapid public transport system with dedicated lines for bus rapid transit system. All public facilities (institutional / educational / cultural etc.) should be accessible by public transport within 400m walking distance.	1. Grid pattern network of roads is planned in the city. The distance between any two major roads (Arterial/Sub-Arterial) in the city is 1km. All the sub-arterial roads were provided with dedicated PT corridor and ordinary PT system will ply on arterial roads. The Arterial and Sub- Arterial roads were planned one adjacent to another. This will create an access to citizen for Public Transportation system within 400m walking distance. 2. Each Community Centre is within 5 minute walking distance for any resident, and public transport node is within 10-minute walking distance.
6	The proponent shall encourage	Battery operated vehicles will

S. NO.	EC CONDITION	COMPLIANCE STATUS
	battery operated vehicles by providing separate lane with a provision for recharging.	be encouraged and details of provision of lay bye and recharging facilities will be submitted.
7	On making available of cleaner fuels like LPG/CNG, the proponent shall ensure plying of only CNG/LPG fuelled public transport vehicles like buses, taxis, autos on the road. Proponent shall also ensure that vehicle beyond 15 years of age shall not ply in the city. Proponent shall also encourage usage of low sulphur diesel and unleaded petrol by vehicles. Proponent shall ensure plying of latest emission compliant vehicles only on road.	Measures will be taken to comply with the condition. Necessary controls will be brought to ensure that Low sulphur diesel and unleaded petrol are used by the vehicles. The compliance details will be submitted.
8	The proponent shall encourage environmental friendly modes of transport like public transport and non motorized transport and discourage usage of personal cars by devising disincentives for private car use, in the form of both spatial (like parking control) and physical (like levies on car, fuels, congesting charges).	The design of the city roads considered public transport system and about 150 km of dedicated corridor for public transportation network is identified. Designated commercial areas are connected with public transportation in the master plan. Policy for discouraging the use of personal vehicles and promotion of public transport at appropriate stage of the city development will be submitted.
9	The proponent shall provide adequate parking facilities by giving priority to public vehicles and non motorized transport vehicles.	For all the projects it is ensured that parking spaces are provided as per the NBC norms/ZR norms.

S. NO.	EC CONDITION	COMPLIANCE STATUS
10	The proponent shall ensure that all utility lines (electricity, telephone, cable, water supply, sewerage, drainage etc.) shall be laid below the ground. Duct shall be provided along and across the roads to lay the utility lines. Major trunk (water/sewerage) lines are to be laid along the utility corridor.	With an objective to make Amaravati as a dig free city, the Infrastructure Master plan has recommended to develop Utility Corridor all along Trunk and LPS roads placed on either sides of the carriageway below the ground. **See pg 12-15 of Annexure 8 for cross sections in LPS roads** **See pg 8 of Annexure 6**
11	The proponent shall ensure that DG sets shall comply with noise and emission norms prescribed by MoEF&CC in Environment (Protection) Rules.	The DG sets approved by authorised agencies will be installed and monitoring results of the Noise and Air emissions of the DG sets will be submitted. During construction stage, Monitoring of Noise and Air emissions is included in the tender documents. **See pg 127 standard bid document enclosed in Annexure 9.** In the tender documents, it is recommended to use CNG genset, Solar based sources in all practicable cases and to use DG sets as a last option. It will be ensured that stack of minimum height is installed to prevent the ground level emissions. **See pg 129 of standard bid document enclosed in Annexure 9** A condition is incorporated in the Amaravati zoning Regulations stating that only Approved DG sets shall be installed. **See Annexure 7**

S. NO.	EC CONDITION	COMPLIANCE STATUS
12	The proponent shall ensure development and meeting of not less than 10% of energy needs from the renewable energy sources like Solar, Wind, WTE, Biomass etc. To meet the demands of the Capital City, at least 120 MW of solar power with investment to the tune of RS.500 Crores and wind power with investment of Rs.100 Crores in the 1st phase shall be taken up as committed.	Roof top solar is included in BoQs of all Housing and Office building in AGC area. Roof top solar is mandated in the Amaravati Zoning Regulations for all buildings except for residential buildings less than 300 sqm plot area. **See Annexure 7.** The enforcement of the roof top solar at plot level will significantly contribute to achieve the 10% of total city energy needs from renewable. The decision on the establishment of the Large scale renewable energy based parks/plants will be submitted.
13	The proponent shall ensure installation of solar panels by all buildings by allocating at least 1/3 of roof top for this purpose. This is in addition to installation of solar heaters. The proponent shall incorporate these guidelines in Bye-laws.	The condition related to solar water heating and solar lighting is already mandated in Amaravati zoning regulations. **see Annexure 7.** All the proposed interlinked projects are planned to develop with Roof top solar plants. Roof top solar is included in the BoQs of the building projects. **See pg 167 of 184 of a BoQ of interlinked building projects in AGC area, enclosed in Annexure 2.** Solar water heaters are also included in the building projects. **See pg 129 of 184 of a BoQ of interlinked building projects in AGC area, enclosed in Annexure 2.** In the Interim Government

S. NO.	EC CONDITION	COMPLIANCE STATUS
		Complex two solar trees of total capacity 20.8 KW are installed. Installation of the Roof top solar plant on all the buildings in the IGC is also completed with a total capacity of 842.5 Kw. 60 Kw Roof top solar plant is under operation in High court. Further, a 22 kw capacity plant is installed and to be brought into operation. Roof top solar has been installed by the Universities in Amaravati.
14	The proponent shall incorporate energy efficiency guidelines (Energy Conservation Building Code) and Green Building Concepts (GRIHA/IGBC/LEED) in the Bye-laws. Buildings shall utilize natural lighting and ventilation to the maximum extent. All point light sources shall be CFL or LEDs or equivalent. All linear light sources shall be T-5 or at least 4* BEE rated TFLs or equivalent. The distributed cooling system shall be at least BEE 3* rated products. All the major buildings having connected load of more than 100 KW shall maintain power factor of above 0.95. All multi story residential apartment / complexes shall meet at least 15% of total external lighting load through renewable energy sources and all commercial, institutional, industrial and mixed use buildings shall meet	Green building norms, ECBC are mandated for the buildings in the capital city. The condition is incorporated in the Amravati Zoning regulations. **See Annexure 7.** The condition is included in the building permission process **see pg 5 of a building permit order in capital city enclosed in Annexure 10.** The interlinked building projects designs have included the green building and ECBC norms in the BoQs and is targeted for Green certification. BEE minimum 3 star rated to 5 star rated products, Roof top solar and its connectivity to the external lighting load, water heaters, LEDs and other green building norms, power factor are considered in the designs and BoQs.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	at least 5% of the total lighting loads through the renewable energy sources. All residential buildings having plot area of more than 500 Sq.mtrs, multi story residential apartments / complexes, hotels and banquette halls, hospitals, all government buildings, residential schools, educational institutes, hostels and industries requiring hot water shall install solar water heating systems to meet at least 20% of hot water requirement. 24 hours use buildings like hospitals, hotels, call centers, shall ensure that thermal performance of external walls and roof shall conform to ECBC 2007 requirements i.e., maximum U-factor (W/m^2K) of 0.44 and 0.261 respectively and for day time use buildings U-factor of 0.44 and 0.409 respectively. U-factor for windows shall not be more than 3.30. All major buildings land complexes shall meet Energy Performance Index of less than 150kWh/Sq.m per year. All commercial buildings with connected load of 100kW and above shall invariably comply with energy conservation building code. All the Capital complexes, Commercial, institutional and major residential complexes should be constructed following Green Building concepts and ensure – energy efficiency, low carbon foot-print, resources conservation etc. The proponent shall	

S. NO.	EC CONDITION	COMPLIANCE STATUS
	ensure that all the bulk consumers of the energy, shall meet a greater part of their demand through renewable energies and avoid use of fossil fuels; The proponent shall incorporate these in Bye-laws.	
15	The proponent shall establish minimum 3 online continuous Ambient Air Quality Stations in three zones i.e., residential, commercial and business zones and connect the results to CPCB / SPCB website in the 1st phase. Permanent Online Air Monitoring Stations for Air Quality be established, one for every 25 km2 of area, located strategically considering the wind rose of the area and terrain conditions.	One station is installed by APPCB at Interim Govt. Complex, Velagapudi, and connected to CPCB. 3 manual stations will be installed with the support from the APPCB and CPCB under the NAMP. The proposed locations in the capital city are at Thullur PHC, Yerrabalem Sub centre and SRM University.
16	The project proponent should develop mechanism for monitoring Carbon sequestration from the plantations made and should achieve a Mean Annual Increment of the Carbon stock of at least 5 tons/Ha/annum. The proponent should monitor the carbon stock of each area, at least once in two years and submit reports.	Carbon stock and sequestration calculations have been completed till 2025 February. Further, a planned program for greening will be adopted as per the suggestions of climate action plan for city and accordingly carbon stock and sequestration will be monitored and reported. Climate action plan final report is submitted. ICLEI (International council for local environment Initiatives) engaged for preparation of climate action plan and carbon sequestration through plantation is part of the final report. **See Action points in Annexure 11.**

S. NO.	EC CONDITION	COMPLIANCE STATUS
17	The proponent shall prepare carbon footprint for the city and strive for carbon neutrality.	Earlier, M/s TERI has been entrusted with the task of preparing climate change action plan for the Amaravati capital city and the carbon sequestration is part of the Action plan. The work was halted during 2019 -2024. ICLEI has been engaged for preparation of climate action plan.The final report is submitted. Strategies for carbon neutrality is part of the Report. The final report was prepared after consulting with stakeholders and is now aligned with the State Action Plan on Climate Change, as advised by the Member-cum-Nodal Officer. It has been submitted for IC and SC members for review. It was shared on 18 Nov 2025. **See Annexure 11.** Necessary actions in this regard are yet to be initiated and the details will be submitted.

SOLID WASTE MANAGEMENT

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The proponent shall ensure that occupiers of all premises to keep two receptacles, one for the storage of food / organic / biodegradable waste and another for non	The Households in the Existing settlements have been distributed with two bins for the wet and dry waste. Households are supplied with 2 dustbins and Bins have also been distributed

S. NO.	EC CONDITION	COMPLIANCE STATUS
	biodegradable / recyclable and other types of solid waste generated. Hazardous waste generated by households shall be kept separately in suitable container as and when such a waste is generated.	to the commercial establishments in all the villages. HHs are segregating waste at the source level and awareness is being done regarding source level segregation of the wet and dry waste separately.
2	The project proponent shall ensure that all the newly developed areas shall not have any open waste disposal sites on the road sides and develop efficient waste collection mechanism that ensures segregation at the origin level only.	Suitable no. of the collection vehicles and manpower for Door-to-Door waste collection are engaged to prevent open waste disposal. Further, dumper bins are placed in the major streets to temporarily store the door to door collected wastes and later for collection by compactors for transportation to the waste to energy plant.
3	Proponent shall arrange for door to door collection and / or community bin collection of domestic waste; trade and institutional waste stored by the waste generators in segregated manner.	Door to Door collection in all the villages is already in practice. Cube bio energy pvt ltd has been engaged.
4	Proponent shall identity and allocate suitable pieces of land in the jurisdiction of the city to facilitate sorting of various components of recyclable material collected by waste collectors and prevent such activities being carried out on the foot paths / road side etc.	The condition will be complied at appropriate stage with city growth and actions taken in this regard will be submitted.
5	The proponent shall identify and allocate adequate land	The condition will be complied at appropriate stage with city

S. NO.	EC CONDITION	COMPLIANCE STATUS
	for Multiple Transfer Stations with mechanical Material Recovery Facility for secondary segregation and storage of dry waste as committed. Transfer Stations shall be properly covered and hygienically maintained to minimize Environmental and Health Hazards.	growth and actions taken in this regard will be submitted. Currently, the waste is being transported to the waste to energy plant in Naidupet, Guntur**. See Annexure 18.** The condition will be complied and actions taken in this regard will be submitted.
6	The proponent shall ensure daily sweeping of all public streets and periodical cleaning of all public places.	The street sweeping is being done in the settlements and the condition is complied.
7	The proponent shall make arrangements for separate collection of construction and demolition waste and shall be transferred to Construction and Demolition Waste Recycling Facility. Proponent shall allocate adequate and suitable land for establishment of Construction and Demolition Waste Recycling Facilities.	The condition will be complied. As per the C & D waste management guidelines, portions of the C & D waste will be used in filling the low lying areas of the city and levelling of the land. Conditions are included in the ESMP/SoP of the tender documents of the capital city contract works i.e. - In the construction phase, all the contractors shall store the C & D wastes in the segregated forms within the project sites and shall be disposed as directed by the APCRDA. **See pg 47 of SoP enclosed in Annexure 12.** The APCRDA is in process of entering MoU with the existing C & D plant operator in Vijayawada. Transfer stations will be established in the city. The C & D waste from the city will be lifted by the C & D plant operator.

S. NO.	EC CONDITION	COMPLIANCE STATUS
		Actions taken will be submitted.
8	The proponent shall ensure that a separate adequate space for segregation / storage and decentralized processing of solid waste is demarcated in the plan for group housing or commercial/ institutional or any non residential complex exceeding 200 dwellings or having a plot area of more than 10000 Sq.mtrs.	Adequate space for onsite waste management is considered in the interlinked building projects and compliance will be submitted post execution. Organic waste composters are considered in the BoQs. The condition is incorporated in Amaravati zoning regulations and buildings permission orders. **See pg 5 of the building permit order issued for a development in capital city enclosed in Annexure 10.** **See Annexure 7 for the Amaravati zoning regulations amendment.**
9	The proponent shall ensure collection of waste from vegetable, fruit, meat and fish markets on daily basis and promote setting up of de-centralized compost plant or bio methanisation plant at suitable location in the market.	The establishment of the decentralized compost plant/ bio-methanation plants in the market locations will be promoted and dealt case to case basis. The compliance details will be submitted.
10	The proponent shall ensure establishment of modern abattoirs (slaughter houses) with appropriate waste management facilities. The proponent shall also take measures for establishment of Rendering Plant for disposal of carcass or parts of any dead animal in scientific manner.	The existing abattoir located in the adjacent and contiguous area to the capital city they are Mangalgiri or Vijayawada will be utilised. Decision on the identification of Land for Modern abattoir will be reported.
11	The proponent shall allocate suitable and adequate site for setting up of Common Bio	As per the biomedical waste management guidelines, the facilities within 75 km shall be

S. NO.	EC CONDITION	COMPLIANCE STATUS
	Medical Waste Treatment and Disposal Facility within the city limits.	utilised and CBMWT facility in the Chinnakakani will be used for the disposal of the bio medical wastes. The plant is not operated to its full capacity. If the existing plant reaches its full capacity and, in the future, major hospitals that come up in Amaravati will be asked to develop suitable biomedical waste management facilities within their premises. Handing over of the biomedical wastes by the waste generator to the authorised dealer is incorporated in the building permit procedures. **See pg 5 of the building permit order issued for a development in capital city enclosed in Annexure 10**
12	Proponent shall make arrangement for setting up of Waste Collection Centers for plastic waste in association with plastic manufacturers. The Proponent shall also ensure safe collection, storage, segregation and transportation, processing and disposal of plastic waste in environmentally sound manner. The proponent shall allocate suitable and adequate site for setting up of plastic recycling, processing and disposal facilities.	It will be complied. The actions taken will be submitted.
13	The proponent shall facilitate setting up of E-waste Collection Centers by the producers and channelize e-	Waste collection centres will be established at appropriate locations. It will be complied. The actions taken will be

S. NO.	EC CONDITION	COMPLIANCE STATUS
	waste to recyclers or dismantlers. The proponent shall allocate suitable and adequate site for setting up of e-waste recycling / dismantling facilities.	submitted.
14	The proponent shall identify and allocate suitable site for establishment of common Hazardous Waste Treatment and Disposal Facility.	It is proposed to develop only non-polluting industries and therefore the facility establishment will be considered on the need basis. The domestic waste collected from the city is transported to the waste to energy plant in Naidupet, Guntur. The technology at WTE, Naidupet accepts the mixed type of wastes.
15	The proponent shall facilitate establishment of used battery Collection Centers by manufactures / importers / assemblers / reconditioners and canalize the used batteries to registered recyclers. Proponent shall allocate suitable site for setting up of used battery recycling facilities.	In the interlinked building projects under operation, buy back arrangements are done. Used batteries are classified as hazardous waste and shall be handled as per rules. The actions taken will be submitted.
16	Proponent shall ensure proper collection and scientific disposal of sludge from the water treatment plants, sewage treatment plants, water seal latrines and septic tanks.	Co treatment facilities for the sludge are included in the STP works. As an interim measure, the septage from the existing settlements is transported to the 20 MLD STP located in Ramalingeswar nagar STP.
17	Proponent shall take measures for proper collection and scientific disposal of bulky waste like discarded tables, chairs, cots,	Transfer Station will be suitably designed with special arrangements to handle bulky objects. Actions taken will be submitted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	cub boards, mattresses, gas cookers, microwave ovens, washing machines etc.	
18	Proponent shall take measures for establishment of state of art modern Integrated Solid Waste Management Facility for the city as committed consisting of Sorting / Material Recovery Plant, Compost Plant / Anaerobic Digesters, Waste to Energy Plant, Construction and Demolition Waste Recycling Plant, Bio medical Waste Facility, Plastic Waste Processing and Recycling Facility and Engineered Landfill Facility. Proponent shall allocate suitable and adequate space for ISWMF in the city limits and ensure establishment of ISWMF simultaneously with the construction of the city in the first phase itself.	Currently, the waste from the existing settlements is being collected and transported to the waste to energy plant located in Naidupet, Guntur which was constructed a regional facility to cater to the waste management from few ULBs in erstwhile Guntur and Krishna districts**. See Annexure 18.** Suitable site has been allocated within the capital city and the development of the ISWMF will be done at appropriate stage of city development. During the construction stage, conditions for the management of waste by the contractors are included in the standard bid document and the SoP. **See pg 127 of Standard bid document enclosed in Annexure 9 and pg 47 of SoP enclosed in Annexure 12**
19	The proponent shall maintain adequate green buffer around Integrated Solid Waste Management Facility and Common Hazardous Waste Treatment and Disposal facility By carrying proper assessment, but not less than 100 m width.	Compliance will be submitted during design and execution of the ISWMF.
20	The proponent shall ensure usage of fly ash for levelling / reclamation of low lying areas, road embankments, for raising platforms in	Incorporated in Zonal Regulations, **See Annexure 7.** The usage of fly ash and its products in the constructions activities of interlinked projects

S. NO.	EC CONDITION	COMPLIANCE STATUS
	inundated areas, and usage of fly ash based products for construction purpose including fly ash bricks, PPC cement, Concrete etc., in compliance with Fly Ash Notification issued by the MoEF under Environment (Protection) Act. The proponent shall incorporate usage of fly ash by construction agencies in the Bye-laws.	is already under practice. AAC blocks are considered in the building project. **See pg 23-25 of 184 in BoQ of a building project in AGC area enclosed in Annexure 2.**

ECOLOGY

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	A list of all existing water bodies (including ponds, tanks, drains, irrigating channels) falling in the proposed area, shall be prepared village wise with survey no., extent, use and other details duly certified by a competent authority and a certified map of these water bodies as on project commencement date should be kept as base map with the APCRDA & CA, and should be displayed on its web site;	A Notified Master plan depicting the water bodies is displayed in the APCRDA website.
2	All construction activities by the proponent should ensure that the activities do not alter or do not adversely affect the water bodies and their ecology;	Condition is already included in Bid document. **See pg 104, 117, 149 of the standard bid document enclosed in Annexure 9**
3	Improvement or rehabilitation of existing natural streams, channels / nallas shall be	The existing channels are being improved to make the city a flood resilient city.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	carried out without disturbing the ecological habitat.	All the streams will be developed with 30 m green buffer on both sides and 20 m green buffer both sides of gravity canal. The green buffer will be developed with nature based solutions and this will enhance the biodiversity and ecological functions in the area. The compliance will be submitted.
4	No untreated or treated wastewater shall be discharged in any of the water bodies including Krishna River under any circumstances.	All waste water will be treated and reused for various applications in the capital city. Zonal level STPs are planned to treat the entire city sewage and tenders will be notified. Building level STPs are functional in the exiting operation al buildings. In the interlinked projects under construction STPs are included. Suitable nature based solution will be developed for the in-situ treatment of the drainage released from the existing villages before draining it into the water bodies. Compliance will be submitted. Budget for the infrastructure upgradation in the existing villages has been sanctioned by the government and the works include water supply, storm water drains, sewerage, roads and street lighting. The infrastructure will be integrated with the city infrastructure.
5	The proponent shall create primary green spaces of 7200 Ha. Consisting of city parks, lake parks, town parks,	As per the master plan ~30% of the area is under Blue and Green spaces Some of the water bodies such

S. NO.	EC CONDITION	COMPLIANCE STATUS
	neighbourhood parks as committed. The proponent shall create primary green space of 3924.57 Ha in the 1st phase as committed.	as Thullur tank, Venkatapalem tank have already been developed with greenery and converted into public spaces. Development of water tanks in other villages will be taken up in phased manner. The ADCL which is an implementing agency of few capital city works is looking after greenery development in the capital city. **Proposed Greenery development details are enclosed in the Annexure 6.**
6	The proponent shall create and maintain secondary green space of 1910 Ha. Weave through the townships connecting the various town and neighbourhood parks acting as a passive recreation places, interactive jogging trails and Non Motorized Transport corridors across the city. The proponent shall create secondary green space of 510.04 Ha in the 1st phase as committed.	Secondary green spaces are provided in the LPS layouts and will be developed as part of LPS development works. The Avenue plantation are planned along LPS streets and arterial roads. **See pg 8 of LPS -BoQ enclosed in Annexure 17.** **See Annexure 6 for tree plantation proposed along trunk roads.** Further, buffer plantation along the canals will be developed. The total tree length will be 4000 km with varying widths of the roads and canals. Tree plantation during construction stage will be developed in the labour camps, in the existing villages. It is included in the ESMP/SoP as condition for the prevention of impacts due to construction works.
7	The proponent shall protect and conserve the existing	Existing Water bodies have been protected. 3 more reservoirs at

S. NO.	EC CONDITION	COMPLIANCE STATUS
	water bodies of 4815 Ha. In addition to creating new water bodies integrated with green spaces as committed.	Krishnayapalem, Neerukonda and Sakhamuru are being developed to store up to 0.53TMC of flood water. The areas around the water bodies will be developed with green spaces. Compliance will be submitted.
8	A buffer of 30m on either side of canals and streams; 50m around water bodies and 100m along the Krishna River Front shall be reserved as greenbelt without allowing any development. Plantation along the side of the roads and in the open spaces shall be developed to act as sinks of air pollutants.	It is proposed to develop the greenery all along the natural drains of Kondaveeti vaagu, Pala vaagu and gravity canal. All the streams will be developed with 30 m green buffer on both sides and 20 m green buffer both sides of gravity canal. The tenders of the works are being notified. Suitable species will be selected.
9	The proponent shall encourage urban agriculture to meet the city food requirements and reserve high value agriculture land wherever possible for this purpose as committed.	As per City Zoning Regulations, urban agriculture is not allowed. However, few of the Secondary green spaces/green spaces in the Universities/ Housing complex will be used for encouraging urban agriculture.
10	The proponent shall utilize natural features such as forest and hills to create regional green network as committed.	Actions taken in this regard will be submitted.
11	The proponent shall utilize reserve forest land of 251.814 hectares, after obtaining approval for diversion from competent authorities for development of green belt / eco friendly activities only.	The 251 hectares of the forest land will be preserved as green lungs and will not be diverted for non-forestry uses or even for uses like parks or recreational activities to preserve its natural characteristics.

S. NO.	EC CONDITION	COMPLIANCE STATUS
		The reserve forest is designated as P3 protected zone in the capital city master plan. (See sec 404.3 of Amaravati zoning regulations enclosed in Annexure 4) and the definition of P3 is given below. "P3 zoning districts have been established to conserve and protect the environmentally sensitive areas such as steep slopes and rivers which are rich in nature and biodiversity. These areas are non-developable for other strategic purposes. In the case of highly sensitive areas like forests and rivers the zoning for the protected areas shall supersede."
12	The proponent shall utilize treated sewage water for irrigation of primary and secondary green areas by laying pipeline network.	Dedicated reuse lines from the STP to the Avenues are part of the designs under the LPS works. The compliance will be submitted post execution of the works.
13	All archaeological, cultural and ecologically-sensitive areas (i.e. estuaries, mangroves, rocky shores, caves etc.) in and around the Amaravati capital city be adequately protected and conserved. The proponent shall take appropriate measures for protection of Undavalli caves. The proponent has to declare no development activity Zone of 100 to 300 mtrs around Undavalli caves as per ASI	100 m zone around the ASI site is protected. Further, the condition is incorporated in the Zoning Regulations.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	regulations.	
14	A comprehensive PRIMARY BASELINE DATA on the productivity of the Krishna River in the CRDA area (primary, secondary and tertiary productions), before and after Capital region development shall essentially be collected and processed in systematic and scientific way.	The work has been awarded to the firm VVN technologies. **See Annexure 13.** The inception report has been finalized, and the first round of seasonal data (July to September 2025) has been collected and report is submitted to APCRDA for review.
15	Development of the green belts, green corridors, avenue plantations etc., be made only with the native species with multiple uses, and the plantation should not affect the native species diversity and shall help enhance carbon stocks.	Greenery will be developed by selecting native species suitable to agro climatic zone of Guntur and Krishna district.
16	The proponent shall reserve most of the waterfront along the Krishna River for public use as committed.	The details of the Riverfront spaces reserved for public use will be submitted.
17	The proponent shall create 780 Ha recreational landscapes including Theme Parks, Golf Courts, Sports and Recreational Spaces.	The details will be submitted as and when planned and executed.
18	The proponent shall create green and blue network interconnecting all reservoirs, water bodies and green spines as committed.	Canals with green buffers, greenery around water bodies will be connected to the avenues on the street and the greenery on the hills and hillocks. Compliance will be submitted.
19	The proponent shall create	The details will be submitted as

S. NO.	EC CONDITION	COMPLIANCE STATUS
	network of water ways as committed to connect various eco tourism attractions on the cluster of islands in the river Krishna. These water ways have to inter connect Islands and mainland within the city.	and when planned and executed.
20	A major part of the development of the water bodies and green areas be completed before the end of the construction phase;	Actions are being initiated to develop water bodies and green areas. For details see **Annexure 6.**
21	All construction activities by the proponent should ensure that the activities do not adversely affect the water bodies and their ecology.	Conditions relevant to the protection of the water bodies are included in the bid document. See **pg 104, 117, 149 of the standard bid document enclosed in Annexure 9**
22	No natural water body shall be lined or no embankment shall be cemented except for protection and safety of the people in the surrounding area. The water bodies shall be kept in natural conditions without disturbing the ecological habitat.	The condition will be complied and if required only nature based solutions will be adopted and compliance will be submitted.
23	Improvement or rehabilitation of existing natural streams, channels / nallas shall be carried out without disturbing the ecological habitat.	Improvement of existing natural streams are being taken up only from flood management perspective and will be carried out without disturbing the ecological habitat.
24	Mitigation measures like providing adequate drainage, embankment consolidation and slope stabilization shall	The details of embankment consolidation and slope stabilization are given Annexure 14.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	be taken on the built up areas and along the city roads to avoid soil erosion. Top soils (30 cm) of the borrow pit sites shall be conserved and restored after completion of excavation. All the topsoil excavated during construction activities shall be stored for use in horticulture / landscape development within the project site. Proper erosion control and sediment control measures shall be adopted.	Top soil upto 30 cm depth and its preservation is mandated. **See pg 104 and 115 of the Standard bid document enclosed in Annexure 9.** **See pg 1 of LPS BoQ enclosed in Annexure 17.** Compliance will be submitted.
25	Recognizing the fact that the Capital City project is being proposed on the Green & Blue Concepts, as such to protect the environment, the 24.29% of the land allocation for greening and open spaces, be achieved at the Development zone wise as far as possible.	~ 30% of master plan area is dedicated for green and blue spaces.
26	Deep rooted large foliage plantation along the side of the roads and in the open spaces shall be developed to act as sinks of air pollutants.	It is proposed to develop plantation on road sides and open spaces with the deep rooted, large foliage sapling of trees. Native species will be planted to absorb air pollutants.

RESETTLEMENT AND REHABILITATION

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The APCRDA & CA shall submit the specific plans for the inclusion of the existing habitations in the capital area development and submit the details of the Project Affected Families and the RR Plans to address the PAFs. As far as possible, Least Dislocation Principle be adopted;	The existing settlements are not disturbed. Negotiated settlement policy is being adopted and successfully implemented. Very few HHs will be affected due to road alignment passing near to the settlement and those affected will be provided land site and fund for house construction within the village periphery. **See chapter 2 of the resettlement policy framework document of APCRDA enclosed in Annexure 15.**
2	The proponent shall develop a peripheral area development plan and provide plans for the compensation of the loss of rural productivity like loss of grazing areas for the livestock dependent communities; vegetable growing farmers and sellers etc.	The landless labourers are being provided with an initial pension of Rs 2500 per month per family for a period 10 years and now (from 2024 onwards) it is increased to Rs 5000 and extended by another 5 years. Skill training programs are planned and actions taken will be reported. Further, it is envisaged to developed greenery in village peripheral areas with tree species and grasses required for the livestock. The actions taken will be reported.

DISASTER MANAGEMENT

S. NO.	EC CONDITION	COMPLIANCE STATUS

1	The proponent shall prepare and implement proper flood management plan to overcome threats posed by the KondaveetiVagu and its tributaries, Krishna River, heavy rains (more than 1000 mm) and cyclones.	Flood management works are being taken up as per the flood management DPR prepared by the TCE and the Arcadis. One in 100year 24 hr return rainfall is considered and further climate change aspects are also considered in the design of the flood mitigation works. Flood forecasting and monitoring center and infrastructure will be developed as per the city level disaster management and resilience plan. Tender process completed and LoA will be issued to the firms Tarutium Global consulting in JV with Geoclimate risk solutions Pvt.Ltd.
2	The proponent shall prepare earthquake response management plan by considering the location of the city in the class III seismic zone. The proponent shall incorporate structural design requirements of buildings for Seismic Zone – III in the Bye-Laws.	Necessary provisions are incorporated in the Amaravati city bye laws (AZR) Se Annexure 7. Further, it is submitted that Government complex buildings design have considered the seismic zone requirements.
3	The proponent shall create adequate infrastructure for emergency fire fighting.	
4	The proponent shall prepare emergency Health Management Plan.	

ENVIRONMENT MANAGEMENT DURING CONSTRUCTION PHASE

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The proponent shall ensure safe and secure accommodation, clean drinking water, hygienic sanitation facilities like mobile toilets, community level gas supply, rest areas for female workers, nutrition development programme for workers at all construction sites for the projected work force of 5000 – 10000 spread in about 40 labour camps as committed in EIA report.	1. Contractors have been mandated to have onsite facilities/amenities as part of their contract. 2. Labour camps are ensured with adequate welfare and sanitary facilities, other basic amenities, safe working conditions on site, safe and secure accommodation required for the social development of the workers and all facilities are within the reach of the workers.
2	The proponent shall ensure following mitigation measures as committed, to minimize pollution problems during construction stage. • All the loose material either stacked or transported shall be provided with suitable covering such as tarpaulins etc. • Water sprinkling shall be done at the location where dust generation is anticipated. • Construction equipment be maintained and serviced regularly such that the gaseous emissions from these equipment are maintained within the design specifications. • Provision for insulating caps and aids at the exit of noise source on the machinery.	All these conditions are incorporated in the tender document. **See Annexure pg 101 to 130 in Standard bid document enclosed in Annexure 9.** The contractors of all the Amaravati Capital City Projects have been mandated to follow the conditions. The contractors will be monitored by project management consultant(PMC) with dedicated personnel for environment, safety. The contractors and PMCs are monitored by Program Management consultant (PgMC). PMCs and PgMC will ensure the compliance and report to the Environment Social Management Unit in APCRDA. Compliance will be submitted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	• The use of dampening materials such as thin rubber/ lead sheet for wrapping the work places like compressors, generator, etc. • Inlet and outlet mufflers shall be provided. • Earmuffs shall be provided to workers and enforced to be used by the workers. • Noise prone activities shall be restricted to the extent possible during the night time, in order to have minimum environmental impact on the workers as well as on the neighbourhood.	
3	Groundwater should not be used for any activities during the construction phase also; and a policy for the use of water by different users in the project area be developed for their sustainable use and submitted.	Ground water usage for the construction activities is not allowed in the tender document. **See Annexure pg 104 & 117 in Standard bid document enclosed in Annexure 9.** Surface water from River Krishna will be supplied from the existing water supply lines laid by the APCRDA. Actions taken in this regard will be submitted.

ENVIRONMENT MANAGEMENT MONITORING SYSTEM

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The responsibility of implementation of	As per the requirements of this condition Environment

	environmental safeguards rests fully on the project proponent. Project proponent shall establish an Environmental Management Regulatory Authority to carryout functions relating to environmental management under the supervision of a senior executive, directly reporting to the Project Proponent. It should have separate wings for (a) Greenery and Ecological Management; (b) Sewage Management; (c) Solid Waste Management; (d) Fly Ash Utilisation and (e) Pollution Control, staffed by Scientists / Engineers and supported by established laboratories and adequate supporting staff.	Management Regulatory Authority has been constituted under the chairmanship of Additional commissioner, APCRDA to carry out functions relating to environmental management. Now, ESMU has been constituted vide G.O MS NO 112 of MA & UD (CRDA.2) dtd 29.10.2024. All the functions of the EMRA are under the purview of the ESMU**. See Annexure 16.** ESMU convenes on regular basis.

GENERAL CONDITIONS

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	Any change(s) in the scope of the project, shall require a fresh appraisal by the SEIAA. As the details of the Inter Linked Projects for the Government Complexes, Housing Complexes, Cultural Centers, Industrial / IT Park, Commercial Complexes, Education Institutions etc.	As per the EC condition, as per the provisions of EIA notification 2006 the APCRDA has obtained Separate environmental clearance for the following projects **1. Interim Government Complex vide Order no:** SEIAA/AP/GNT/CON/01/2016/18 dt: 09.02.2016. **2. Group-D Staff Housing project vide Order no:** SEIAA/AP/GNT/CON/09/2017/417 dt:12.10.2017. **3. 2	The proponent	Compliance will be submitted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	shall incorporate penal provision in the byelaws/regulations for any violation of environmental issues. The proponent shall also create proper intuitional mechanism to ensure continual environmental awareness among all stakeholders.	
3	The proponent shall obtain consent from Andhra Pradesh Pollution Control Board.	Obtained CFE from APPCB vide Order no: 373/APPCB/CFE/RO-GNT/HO/2015 dt: 19.10.2015. CFE validity extension is issued with validity till 8.10.2026
4	The proponent shall strictly comply with Municipal solid waste (Management & Handling) Rules, the plastic manufacturer, sales & usage Rules, the Hazardous Waste (Management, Handling & Transboundary movement) Rules, Bio Medical Waste (Management and Handling) Rules, E-waste	Noted and actions taken will be reported.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	(Management & handling) Rules, the noise pollution (Regulation and Control) Rules, the Manufacture, Storage and Import of Hazardous Chemical Rules, Fly ash notification and standards notified by MoEF under Environment (Protection) Act, wherever applicable.	
5	The project proponent shall inform the public that the project has been accorded Environmental Clearance by SEIAA, AP and copies of clearance letters are available with the APPCB and may also be seen at website of SEIAA, AP at www.seiaa.ap.nic.in and at website of Ministry of Environment and Forest at http://envfor.nic.in. This shall be advertised within 7 days from the	Published in two local Newspapers one of which is vernacular languages dt: 16.10.2015 and forwarded the same to SEIAA, AP and MoEF & CC, Regional Office, Chennai.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	date of issue of clearance letter, at least in 2 local newspapers widely circulated, one of which shall be in the vernacular language of the locality concerned and a copy of the same forwarded to SEIAA AP and Regional Office, MoEF& CC, Chennai.	
6	The proponent shall obtain all other mandatory clearances from respective departments.	Noted and it will be complied.
7	The project proponent shall submit / upload half yearly reports on the status of compliance of the stipulated environmental clearance conditions including results of monitored data (both in hard copies as well as by e-mail) to the MoEF& CC, its Regional Office, Chennai, SEIAA, AP, Zonal Office	Submitting and uploading half yearly reports on the status of compliance of the stipulated environmental clearance conditions. From 2016 onwards and till date, 5 compliance reports were submitted and uploaded the same in APCRDA website. During 2019 to 2024 as the works were halted, it was submitted to the MoEF, SEIAA, APPCB, CPCB that the next compliance will be submitted after 6 months from the commencement of the works. Works have commenced during June 2025. 1st and 2nd half yearly compliance report 2025 are submitted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	of Central Pollution Control Board, Bangalore and A.P. Pollution Control Board. The Regional Office of MoEF / APPCB / CPCB / SEIAA, AP shall monitor the stipulated conditions. The proponent shall upload the status of compliance of the environmental clearance, conditions including results of monitored data on their websites and shall update the same periodically.	
8	The environmental statement for each financial year ending 31st march in Form-V as mandated is to be submitted by the project proponent to the A.P. Pollution Control Board as prescribed under the Environment (Protection) Rules, 1986, as amended subsequently, shall also be put	Reports are submitted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	on the website of the Proponent along with the status of compliance of environmental clearance conditions and shall also be sent to the Regional office of the MoEF& CC, Chennai by e-mail.	
9	Concealing the factual data or submission of false / fabricated data and failure to comply with any of the conditions mentioned above may result in withdrawal of this clearance and attract action under the provisions of Environment (Protection) Act, 1986.	Noted.
10	The SEIAA may revoke or suspend the order, if implementation of any of the above conditions is not satisfactory. The SEIAA reserves the right to	Noted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	alter/modify the above conditions or stipulate any further condition in the interest of environment protection.	
11	Any appeal against this Environmental Clearance shall lie with the National Green Tribunal, if preferred, within a period of 30 days as prescribed under Section 16 of the National Green Tribunal Act, 2010.	Noted.
12	The above conditions will be enforced inter-alia, under the provisions of the Water (Prevention & Control of Pollution) Act, 1974, the Air (Prevention & Control of Pollution) Act, 1981, the Environment (Protection) Act, 1986 and the Public Liability Insurance Act, 1991 along with their amendments and	Noted.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	rules.	

Amended EC conditions

S. NO.	EC CONDITION	COMPLIANCE STATUS
1	The project proponent shall conduct or cause to be conducted a comprehensive study on hydro geomorphology of the area with a view to effectively plan water retention ponds/reservoirs, storm water drains and their interconnectivity, so as to optimize water conservation, both surface and sub surface.	**The condition is complied.** Tender Process completed and the firm Blue Energy Build Pvt. Ltd, Hyderabad is the Lowest bidder and agreement was entered vide Agreement no. 1 /LSE/ENV/APCRDA/2025-26, dt 15.4.2025 with 3 months time for completion of studies. The study was commenced during April 2025 and final draft has been submitted by the consultant. **(see Annexure 19).** The final report of the Hydrogeomorphology, Aquifer geometry and Palaeoflood analysis study is submitted to the APPCB for circulation to the committees constituted by the Hon'ble NGT for review. **Water conservation measures in compliance to this direction have already been considered by APCRDA as per the EC condition:** In compliance to the directions, the measures that are already considered by the APCRDA area as follows: Hydrological studies were conducted by M/s Tata Consulting Engineers and M/s Arcadis for the flood management in Amaravati.

S. NO.	EC CONDITION	COMPLIANCE STATUS
		The Flood management studies integrated water retention ponds/ reservoirs with a capacity of 0.53 TMC, improvement of existing natural drains and creation of new canal – called gravity canal with a total length of 48 km etc The water in the Canals and Reservoirs will be retained using locks to serve the recreational needs except during the high flood discharge from the upper catchment, where the excess water is let into River Krishna or into Krishna Western delta Canal. Water retention in the canals and reservoirs of total capacity 0.53 TMC and in a length of 48 km of drains would substantially conserve water and enhance the groundwater recharge. Further, 30 m green buffer on both sides of the natural drains and with 20 m green buffer on both sides of gravity canal designated in the master plan will be developed. These Green buffers will reduce the sediment load in the natural drains, enhance the infiltration and recharge ground water. Treated wastewater reuse lines from the STPs are proposed along all the roads, for reuse applications. The treatment standards considered for BoD is 5mg/l to ensure reuse applications like for flushing, horticulture and other purposes. With the reuse lines, there will be a reduction of raw

S. NO.	EC CONDITION	COMPLIANCE STATUS
		water intake from the surface water body i.e. River Krishna. **See pg 10-13 which indicates the BoD included in BoQ, Bid Document enclosed in Annexure 5.** Further, it is to mention that the outcomes of studies hydrogeomorphology will be in GIS layers indicating potential water recharge zones, which will be superimposed with the master plan to regulate development and simultaneously plan for suitable recharge structures at plot level and zone level. Provision for Sustainable urban drainage systems(SUDS) are considered is included in the city development works which include the integration of the existing water bodies with the storm water network. ***Details of abstract estimate of one project work (land pooling scheme) works of zone 7 are enclosed in Annexure 1. The abstract indicates the STP including tertiary treatment, reuse lines, SUDS.***
2	Any alteration of the flood plains by construction of storm water drains, retention ponds and related development within the capital city should be done only after conducting a study.	**The Condition is complied.** In the NGT directions 17.11.2017, it is mentioned that the city area on the northern side of the bund is in the active flood plains and the southern side of the River Krishna is mentioned as passive flood plains where the city development is proposed.

S. NO.	EC CONDITION	COMPLIANCE STATUS
		It is already submitted to the Hon'ble NGT in the O.A. no. 171 of 2015, Appeal no. 148/2015 and other appeals, no development works will be done in the active flood plain. No alternations have been proposed in the active flood plains of the River Krishna. In the passive flood plains, i.e. southern side of the river bund in which city development is proposed, as per the Environment Clearance conditions, hydrological studies for the Kondaveeti vagu and its tributaries must be completed to plan location of detention ponds and reservoirs to achieve twin objectives – combat of inundation and utilization of water. In compliance to the Environment Clearance condition, hydrological studies were done by M/s Tata Consulting Engineers and M/s Arcadis and Flood management plan was prepared with detention ponds, improvement and strengthening of the existing Vagus/Canals, construction of additional gravity canal and pumping stations to discharge the flood waters into river to protect the city from the Kondaveeti vagu floods.
3	No alteration of the river or natural storm water morphology, flow pattern and location by way of straightening shall be	No alternations have been proposed either to the River Krishna or its natural storm water morphology, flow pattern and location.

S. NO.	EC CONDITION	COMPLIANCE STATUS
	permitted, as such alteration may result in increase of soil erosion, sediment transport due to raised velocity and decrease in ground water recharge which may reduce base flow during the dry season.	All the flood management works proposed are as per the flood management studies which is mandated as per the EC condition and the details of the flood management works, the flood studies report were explained to both committees of the Hon'ble NGT. Copies of the studies undertaken were also submitted.
4	No alteration to the pre-existing embankments if any should be permitted except as may be required for its strengthening for flood protection of the proposed Capital City. Even such exercise should be undertaken after detailed study of the flood pattern and hydraulics of the river or the storm water drains.	No alterations are proposed to existing River bund. As per the Environment clearance conditions measures shall be taken to strengthen the Krishna River Bund to minimize flood related issues. A detailed study on the flood pattern and hydraulics of the river will be undertaken and submitted prior to embankment strengthening works for flood protection.
5	All bulk generators of municipal solid waste in the proposed constructions, both residential and non-residential, must necessarily segregate waste at the source and process entire biodegradable waste by composting or biomethanation within the premises.	It is submitted that the condition is incorporated in the Zoning Regulations. **See Annexure 7.** The conditions are already included in the building permit orders. A sample order is attached along with the proceeding of the commissioner. **(Refer Annexure 10 – see conditions 21-29 in the sample permit order)** The Consent for Establishment has permitted the APCRDA to utilise the existing facilities in the region until permanent facilities are established in the

S. NO.	EC CONDITION	COMPLIANCE STATUS
		City. Currently, the entire city waste from the existing settlements (including waste from High court and Secretariat) is being to the Waste to Energy plant in Guntur. **See Annexure 18.** For all the interlinked building projects, onsite space for waste management is allocated and organic waste processing systems are proposed. Compliance will be submitted post execution of the projects. **See pg 163- 164 of BoQ of an interlinked building project in Amaravati government complex area enclosed in Annexure 2.**

GENERAL ABSTRACT

NAME OF THE WORK : APCRDA - "Construction of Roads, Drains, Water Supply, Sewerage, Utility Ducts for Power & ICT, Reuse waterline, Avenue Plantation, compatible with trunk infrastructure in Layouts for Land Pooling Schemes for kondamarajupalem(P), Lingayapalem(P), Uddandarayunipalem(P), Velagapudi(P) and Mandadam(P) Villages in Zone-7 Area in Amaravati Capital City, Andhra Pradesh on Lump sum Contract (% Percentage Tender) including DLP of 2 Years"

SL.No	Description of Items	Amount in Crores
Part A - Basic Infrastructure Cost (Capex)		
1	Roads	416.36
2	Storm Water Drains	144.85
3	Water Supply	30.10
4	Waste Water	55.31
5	Power & ICT	100.02
6	Reuse Water	10.75
7	Retrofitting Works	10.04
8	Cost towards Investigation,Designs and Drawings at 0.532%	4.08
9	Cost towards Implementation of Environment and Social Management Plan (ESMP) at 1%	7.68
	Sub Total part - A	**779.19**
Part B - Provisions		
1	Seignorage Charges of all works	10.84
2	Extra @ 100% on Seignorage Charges towards consideration amount	10.84
3	Extra @ 2% on Seignorage Charges towards MERIT	0.22
4	Extra @ 30% on Seignorage Charges towards DMF	3.25
5	NAC @ 0.1% on Part A & B (1+2+3+4)	0.80
6	GST @18% on Part A & B (1+2+3+4+5)	144.93
7	Provision for STP including Raw Sewage Pumping Station & Tertiary Treatment including O&M for 7 Years.	170.94
8	Administrative Charges @2% on (A)	15.58
9	Provision for Street furniture and implementation of street design guidelines, provisions for Sustainable Urban drainage systems and other sustainable features, Price Adjustment, Contingences, AMR for property connections and unforeseen items etc...	98.93
	Sub Total part - B	**456.33**
	GRAND TOTAL Part (A + B)	**1235.52**

AEE 14/2/25 DFE C./- 14/2/25 EE 14/2/25 SE

Administrative Sanction accorded for Rs. 1235.52 crores vide G.O.Ms No. 6 MA & UD(CRDA) dept., Dt:- 17.01.2025. Technical Sanction accorded for Rs. 1235.52 crores vide CER No. 19/CE(Infra-I)/2024-25 Dt: 14/02/25.

14/2/2025

Chief Engineer
APCRDA, VIJAYAWADA.

68	4,22,201.63	Upto Ground Floor level - Supplying, fitting and placing thermo Mechanically Treated (TMT) HYSD (Fe 500/500D/550/ tmt grade as per IS 1786-1985) bars reinforcement from primary producers like TATA, SAIL, VIZAG, JINDAL of different diameters for RCC works , as per drawings and technical specifications for Bars 36 mm dia & Below including over laps and wastage, where they are not welded including labour charges for straightening, cutting, bending to required sizes and shapes, placing in position with cover blocks of approved materials and size and tying and lap-splicing with binding wire, forming grills for reinforcement work as per approved designs and drawings, including cost and conveyance of steel bars to site, including all wastages such as overlaps, couplings, chairs, spacer bars including cost and conveyance of binding wire, cover blocks and all incidental, operational, labour charges such as cutting, bending, placing in position, tying including overheads & contractors profit complete for finished item of work (APSS No.126), the works shall be completed including all incidental, operations, labour charges as directed by the departmental authorities.	92.27	3,89,56,544.00
69	48,780.00	1st Floor - Supplying, fitting and placing thermo Mechanically Treated (TMT) HYSD (Fe 500/500D/550/ tmt grade as per IS 1786-1985) bars reinforcement from primary producers like TATA, SAIL, VIZAG, JINDAL of different diameters for RCC works , as per drawings and technical specifications for Bars 36 mm dia & Below including over laps and wastage, where they are not welded including labour charges for straightening, cutting, bending to required sizes and shapes, placing in position with cover blocks of approved materials and size and tying and lap-splicing with binding wire, forming grills for reinforcement work as per approved designs and drawings, including cost and conveyance of steel bars to site, including all wastages such as overlaps, couplings, chairs, spacer bars including cost and conveyance of binding wire, cover blocks and all incidental, operational, labour charges such as cutting, bending, placing in position, tying including overheads & contractors profit complete for finished item of work (APSS No.126), the works shall be completed including all incidental, operations, labour charges as directed by the departmental authorities.	94.29	45,99,466.00
70	39,249.00	2nd Floor - Supplying, fitting and placing thermo Mechanically Treated (TMT) HYSD (Fe 500/500D/550/ tmt grade as per IS 1786-1985) bars reinforcement from primary producers like TATA, SAIL, VIZAG, JINDAL of different diameters for RCC works , as per drawings and technical specifications for Bars 36 mm dia & Below including over laps and wastage, where they are not welded including labour charges for straightening, cutting, bending to required sizes and shapes, placing in position with cover blocks of approved materials and size and tying and lap-splicing with binding wire, forming grills for reinforcement work as per approved designs and drawings, including cost and conveyance of steel bars to site, including all wastages such as overlaps, couplings, chairs, spacer bars including cost and conveyance of binding wire, cover blocks and all incidental, operational, labour charges such as cutting, bending, placing in position, tying including overheads & contractors profit complete for finished item of work (APSS No.126), the works shall be completed including all incidental, operations, labour charges as directed by the departmental authorities.	96.32	37,80,464.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
71	35,100.00	3rd Floor - Supplying, fitting and placing thermo Mechanically Treated (TMT) HYSD (Fe 500/500D/550/ tmt grade as per IS 1786-1985) bars reinforcement from primary producers like TATA, SAIL, VIZAG, JINDAL of different diameters for RCC works , as per drawings and technical specifications for Bars 36 mm dia & Below including over laps and wastage, where they are not welded including labour charges for straightening, cutting, bending to required sizes and shapes, placing in position with cover blocks of approved materials and size and tying and lap-splicing with binding wire, forming grills for reinforcement work as per approved designs and drawings, including cost and conveyance of steel bars to site, including all wastages such as overlaps, couplings, chairs, spacer bars including cost and conveyance of binding wire, cover blocks and all incidental, operational, labour charges such as cutting, bending, placing in position, tying including overheads & contractors profit complete for finished item of work (APSS No.126), the works shall be completed including all incidental, operations, labour charges as directed by the departmental authorities.	98.34	34,51,734.00
72	21,843.00	Terrace - Supplying, fitting and placing thermo Mechanically Treated (TMT) HYSD (Fe 500/500D/550/ tmt grade as per IS 1786-1985) bars reinforcement from primary producers like TATA, SAIL, VIZAG, JINDAL of different diameters for RCC works , as per drawings and technical specifications for Bars 36 mm dia & Below including over laps and wastage, where they are not welded including labour charges for straightening, cutting, bending to required sizes and shapes, placing in position with cover blocks of approved materials and size and tying and lap-splicing with binding wire, forming grills for reinforcement work as per approved designs and drawings, including cost and conveyance of steel bars to site, including all wastages such as overlaps, couplings, chairs, spacer bars including cost and conveyance of binding wire, cover blocks and all incidental, operational, labour charges such as cutting, bending, placing in position, tying including overheads & contractors profit complete for finished item of work (APSS No.126), the works shall be completed including all incidental, operations, labour charges as directed by the departmental authorities.	100.37	21,92,382.00
73	27,101.00	Waterproofing to Base Slab - Providing and laying water proofing treatment in Base slab built-up with a primer coat of neat cement mixed with an integral water proofing compound, and two coats of polyurethane / acrylic based component water proofing system laid over plaster of 12mm thick in CM 1:4, finished with a protective layer of plaster of 15mm thick in CM 1:4, sealing all the joints of pipes, corners, edges with epoxy putty all as required, as per specifications, drawings and as directed for all floors and at all levels complete. (For Horizontal areas). Makes Fosroc / Sika / Cera / MC Bauchemie or equivalent, the works shall be completed including all incidental, operations, labour charges as directed by the departmental authorities.	1,290.00	3,49,60,290.00
74	1,341.00	Expansion Joint - Providing and fixing of expansion joint system related with wall joint (internal/ external) location: The joints shall be of extruded aluminum base members, self aligning / centering arrangement and support plates as per ASTM B221- 02. The material shall be such that it provides an Expansion Joints system suitable for vertical wall to wall / wall to corner application, both new and existing construction in buildings & complexes with no slipping down tendency amongst the components of the Joint System. The Joint System shall utilize light weight aluminium profiles exhibiting minimal exposed aluminium surfaces mechanically snap locking the multi cellular to facilitate movement. (Material shall confirm to ASTM 6063.) (Wall Joint of 200 mm gap)	5,861.39	78,60,124.00
75	489.64	Ground Floor - Masorny work in CM (1:5) prop with Supply of Aerated (Cellular) Autoclaved Concrete Blocks conforming to IS:2185 (Part-3) - 1984 and IS:6441-1972 of Compressive strength 3 N/mm2 600 x 200 x 200 mm including cost and conveyance of all materials, labour charges , scafolding and curing etc., complete for walls - Ledge wall	7,464.07	36,54,707.00

533	18.00	25 mm dia - Providing and fixing enclosed type water meter (bulk type) conforming to IS : 2373 and tested by Municipal Board complete with bolts, nuts, rubber insertions etc. (The tail pieces if required will be paid separately) :	7,500.00	1,35,000.00
534	18.00	32 mm dia - Providing and fixing enclosed type water meter (bulk type) conforming to IS : 2373 and tested by Municipal Board complete with bolts, nuts, rubber insertions etc. (The tail pieces if required will be paid separately) :	8,125.00	1,46,250.00
535	2.00	40mm dia - Providing and fixing enclosed type water meter (bulk type) conforming to IS : 2373 and tested by Municipal Board complete with bolts, nuts, rubber insertions etc. (The tail pieces if required will be paid separately) :	10,156.25	20,313.00
536	2.00	50mm dia - Providing and fixing enclosed type water meter (bulk type) conforming to IS : 2373 and tested by Municipal Board complete with bolts, nuts, rubber insertions etc. (The tail pieces if required will be paid separately) :	12,695.31	25,391.00
537	1.00	20 mm dia - Providing and fixing bronze pressure reducing valve complete in all respect with pressure setting for inlet 5 to 7 kg/cm2 and for outlet 3 kg/cm2.	23,750.00	23,750.00
538	1.00	25 mm dia - Providing and fixing bronze pressure reducing valve complete in all respect with pressure setting for inlet 5 to 7 kg/cm2 and for outlet 3 kg/cm2.	27,500.00	27,500.00
539	14.00	32 mm dia - Providing and fixing bronze pressure reducing valve complete in all respect with pressure setting for inlet 5 to 7 kg/cm2 and for outlet 3 kg/cm2.	35,200.00	4,92,800.00
540	6.00	40 mm dia - Providing and fixing bronze pressure reducing valve complete in all respect with pressure setting for inlet 5 to 7 kg/cm2 and for outlet 3 kg/cm2.	44,000.00	2,64,000.00
541	87.00	50 mm dia - Providing and fixing bronze pressure reducing valve complete in all respect with pressure setting for inlet 5 to 7 kg/cm2 and for outlet 3 kg/cm2.	50,000.00	43,50,000.00
542	30.00	65 mm dia - Providing and fixing bronze pressure reducing valve complete in all respect with pressure setting for inlet 5 to 7 kg/cm2 and for outlet 3 kg/cm2.	65,000.00	19,50,000.00
543	3.00	Hydropneumatic Booster system for Top Floors at Terrace Level (Domestic Water Supply)Providing, fixing and commissioning suitable complete composite hydropneumatic system consisting of horizontal /vertical multistage centrifugal pump having stainless steel (SS 304) impellers, shaft and housing, with single mechanical seal and pressurised tank of 50 liters capacity, complete with all standard accessories including pressure switch, pressure gauges, non-return & isolating valves on suction and delivery side with nuts, bolts & washer including mild steel flanges, where ever required with 3 mm thick rubber insertion, with necessary protection and operational devices i.e alternate pumping operation and shut-off during dry running conditions etc. with suitable electrical motor to be operated on 210/220 OR 400/440 volt 50 cycle AC supply, suitable for following duty and with total no. of pumps - 2 nos.(1 working+1standby) complete with Control Unit Panel, manifolds & chassis, as per the approval of Project-in-charge complete with base frame, nuts, bolts and washer, necessary RCC foundation as per requirement.No. of Pumps/Set : 2 (1 Working + 1 Stand by)Capacity : app. 150 lpm per pumpHead : app. 20-25 m	3,43,754.00	10,31,262.00
544	3.00	Pressure Tank 200 Liters 10 Bar	9,967.00	29,901.00
545	24.00	1 No. 100mm dia puddle flange outlet pipe - Supplying, fixing & testing inlet, outlet & pipes & fittings to storm water sump with steps & CI frame and cover as shown on the drawings etc., complete with accessories comprising of the following. Approximate depth. - 3.0 M	34,540.00	8,28,960.00
546	52.00	Width of the drain = 450 mm - Supplying and installing MS fabricated ramp drain grating at entrance where ever indicated using 50mm nominal bore,MS pipes at 105mm C/C and 8mm thick MS flats welded together and placed on MS angles of size 65mm x 65mm x 6mm as enumerated in the drawings, the quoted rates shall include for painting two coats of enamel paint over a coat of primer etc.,complete.	10,368.75	5,39,175.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
547	114.00	600mm x 600mm (clear internal dimension) - Construction of Catch Basin with 230mm best quality approved Table Moulded bricks in CM 1:4 over a bed of 100mm thick PCC 1:4:8, internal walls plastered in CM 1:3 and external wall with CM 1:6 with sponge finish. Supplying and fixing RCC perforated square frame & cover of size 600 x 600mm (Medium duty), PVC steps in position . The quoted rate shall also include necessary excavation and internal size of the chamber 600 x 600mm maximum depth not exceeding 1200mm.	22,936.00	26,14,704.00
548	7,101.00	200 mm dia - Supplying, installing, testing and commissioning of R.C.C NP2 class Hume pipe laid to the required level and grade with collars joining in CM 1:3 and filling the excavated trench with approved quality quarry dust on sides, bottom and top surface of pipe with all leads and lifts, making necessary connections as required etc.,complete.	1,387.00	98,49,087.00
549	213.50	25 mm dia - Supplying, installing, testing and commissioning of approved make uPVC schedule 40 pipes and schedule 80 fittings conforming to ASTM D-1785. Quoted rate shall include necessary fittings like, bends, elbows, reducers, collars, flanges, saddles, adapters, etc., with necessary drilling holes, chasing walls and making the same good in cement mortar 1:1 restore the same original condition neatly as directed by the Engineer in-charge and also including primer and solvent for joints. The Shaft piping to be supported with MS brackets with " U " Bolts and Nuts and Ceiling Piping with 8 mm GI threaded rod with Anchor Fastener with GI nuts and washers and supported with " U " clamps.	314.00	67,039.00
550	1,644.00	32 mm dia - Supplying, installing, testing and commissioning of approved make uPVC schedule 40 pipes and schedule 80 fittings conforming to ASTM D-1785. Quoted rate shall include necessary fittings like, bends, elbows, reducers, collars, flanges, saddles, adapters, etc., with necessary drilling holes, chasing walls and making the same good	376.00	6,18,144.00
551	194.00	40 mm dia - Supplying, installing, testing and commissioning of approved make uPVC schedule 40 pipes and schedule 80 fittings conforming to ASTM D-1785. Quoted rate shall include necessary fittings like, bends, elbows, reducers, collars, flanges, saddles, adapters, etc., with necessary drilling holes, chasing walls and making the same good	415.00	80,510.00
552	5,002.00	50 mm dia - Supplying, installing, testing and commissioning of approved make uPVC schedule 40 pipes and schedule 80 fittings conforming to ASTM D-1785. Quoted rate shall include necessary fittings like, bends, elbows, reducers, collars, flanges, saddles, adapters, etc., with necessary drilling holes, chasing walls and making the same good	500.00	25,01,000.00
553	4,879.00	65 mm dia - Supplying, installing, testing and commissioning of approved make uPVC schedule 40 pipes and schedule 80 fittings conforming to ASTM D-1785. Quoted rate shall include necessary fittings like, bends, elbows, reducers, collars, flanges, saddles, adapters, etc., with necessary drilling holes, chasing walls and making the same good	709.00	34,59,211.00
554	880.00	32 mm dia - Supplying, installing, fixing, jointing, testing and commissioning of approved make Chlorinated Polyvinyl Chloride pipes (CPVC) up to 50mm dia SDR.11, ASTM CTS, and above 50mm dia CPVC schedule 40 ASTM IPS. Fittings up to 50mm dia SDR.11. The fittings and specials such as tees, elbows, couplers, bends, enlargers etc.,with CPVC brass threaded combination / transition specials such as male adapters brass threaded female adapters, brass FPT Tee, Brass FPT elbow etc., where connection with metal is to be made including necessary drilling holes, chasing walls and making the same good in cement martor 1:1 restore the same original condition neately as directed by the Engineer in-charge. Joints to be made with CPVC solvent cement up to 50mm dia as per ASTM D-2846 and above 50mm dia primer P-70, and solvent confirming to ASTM F - 4931 / 724.	365.00	3,21,200.00
555	2,198.00	40 mm dia - Supplying, installing, fixing, jointing, testing and commissioning of approved make Chlorinated Polyvinyl Chloride pipes (CPVC) up to 50mm dia SDR.11, ASTM CTS, and above 50mm dia CPVC schedule 40 ASTM IPS. Fittings up to 50mm dia SDR.11. The fittings and specials such as tees, elbows, couplers, bends, enlargers etc.,with CPVC brass threaded combination / transition specials such as male adapters brass threaded female adapters, brass FPT Tee, Brass FPT elbow etc., where connection with metal is to be made including necessary drilling holes, chasing walls and making the same good in cement martor 1:1 restore the same original condition neately as directed by the Engineer in-charge. Joints to be made with CPVC solvent cement up to 50mm dia as per ASTM D-2846 and above 50mm dia primer P-70, and solvent confirming to ASTM F - 4931 / 724.	863.00	18,96,874.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
556	44.00	50 mm dia - Supplying, installing, fixing, jointing, testing and commissioning of approved make Chlorinated Polyvinyl Chloride pipes (CPVC) up to 50mm dia SDR.11, ASTM CTS, and above 50mm dia CPVC schedule 40 ASTM IPS. Fittings up to 50mm dia SDR.11. The fittings and specials such as tees, elbows, couplers, bends, enlargers etc.,with CPVC brass threaded combination / transition specials such as male adapters brass threaded female adapters, brass FPT Tee, Brass FPT elbow etc., where connection with metal is to be made including necessary drilling holes, chasing walls and making the same good in cement martor 1:1 restore the same original condition neately as directed by the Engineer in-charge. Joints to be made with CPVC solvent cement up to 50mm dia as per ASTM D-2846 and above 50mm dia primer P-70, and solvent confirming to ASTM F - 4931 / 724.	1,545.00	67,980.00
557	3,816.00	65 mm dia - Supplying, installing, fixing, jointing, testing and commissioning of approved make Chlorinated Polyvinyl Chloride pipes (CPVC) up to 50mm dia SDR.11, ASTM CTS, and above 50mm dia CPVC schedule 40 ASTM IPS. Fittings up to 50mm dia SDR.11. The fittings and specials such as tees, elbows, couplers, bends, enlargers etc.,with CPVC brass threaded combination / transition specials such as male adapters brass threaded female adapters, brass FPT Tee, Brass FPT elbow etc., where connection with metal is to be made including necessary drilling holes, chasing walls and making the same good in cement martor 1:1 restore the same original condition neately as directed by the Engineer in-charge. Joints to be made with CPVC solvent cement up to 50mm dia as per ASTM D-2846 and above 50mm dia primer P-70, and solvent confirming to ASTM F - 4931 / 724.	2,008.50	76,64,436.00
558	4,750.00	80 mm dia - Supplying, installing, fixing, jointing, testing and commissioning of approved make Chlorinated Polyvinyl Chloride pipes (CPVC) up to 50mm dia SDR.11, ASTM CTS, and above 50mm dia CPVC schedule 40 ASTM IPS. Fittings up to 50mm dia SDR.11. The fittings and specials such as tees, elbows, couplers, bends, enlargers etc.,with CPVC brass threaded combination / transition specials such as male adapters brass threaded female adapters, brass FPT Tee, Brass FPT elbow etc., where connection with metal is to be made including necessary drilling holes, chasing walls and making the same good in cement martor 1:1 restore the same original condition neately as directed by the Engineer in-charge. Joints to be made with CPVC solvent cement up to 50mm dia as per ASTM D-2846 and above 50mm dia primer P-70, and solvent confirming to ASTM F - 4931 / 724.	2,472.00	1,17,42,000.00
559	65.00	50 mm dia - Supplying, installing, testing and commissioning CI butterfly valves with standard lever confirming to IS standard 13039 with necessary flanges, nuts and bolts etc., complete.	3,514.00	2,28,410.00
560	65.00	50 mm dia - Supplying and fixing in position approved make GM non-return valve conforming to IS 778 with necessary fittings etc., complete.	6,070.00	3,94,550.00
561	32.00	50 mm dia - Supplying, installing, testing and commissioning CI body Water Meter confirming to IS 2373 with necessary flanges, nuts and bolts etc., complete.	9,186.25	2,93,960.00
562	32.00	65 mm dia - Supplying, installing, testing and commissioning CI body Water Meter confirming to IS 2373 with necessary flanges, nuts and bolts etc., complete.	9,792.50	3,13,360.00
563	8.00	100 mm dia - Supplying, installing, testing and commissioning CI body Water Meter confirming to IS 2373 with necessary flanges, nuts and bolts etc., complete.	40,123.75	3,20,990.00
564	7.00	100 mm dia - Supplying and fixing in position approved make Y - strainer with necessary fittings conforming to IS standards etc., complete.	18,959.00	1,32,713.00
565	8.00	Supplying, fixing & testing in position of Hot deep Galvanise C class pipe puddle flanges fabricated of 750 mm long pipe pieces to R.C.C. water tanks wall / slab. The entire fitting shall be hot dipped galvanised (Flanges shall confirm to BS10 Table E) .	1,85,381.25	14,83,050.00
566	24.00	a) CI manhole frame and cover (Medium duty) with locking facility	8,322.50	1,99,740.00
567	200.00	100 mm dia - Supplying, installing, testing & commissioning of approved make medium quality (Class B') GI pipes and fittings confirming to IS1239 PI & II, Malleable Specials such as tees, elbows, checknuts, unions, flanges, nipples, etc including cutting, threading, fixing in/on walls, ceiling, under floor etc.,as per drawing. The quoted rate shall include for necessary excavation in any type of soil and back filling, chasing the walls, making bore in walls etc.,and making good the chased surfaces and bores in cement mortar etc.complete. (Municipal water supply)	2,513.00	5,02,600.00
568	432.00	100 mm dia - Supplying & wrapping the concealed and buried GI pipes with approved protective PVC tape with 50% overlap etc., complete	400.00	1,72,800.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
569	200.00	100 mm dia - Supplying and painting two coats of enamel paint over a coat of each primer to the exposed GI pipes of approved make and colour etc.,complete.	113.75	22,750.00
570	12.00	100mm nominal dia - Supplying, installing, testing and commissioning of approved make cast brass body water meter with necessary unions for fixing on the inlet main as shown on the drawing, etc., complete with water meter chamber of 800 x 800mm with cover etc., complete.(of approved makes - both analog / digital)(Municipal & Borewell inlet line)	59,156.25	7,09,875.00
571	12.00	Supplying, fixing and testing of approved make 100 mm dia inlet SS float operated CI ball valve for the municipal inlet to the Fire water tank.	7,160.40	85,925.00
572	12.00	Supplying, installing and testing of 100mm dia tanker inlet connection system near the raw water storage tank. This includes 100 dia standpost, non return valve, Butterfly Valve & instantaneous brass coupler, etc.,complete	18,008.75	2,16,105.00
573	4.00	Providing, installing, testing and commissioning of approved make Microprocessor based automatic industrial electronic liquid level controller with SS 316 plastic moulded sensor which includes timer for Sequential operation of Main & Standby pump. - WATER LEVEL CONTROLLER	69,285.00	2,77,140.00
574	4.00	Providing, installing, testing and commissioning of approved make percentage digital water level indicator for sumps.	28,601.25	1,14,405.00
575	276.00	Excavation in all sorts of soil for laying RCC hume pipes upto 600mm dia (internal) including forming bottom surface to required level refilling selected excavated earth around the pipe in layers of 150mm thick watering consolidating and disposing off the surplus earth with in the site or as directed by the site Engineer with in a lead of 300m etc., complete.	176.94	48,835.00
576	2,050.00	250 mm dia - Supplying, installing, testing and commissioning of R.C.C NP2 class Hume pipe laid to the required level and grade with collars joining in CM 1:3 and filling the excavated trench with approved quality quarry dust on sides, bottom and top surface of pipe with all leads and lifts, making necessary connections as required etc.,complete.	1,644.00	33,70,200.00
577	1,800.00	300 mm dia - Supplying, installing, testing and commissioning of R.C.C NP2 class Hume pipe laid to the required level and grade with collars joining in CM 1:3 and filling the excavated trench with approved quality quarry dust on sides, bottom and top surface of pipe with all leads and lifts, making necessary connections as required etc.,complete.	2,253.00	40,55,400.00
578	700.00	450 mm dia - Supplying, installing, testing and commissioning of R.C.C NP2 class Hume pipe laid to the required level and grade with collars joining in CM 1:3 and filling the excavated trench with approved quality quarry dust on sides, bottom and top surface of pipe with all leads and lifts, making necessary connections as required etc.,complete.	3,039.00	21,27,300.00
579	9.00	Providing & constructing rain water deep recharge well of 1350mm dia upto 25M depth as per the details given in the drawing. The quoted rate shall include pre-cast RCC rings, top cover RCC etc., complete (Tank Size 5m X 2.5m X 3.5m. Depth of the borehole will be upto 60m)	2,59,533.75	23,35,804.00
580	92.00	Construction of catch basin of 1200mm x 900mm size and depth 1200mm to 2500mm for external storm water drainage with 230mm thick walls in well burnt table moulded bricks in CM 1:4 over a bed of 100 mm thick PCC 1:4:8 internal walls plastered smooth in CM 1:3 and external walls plastered in1:6 with sponge finish. Fixing precast RCC grating of size 600 x 600mm on top surface flushed to the finished floor level with necessary excavation, back filling the selected excavated earth with all leads and lifts etc., complete. The quoted rate shall include 110dia PVC pipe sleeves from road GSM to the chamber as shown in the drawings. RCC grating : Southern concrete Industries a) 1200mm x 900mm (clear internal dimension)	59,110.00	54,38,120.00
581	80.00	Construction of man hole with best quality, approved table moulded bricks in CM 1:6, 500mm dia @ top and 1200mm dia. @ bottom over a bed of 250mm thick PCC 1:4:8, walls plastered smooth inside in CM 1:3 and outside with CM 1:6 with sponge finish benching and channelling in PCC 1:3:6 supplying & fixing PVC steps as per drawing for maintenance. The manhole shall be provided with heavy duty RCC frame & cover. Circular 550 mm dia. Clear opening etc., complete. The quoted rate shall also include for necessary pvc steps, excavation, refilling, disposing off surplus earth with in a lead of 300M etc., complete. Depth upto 3.5 Mtrs. Manhole cover/pvc steps : Southern concrete Industries.	45,551.25	36,44,100.00
582	20.00	Supply & Installation of Cattle Trap - 1000mm wide as per drawing & Specificatio to complete the work	22,775.00	4,55,500.00
583	155.00	PRM pipe from basement sump, 50mm dia	436.25	67,619.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
584	35.00	Supply & Installation of RCC Hume Pipe - 100mm dia	1,033.00	36,155.00
585	300.00	Supply & Installation of Landscape Pipe for Free flow - 110mm dia	540.00	1,62,000.00
586	220.00	Supply & Installation of Landscape Pipe - 40mm dia	400.00	88,000.00
587	2.00	PUMPS AND EQUIPMENTS (Hydropneumatic Pumping System With Variable Frequency Drive) for Cluster A onlySupply, Installation, Testing and Commissioning of compact packaged type skid mounted, self contained variable frequency drive hydropneumatic system complete as per directions of the engineer-in-charge & as per following specification:-(i) In- line vertical multistage centrifugal clear water pump set with SS-304 casing, SS-304 impeller with SS-316/SS431 shaft ,CI base with CED coating complete directly coupled with TEFC induction motor of class "F" insulation & efficiency class IE-2, 2900rpm, suitable for opertion on 415 Volts ±10%, 3 phase, 50 Hz A.C. supply complete. (ii) The entire system shall be mounted on a common base frame i/c common suction and common delivery of MS Ced coating pipe headers with flanges, interconnecting piping with all required Conrol Valves, Non-return valves, pressure guage with isolation cock etc. and all requried accessories.(iii) Pressure vessel of non corrosive MS composite construction lined with NSF and/or FDA listed material, like high density polyethylene with fully replaceable polyurethane. Air cell burst pressure of minimum of 3 times the vessel operating pressure and prototype cycle tested for 80,000 cycles with charging connections to dischage pipe line with necessary flanges, gaskets, isolating valve, nuts/ bolts etc. with suitable foundation boits & other accessories, complete.(iv) Panel mounted microprocessor multi pump contoller with large graphical display and Flying variable frequency drive (VFD) mounted inside a panel complete with pressure sensor transmitter. The graphical display capable to show number of pumps running & also communicate with other controllers following with open protocol through RS485 port. System should be capable to compensate for frictional losses at lower flows. All alarms should be displayed in the controller. The panel should also have provision for manual / automatic alternate (cyclic) operation of pumps, ON/OFF switch, complete.(v) Necessary foundationing bolts, vibration elimination pads and other accessories complete as required.Duty of each pump suitable for:-DOMESTIC WATER SUPPLY PUMPNo. of Pumps : 3nos. (2 W + 1 S)Capacity : 300 LPMHead : 80 MetersAir Vessel :100 ltr tankNote:-1 set consists of 3 nos. of pumps (2Working + 1Standby)	12,40,500.00	24,81,000.00
588	2.00	ELECTRICAL SYSTEMFor WTP Pump RoomDesign, manufacture, supply, installation, testing and commissioning of the Plumbing panel, front operated, cubicle construction, Floor mounted type, fabricated out of 16 swg thick CRCA Sheet, Compartmentalized with hinged lockable doors, dust and vermin proof, Powder coated of approved shade, Cable alley, inter-connections, having Switch gear and accessories mounting, internal wiring, earth terminals, Top/ Bottom cable entry, numberings etc. suitable for operation of 415 volts, 3 phase, 50 Hz, AC Supply with enclosure protection class IP 54 complete as required and as specified with the following:INCOMER - Each Incomer shall consit of :250 Amps,Four pole, 11 KA MCCB with rotary handle on door. Voltmeter (0-500 Volts) with selector Switch & protected by MCB's.Ammeter (0-300 Amps) with selector Switch &CT's etc.Set of (R,Y,B) LED phase and ON & OFF indication Lamps.BUSBAR1 Set 11KV, 300 Amps Three Phase busbars of aluminium with Rear cable termination.OUT GOING FOR :-Domestic Water Supply hydropneumatic pumps set 100 Amps. TP with nuetral link MCCB (Motor Duty) 1.1 KA with rotary handle on door suitable for 12.5 HP and for Connection to Built up Hydro Panel.---1No.Flushing Water Supply hydropneumatic pumps set 25 Amps. TP with nuetral link MCCB (Motor Duty) 1.1 KA with rotary handle on door suitable for 7 HP and for Connection to Built up Hydro Panel.---1No.GARDEN HYDRANT PUMP 2(1w+1s) pumpsPump feeder shall consit of :Suitable rating MPCB with DOL Starter for outgoing feeder of 5 HP. Each Compartment shall contain Auto/Manual Selector Switch and Indicating Lamp for ON/TRIP Status of Motor---4 NosAmmeter (0-100 Amps) with selector Switch & CT's etc.Set of ON / OFF LED indication Lamps protected by MCB. For Drainage Sump Pumps Plant Room area Pump feeder shall consit of :32 Amps. TP MCCB 25 KA with rotary handle on door suitable for Connection to Built up Panel.--1NoAmmeter (0-100 Amps) with selector Switch & CT's etc.Set of ON / OFF LED indication Lamps protected by MCB.NOTE:-1. All MCCB shall have 100% Ics =Icu 2.Panel shall be provided with NO-NC Potential free contact for BMS compliance.Complete Set as mentioned above	11,40,500.00	22,81,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
589	2.00	Pump motor controller cum water level indicating panel at WTP Plant RoomSupply, installation, testing and commissioning of Centralised PLC control panel front operated, cubicle construction, wall mounted type, fabricated out of 1.6 mm thick CRCA Sheet, with hinged lockable doors, dust and vermin proof, powder coated of approved shade, inter-connections, having, internal wiring, earth terminals, Top / Bottom control cable entry, numberings etc.comprises of touch-screen display board (Min.Diag. size 8") along with all accessories for complete Programmable logical controls & indications,having necessary interlocks, Inputs/Outputs, required number of repeater amplifiers, all audio-visual alarms as per the requirements listed below i/c emergency stop push button on the panel etc. The panel shall have BMS compatible Modbus protocol complete as required and as specified.Water level indicators and controllers :The hydrostatic pressure sensor (Water level indicator) is working on hydrostatic pressure measurement principle made of Stainless Steel for installation in storage tanks, and capable of providnig 4 to 20 mA analog signal compatible with PLC signal inputs and all control outputs to MCC panel (Plumbing/Water supply),complete as per working requirements for equipment detailed below. A) Fire Static Underground tanks- 2 No.Real-Time water level indication monitoringLow Level audio-visual alarm at less than 30% total capacity. B) Domestic Water Underground tanks- 2 No.Real-Time water level indication monitoringLow Level audio-visual alarm at less than 30% total capacity.High Level audio-visual alarm at more than 100% total capacity.Auto cut-out of raw water pumps at 100% C) Flushing Water Underground tanks- 2 No.Real-Time water level indication monitoringLow Level audio-visual alarm at less than 30% total capacity.High Level audio-visual alarm at more than 100% total capacity.Auto cut-out of domestic water hydronuematic pumps at 100% Complete Set as mentioned above	4,80,500.00	9,61,000.00
590	120.00	Supply, laying, dressing, testing & commissioning of 2 Core 1.5Sq.mm 1100 volts grade XLPE insulated FRLS PVC sheathed copper conductor as per IS 8130 with armoured XLPE/PVC cables as per IS 7098 / IS 1554 (Part-I & II) as per detailed technical specifications suitable to lay in cable trays/shafts/hume pipes/HDPE DWC pipes with requried accessories etc as required includingall labour charges and as directed by Engineer-In-Charge. Makes: Torent / Universal / Unicab / Havells / Finecab / KEI / Gloster/ Polycab /RR Kabel/ Fortune Arrt.	169.40	20,328.00
591	100.00	Supply, laying, dressing, testing & commissioning of 3 Core 2.5Sq.mm 1100 volts grade XLPE insulated FRLS PVC sheathed copper conductor as per IS 8130 with armoured XLPE/PVC cables as per IS 7098 / IS 1554 (Part-I & II) as per detailed technical specifications suitable to lay in cable trays/shafts/hume pipes/HDPE DWC pipes with requried accessories etc as required includingall labour charges and as directed by Engineer-In-Charge. 592	120.00	Supply, laying, dressing, testing & commissioning of 3 Core 4.0Sq.mm 1100 volts grade XLPE insulated FRLS PVC sheathed copper conductor as per IS 8130 with armoured XLPE/PVC cables as per IS 7098 / IS 1554 (Part-I & II) as per detailed technical specifications suitable to lay in cable trays/shafts/hume pipes/HDPE DWC pipes with requried accessories etc as required includingall labour charges and as directed by Engineer-In-Charge. Makes: Torent / Universal / Unicab / Havells / Finecab / KEI / Gloster/ Polycab /RR Kabel/ Fortune Arrt.	263.10	31,572.00
593	100.00	Supply, laying, dressing, testing & commissioning of 3 Core 6.0Sq.mm 1100 volts grade XLPE insulated FRLS PVC sheathed copper conductor as per IS 8130 with armoured XLPE/PVC cables as per IS 7098 / IS 1554 (Part-I & II) as per detailed technical specifications suitable to lay in cable trays/shafts/hume pipes/HDPE DWC pipes with requried accessories etc as required includingall labour charges and as directed by Engineer-In-Charge. Makes: Torent / Universal / Unicab / Havells / Finecab / KEI / Gloster/ Polycab /RR Kabel/ Fortune Arrt.	340.40	34,040.00
594	100.00	Supply, laying, dressing, testing & commissioning of 3 Core 10.0Sq.mm 1100 volts grade XLPE insulated FRLS PVC sheathed copper conductor as per IS 8130 with armoured XLPE/PVC cables as per IS 7098 / IS 1554 (Part-I & II) as per detailed technical specifications suitable to lay in cable trays/shafts/hume pipes/HDPE DWC pipes with requried accessories etc as required includingall labour charges and as directed by Engineer-In-Charge. Makes: Torent / Universal / Unicab / Havells / Finecab / KEI / Gloster/ Polycab /RR Kabel/ Fortune Arrt.	416.50	41,650.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
595	80.00	Supply, laying, dressing, testing & commissioning of 3 Core 16.0Sq.mm 1100 volts grade XLPE insulated FRLS PVC sheathed copper conductor as per IS 8130 with armoured XLPE/PVC cables as per IS 7098 / IS 1554 (Part-I & II) as per detailed technical specifications suitable to lay in cable trays/shafts/hume pipes/HDPE DWC pipes with requried accessories etc as required includingall labour charges and as directed by Engineer-In-Charge. Makes: Torent / Universal / Unicab / Havells / Finecab / KEI / Gloster/ Polycab /RR Kabel/ Fortune Arrt.	571.00	45,680.00
596	4.00	Providing independent earthing for Important equipment with 40mm dia 'B' class 2.5m long G.I pipe and 19mm dia 'B' class G.I pipe of 0.3mtr. long connected with reducer providing G.I funnel with mesh enclosed in C.C.Chamber of 400m x 400m x 400mm with R.C.C. Slab cover duly providing staggered holes filling with salt and charcoal from the bottom of the pipe giving earth connection from electrode through G.I strip of 25 x 6mm x 200mm length with all accessories and labour charges complete, as per IS specifications 732/1982 (Part II)	10,928.00	43,712.00
597	2.00	50 mm dia nominal bore - Providing and fixing enclosed type water meter (bulk type) conforming to IS : 2373 and tested by Municipal Board complete with bolts, nuts, rubber insertions etc. (The tail pieces if required will be paid separately) :	3,000.00	6,000.00
598	2.00	150 mm dia nominal bore - Providing and fixing enclosed type water meter (bulk type) conforming to IS : 2373 and tested by Municipal Board complete with bolts, nuts, rubber insertions etc. (The tail pieces if required will be paid separately) :	8,179.26	16,359.00
599	12.00	Supply and fixing of Class A insulation having 2mm thickness upto 3.3KV PVC synthetic elastomer electrically insulated mat conforming to IS: 15652-2006 complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make.	5,224.00	62,688.00
600	2.00	SUBMERSIBLE SUMP PUMPS FOR LIFTING DRAINAGEPlant room Drainage Sump PumpProviding and fixing compact monoblock dry motor submersible pumps of suitable rating, with non-clog free flow open impeller, solid handling capacity of upto at least 28mm suitable for operation on 415 volts +10% , 3 Phase, 50Hz, A.C supply, speed 2900 RPM including oil chamber, guide wire for lifting & lowering of pump, M.S. galvanized lifting chain, complete. The pump sets shall be supplied with required accessories & as per specification with the following : (a) Complete piping 80 mm dia common delivery upto 7.5 m in heavy Duty Class 'C' G.I. -- 1 Set (b) 65mm dia Butterfly valve.-- 2 Nos (c) 65 mm dia Flap type Non-return valve.-- 2 Nos (d) Necessary cables from pump set to control panel (position of panel marked on enclosed drawings).- 1 Set (e) Electrical control panel having all necessary accessories & safety devices of standard specifications and suitable for receiving incommer cable from main plumbing panel to conncet sump pump panel complete as required. (Panels with sump pumps near each sump as per site conditions). --1 No. Each set consist of 2 nos.of pumps - 1 working & 1 stand by (Complete set as above with 2 nos. pumps including cost for valves, piping, Control Panel and Cabling, Level Controllers etc as required and as specified) 2.The entire system alongwith pumps & control panel must be sourced from single manufacturer only for unit responsibility. Discharge - 250 LPM EachTotal head - 15 Meters (minimum)	5,50,500.00	11,01,000.00
601	20.00	50mm dia - Provding and fixing heavy duty G.I. pipe (For Suction & Delivery of pumps and equipment) confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above with reducers, tees, flanges, elbow, crosses, union etc. and fixing the pipes on wall / ceiling / beam / floor including Clamping/Supporting the same, including painting with 2 coats of synthetic enamel paint as per the site requirement and shall be duly painted with two coats of approved quality synthetic enamel paint & shade over a readymix primer coat complete as required & as per directions of the engineer-in-charge for the following sizes:	1,136.00	22,720.00
602	190.00	80mm dia - Provding and fixing heavy duty G.I. pipe (For Suction & Delivery of pumps and equipment) confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above with reducers, tees, flanges, elbow, crosses, union etc. and fixing the pipes on wall / ceiling / beam / floor including Clamping/Supporting the same, including painting with 2 coats of synthetic enamel paint as per the site requirement and shall be duly painted with two coats of approved quality synthetic enamel paint & shade over a readymix primer coat complete as required & as per directions of the engineer-in-charge for the following sizes:	1,817.60	3,45,344.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
603	180.00	100mm dia - Provding and fixing heavy duty G.I. pipe (For Suction & Delivery of pumps and equipment) confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above with reducers, tees, flanges, elbow, crosses, union etc. and fixing the pipes on wall / ceiling / beam / floor including Clamping/Supporting the same, including painting with 2 coats of synthetic enamel paint as per the site requirement and shall be duly painted with two coats of approved quality synthetic enamel paint & shade over a readymix primer coat complete as required & as per directions of the engineer-in-charge for the following sizes:	2,272.00	4,08,960.00
604	218.50	150mm dia - Provding and fixing heavy duty G.I. pipe (For Suction & Delivery of pumps and equipment) confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above with reducers, tees, flanges, elbow, crosses, union etc. and fixing the pipes on wall / ceiling / beam / floor including Clamping/Supporting the same, including painting with 2 coats of synthetic enamel paint as per the site requirement and shall be duly painted with two coats of approved quality synthetic enamel paint & shade over a readymix primer coat complete as required & as per directions of the engineer-in-charge for the following sizes:	3,408.00	7,44,648.00
605	212.50	200mm dia - Provding and fixing heavy duty G.I. pipe (For Suction & Delivery of pumps and equipment) confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above with reducers, tees, flanges, elbow, crosses, union etc. and fixing the pipes on wall / ceiling / beam / floor including Clamping/Supporting the same, including painting with 2 coats of synthetic enamel paint as per the site requirement and shall be duly painted with two coats of approved quality synthetic enamel paint & shade over a readymix primer coat complete as required & as per directions of the engineer-in-charge for the following sizes:	4,544.00	9,65,600.00
606	4.00	50mm dia - Providing and fixing reinforced neoprene rubber vibration eliminators/expansion joints (to provide relief from stresses at pipe flanges) suitable for upto 20 kg/cm2 pressure, as per specification of the manufacturers complete as required and as specified complete as per directions of the engineer-in-charge.	3,360.00	13,440.00
607	4.00	65mm dia - Providing and fixing reinforced neoprene rubber vibration eliminators/expansion joints (to provide relief from stresses at pipe flanges) suitable for upto 20 kg/cm2 pressure, as per specification of the manufacturers complete as required and as specified complete as per directions of the engineer-in-charge.	5,160.00	20,640.00
608	16.00	80mm dia - Providing and fixing reinforced neoprene rubber vibration eliminators/expansion joints (to provide relief from stresses at pipe flanges) suitable for upto 20 kg/cm2 pressure, as per specification of the manufacturers complete as required and as specified complete as per directions of the engineer-in-charge.	6,600.00	1,05,600.00
609	16.00	100mm dia - Providing and fixing reinforced neoprene rubber vibration eliminators/expansion joints (to provide relief from stresses at pipe flanges) suitable for upto 20 kg/cm2 pressure, as per specification of the manufacturers complete as required and as specified complete as per directions of the engineer-in-charge.	7,800.00	1,24,800.00
610	4.00	150mm dia - Providing and fixing reinforced neoprene rubber vibration eliminators/expansion joints (to provide relief from stresses at pipe flanges) suitable for upto 20 kg/cm2 pressure, as per specification of the manufacturers complete as required and as specified complete as per directions of the engineer-in-charge.	11,040.00	44,160.00
611	10.00	150 mm dia - Providing & fixing of Stainless Steel double flange suction " Y" type strainer fabricated out of minimum 1.2 mm thick Stainless Steel sheet with 3 mm dia. perforation holes including nuts, bolts and 3 mm thick rubber insertion complete & tested to 16 Kg/Sq.cm pressure complete as required and as specified complete as per directions of the engineer-in-charge.	12,636.00	1,26,360.00
612	4.00	65mm dia - Providing and fixing C.I butterfly valve, class PN 1.6 as per I.S:13095 or BS:5155, including necessary nuts, bolts, gaskets / flanges etc., complete as required and specified by the engineer-in-charge.	3,565.20	14,261.00
613	22.00	80mm dia - Providing and fixing C.I butterfly valve, class PN 1.6 as per I.S:13095 or BS:5155, including necessary nuts, bolts, gaskets / flanges etc., complete as required and specified by the engineer-in-charge.	3,962.40	87,173.00
614	74.00	100mm dia - Providing and fixing C.I butterfly valve, class PN 1.6 as per I.S:13095 or BS:5155, including necessary nuts, bolts, gaskets / flanges etc., complete as required and specified by the engineer-in-charge.	5,622.00	4,16,028.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
615	10.00	150mm dia - Providing and fixing C.I butterfly valve, class PN 1.6 as per I.S:13095 or BS:5155, including necessary nuts, bolts, gaskets / flanges etc., complete as required and specified by the engineer-in-charge.	7,096.80	70,968.00
616	4.00	50mm dia - Providing and fixing forged brass ball valve having stainless steel / brass ball tested to 20 kg/cm2 complete as required and as specified complete as per directions of the engineer-in-charge.	2,520.00	10,080.00
617	4.00	50 mm nominal bore - Providing & fixing C.I horizontal/vertical type non return valve (dual plate) conforming to IS:5312 with C.I. body, SS Disc, SS stem, EPDM seal, complete with companion flanges, bolts, nuts, washers & inserted rubber gasket complete as required to I.S:5312, Part-I, dual plate type, class PN 1.6.	5,400.00	21,600.00
618	16.00	80mm nominal bore - Providing & fixing C.I horizontal/vertical type non return valve (dual plate) conforming to IS:5312 with C.I. body, SS Disc, SS stem, EPDM seal, complete with companion flanges, bolts, nuts, washers & inserted rubber gasket complete as required to I.S:5312, Part-I, dual plate type, class PN 1.6.	6,000.00	96,000.00
619	4.00	200 mm dia - Providing and fixing 750 mm long hot dipped G.I. Puddle flanges for water tanks as per I.S. 1239 (Class C) with 6mm thick M.S. Plate of suitable size and welded alround the pipe fixed in walls, beams and top slab of R.C.C tanks, complete with all details in all respects and as per drawing.	6,000.00	24,000.00
620	16.00	150mm dia - Providing and fixing 750 mm long hot dipped G.I. Puddle flanges for water tanks as per I.S. 1239 (Class C) with 6mm thick M.S. Plate of suitable size and welded alround the pipe fixed in walls, beams and top slab of R.C.C tanks, complete with all details in all respects and as per drawing.	4,500.00	72,000.00
621	78.00	100mm dia - Providing and fixing 750 mm long hot dipped G.I. Puddle flanges for water tanks as per I.S. 1239 (Class C) with 6mm thick M.S. Plate of suitable size and welded alround the pipe fixed in walls, beams and top slab of R.C.C tanks, complete with all details in all respects and as per drawing.	3,375.00	2,63,250.00
622	600.00	Providing orange colour safety foot rest of minimum 6 mm thick plastic encapsulated as per IS : 10910 on 12mm dia steel bar conforming to IS : 1786 having minimum cross section as 23 mmx25mm and over all minimum length 263 mm and width as 165mm with minimum 112 mm space between protruded legs having 2 mm tread on top surface by ribbing or chequering besides necessary and adequate anchoring projections on tail length on 138 mm as per standard drawing and suitable to with stand the bend test and chemical resistance test as per specifications and having manufacture's permanent identification mark to be visible even after fixing, including fixing in manholes with 30x20x15 cm cement concrete block 1:3:6 (1 cement : 3 coarse sand : 6 graded stone aggregate 20 mm nominal size) complete as per design.	409.88	2,45,928.00
623	12.00	100mm dia - Providing and fixing insect-proof coupling to vent pipes of overhead tank with threaded or flanged joints, including G.I. flanges, nuts, bolts, 3mm thick rubber insertions complete.	1,740.00	20,880.00
624	2,000.00	Providing and Fixiing extra heavy duty, water tight double sealed Ductile iron Circular Manhole cover and frames specially casted for placing over the UG Water tanks with lifting and locking arrangements as per approved sample, complete in all respect including fixing in PCC as per site Requirement .	180.00	3,60,000.00
625	1,000.00	Providing & fixing M.S. structural work fabricated from standard section e.g. M.S Flat Strips, Round Bars, angles, channels, plates etc.. including cutting to size, drilling, welding, fixing either by welding to insert plates in RCC structural members including cutting and making good the walls, ceilings and floors or by dash fasteners. (As per the Instructions of the Project-in-Charge)	169.92	1,69,922.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
626	1.00	STP (Civil works will be paid in the respective items) Designing, Preparation of Shop Drawings, Supplying, Erection, Testing, Commissioning, handing over, operation & maintenance up to succesfull commissioning including getting approval of successful test results from approved Government pollution & environmental authorities, for 300 KLD Sewage Treatment Plant based on MBBR technology for cluster 6 (MLA&MLC) complete in all respects on a Turnkey Basis, as per Tender Document comprising Preamble, Technical Conditions, Technical Specifications, Data, Drawings, Annexures- I & II, Design Basis Report and any other documents attached with this Tender. (Any item not specifically mentioned in these sections but required for the successful completion including handing over, shall be included in the Quote by the Contractor.) Turnkey Cost for Designing, Supply, Installation, testing & Commissioning handing over, operation & maintenance upto successful commissioning, including purchase and usage of chemical / consumables for operation and maintenance of all Mechanical & Electrical Equipment, Piping, Valves & Accessories for the Complete Turnkey Sewage Treatment Plant as per approved Hydraulic Calculations, Design and Shop Drawings, as per details given in (but not restricted to) Annexures II. Electromechanical EquipmentsEqualization Tank Sewage Pumps: The pump sets shall be supplied with required accessories, valves, fittings, cables etc. & as per specification. Air Blower: Air Blowers of twin-lobe type (air cooled) for continuous service with construction in cast iron casing, supply complete with testing and commissioning etc.as specified and as required.Air Diffusers: Membrane diffusers in EPDM / High Grade Silicon material (Coarse & Fine Bubble as per requirements) with connections to air piping by threaded means, of tube/disc type as required as per process requirements complete with testing and commissioning etc.as specified and as required Sludge Return / Relift Pump: Centrifugal Sludge Return / Re-lift pumps for the transfer of sludge from secondary clarifier complete in all respects and as per specifications.Agitator for Anoxic tankSludge Loading/Disposal Pump: Screw Type Sludge loading / Disposal pump, complete in all respects and as per specifications. Filter Feed Pumps: In-line vertical multistage centrifugal clear water pump set of approved make, complete in all respects and as per specifications.Hydropneumatic Pumping System With Variable Frequency Drive: Supply, Installation, Testing and Commissioning of compact packaged type skid mounted, self contained variable frequency drive hydropneumatic system complete as required & as per specifications.(i) Flushing Water Supply pumps(ii) Horticulture Water supply PumpsPressure Sand Filter: Providing and fixing vertical Dual Media Pressure Filter with suitable foundation boits & other accessories, mounting frame, complete with testing and commissioning etc.as required & as specified.Activated Carbon Filter: Providing and Fixing of Activated carbon filter as per Manufacturer's standard and testing & commissioning complete.Dosing System for CCT and Anoxic tank: Providing and fixing chemical dozing system of approved make with all standard accessories & structural arrangement including suitable foundation bolts & other accessories etc. complete as required and as specified.Drainage Sump Pumps: Providing and fixing compact dry motor submersible pumps of suitable rating. The pump sets shall be supplied with required accessories & as per specifications with all accessories and control system.Sludge Handling Mechanism (Centrifuge): Providing and fixing of sludge handling arrangement (Centrifuge bowl type) complete with testing & commissioning as required and as specified.UV for Supply to Flushing/Garden Line: Providing and installation of Online UV system complete with testing & commissioning as required and as specified.Sludge Trolley: Fabrication and supply of sludge trolley for transport of sludge complete as per requirements as specified.MBBR Bio-Media complete as per specifications.Tubesettler Media complete as per specifications. Bar Screens: Providing and fixing manually cleaned Bar Screens, to remove coarse and fine material in the water made up of FRP/SS complete as required and as specified, consisting of coarse screen & fine screen.PIPING AND VALVES ACCESSORIESG.I. Pipe: Provding and fixing heavy duty G.I. pipe confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above complete as required & as per specifications.uPVC Threaded Water Pipes: Providing and fixing uPVC threaded water pipes (I.S:4985-2000) Class - 3 (Min. 6 Kg/cm2) complete as required & as per specifications.Butterfly Valves: Providing & fixing butterfly valve of rating PN 25, wafer type, in cast iron body with Ductile Iron disc, EPDM seal, SS single piece shaft, conforming to IS-13095,	85,00,000.00	85,00,000.00
627	1.00	STP (Civil works will be paid in the respective items) Designing, Preparation of Shop Drawings, Supplying, Erection, Testing, Commissioning, handing over, operation & maintenance up to succesfull commissioning including getting approval of successful test results from approved Government pollution & environmental authorities, for 150 KLD Sewage Treatment Plant based on MBBR technology for (AIS) complete in all respects on a Turnkey Basis, as per Tender Document comprising Preamble, Technical Conditions, Technical Specifications, Data, Drawings, Annexures- I & II, Design Basis Report and any other documents attached with this Tender. (Any item not specifically mentioned in these sections but required for the successful completion including handing over, shall be included in the Quote by the Contractor.) Turnkey Cost for Designing, Supply, Installation, testing & Commissioning handing over, operation & maintenance upto successful commissioning, including purchase and usage of chemical / consumables for operation and maintenance of all Mechanical & Electrical Equipment, Piping, Valves & Accessories for the Complete Turnkey Sewage Treatment Plant as per approved Hydraulic Calculations, Design and Shop Drawings, as per details given in (but not restricted to) Annexures II. Filter Feed Pumps: In-line vertical multistage centrifugal clear water pump set of approved make, complete in all respects and as per specifications.Hydropneumatic Pumping System With Variable Frequency Drive: Supply, Installation, Testing and Commissioning of compact packaged type skid mounted, self contained variable frequency drive hydropneumatic system complete as required & as per specifications.(i) Flushing Water Supply pumps(ii) Horticulture Water supply PumpsPressure Sand Filter: Providing and fixing vertical Dual Media Pressure Filter with suitable foundation boits & other accessories, mounting frame, complete with testing and commissioning etc.as required & as specified.Activated Carbon Filter: Providing and Fixing of Activated carbon filter as per Manufacturer's standard and testing & commissioning complete.Dosing System for CCT and Anoxic tank: Providing and fixing chemical dozing system of approved make with all standard accessories & structural arrangement including suitable foundation bolts & other accessories etc. complete as required and as specified.Drainage Sump Pumps: Providing and fixing compact dry motor submersible pumps of suitable rating. The pump sets shall be supplied with required accessories & as per specifications with all accessories and control system.Sludge Handling Mechanism (Centrifuge): Providing and fixing of sludge handling arrangement (Centrifuge bowl type) complete with testing & commissioning as required and as specified.UV for Supply to Flushing/Garden Line: Providing and installation of Online UV system complete with testing & commissioning as required and as specified.Sludge Trolley: Fabrication and supply of sludge trolley for transport of sludge complete as per requirements as specified.MBBR Bio-Media complete as per specifications.Tubesettler Media complete as per specifications. Bar Screens: Providing and fixing manually cleaned Bar Screens, to remove coarse and fine material in the water made up of FRP/SS complete as required and as specified, consisting of coarse screen & fine screen.PIPING AND VALVES ACCESSORIESG.I. Pipe: Provding and fixing heavy duty G.I. pipe confiming to IS. 1239 upto 150 mm and IS 3589 for dia 200 mm and above complete as required & as per specifications.uPVC Threaded Water Pipes: Providing and fixing uPVC threaded water pipes (I.S:4985-2000) Class - 3 (Min. 6 Kg/cm2) complete as required & as per specifications.Butterfly Valves: Providing & fixing butterfly valve of rating PN 25, wafer type, in cast iron body with Ductile Iron disc, EPDM seal, SS single piece shaft, conforming to IS-13095, complete as	55,00,000.00	55,00,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
628	6.00	Supply, Installation, Testing and Commissioning of Indoor floor mounted metal clad, 33 KV 800A VCB Panel with 1 Nos. VCBs suitable for 50Hz 3-phase system, suitable for 26.3 to 31.5kA/3sec short circuit withstand capacity & 26.3-31.5kA/1sec Internal Arc capacity . Switchgear Panel enclosure of sheet steel (preferably Aluzinc), dust tight, vermin proof, totally enclosed cubicle floor mounting, free standing type with single break, horizontally drawout type breaker with trip free mechanism as per latest standard i.e. IS/IEC 62271-200 as amended up to date and as per Technical specifications, IP4X for VCB Panel & IP55 with Type tested enclosure. Switchgear Panel shall be electrically & mechanically interlocked as per IEC 62271-1, full voltage insulated copper Busbar with heat shrinkable sleeving, complete with suitable metering & protection devices, breaker featured with mechanical ON-OFF indicator with hand trip device and all accessories such as shunt trip coil, motorized & manually operated spring charging mechanism, emergency trip push buttons, auxiliary switch of 2NO + 2NC, interconnections, space heaters, panel earthing etc. and equipped with following switchgear and accessories including connection suitable for 3x400sqmm XLPE 33kV cable (cable entry from bottom) to be connected through heat shrinkable jointing material etc as required and as directed by Engineer In Charge/departmental authorities as per detailed technical specifications and approved make.All Bi-Directional multifunction meters true rms value sensing type with RS485 ports for communication in Modbus; power / energy meters (of accuracy class 0.2) for down loading data to PC. supply voltage monitoring relay for monitoring and control incoming 33KV supply with trip & alarm contacts with adjustable high & low value limits for voltage & frequency complete with suitable port for downloading historical data to PC. All VCBs with communicable protection relays with ports wired out and with 4NO + 4NC integral aux. contact plus cradle aux. contact wired out for monitoring of each type of fault trip, OPEN / CLOSE / CRADLE POSITION & relay trip settings from PC. All VCBs complete with T/N/C switches, lamp indications, shunt trip healthy check lamps, trfo. fault annunciators & hooter etc. each VCB panel comprising the following: ICOG- Nos. 800 Amp. VCB. 26.3 to 31.5KA, 3 No. dual core CTs of approved rating of 7.5VA burden max and accuracy Class 0.2 or as per the arrived load demand & selected transformer rating as directed by Engineer-InCharge for metering and class 5P10 for protection, 3 No. Cast Resin 33000V/v3/110V/v3/110V/v3 PT Class 0.2/3P accuracy and 30VA burden max with and protection fuses / MCB. 1 No. Digital voltmeter with selector switch, 1 No. Digital Ammeter with selector switch, 1 No. Microprocessor based numerical relays with O/L, E/F and S/C protection with Integrated Arc sensing feature alongwith trip/lockout / antipumping / aux. relays.1 No. Bi Directional multi function meter, Set of MCBs for Panel AC/DC, Set of MCBs for Main AC/DC,Set of Indication lamps LED types,TNC Switch, L-R Switch, Pushbuttons for ON-OFF,1 set of Mechanical & Electrical interlocking set Incomer Surge Protection Device (SPD) required, 1 set of earthing trunck,1 trolley for each 4 VCB as a Complementary,1 No. DC self power pack suitable for 3 trips with 110V output, complete etc for control circuit. Makes:ABB/Schneider/Seimens/Kirlos kar/Amara Raja/Megawin/L&T or as directed by Eingineer In Charge and as per aproved make. Note: The contractor or OEM is completely held responsible for replacing of spares or any required consumables during defects liability period for a period of 2 years from the date of handing over to client as detailed in technical specifications..33 KV HT PANEL (In addition to the above requirement the panel should be as per detailed technical specifications / Andhra Pradesh Central Power Distribution Company Limited). Makes:ABB/Schneider/Seimens/Kirlos kar/Amara Raja/Megawin/L&T	11,93,412.00	71,60,472.00
629	3.00	Supply, Installation, Testing and Commissioning of Indoor type floor mounted metal clad, 33 KV 800A VCB Panel with 7 Nos. VCBs (2-I/C, 4-O/G, 1-B/C) suitable for 50Hz 3-phase system, suitable for 26.3-31.5kA/3sec short circuit withstand capacity & 26.3-31.5kA/1sec Internal Arc capacity. Switchgear Panel enclosure of sheet steel (preferably Aluzinc), dust tight, vermin proof, totally enclosed cubicle floor mounting, free standing type with single break, horizontally drawout type breaker with trip free mechanism as per latest standard i.e. IS/IEC 62271-200 as amended up to date and as per Technical specifications, IP4X for VCB Panel & IP55 with Type tested enclosure. Switchgear Panel shall be electrically & mechanically interlocked as per IEC 62271-1, full voltage insulated copper Busbar with heat shrinkable sleeving, complete with suitable metering & protection devices, breaker featured with mechanical ON-OFF indicator with hand trip device and all accessories such as shunt trip coil, motorized & manually operated spring charging mechanism, emergency trip push buttons, auxiliary switch of 2NO + 2NC, interconnections, space heaters, panel earthing etc. and equipped with following switchgear and accessories including connection suitable for 3x400sqmm XLPE 33kV cable (cable entry from bottom) to be connected through heat shrinkable jointing material etc as required and as directed by Engineer In Charge/departmental authorities as per detailed technical specifications and approved make.All Bi Directional multifunction meters true rms value sensing type with RS485 ports for communication in Modbus; power / energy meters (of accuracy class 0.2) for down loading data to PC. supply voltage monitoring relay for monitoring and control incoming 33KV supply with trip & alarm contacts with adjustable high & low value limits for voltage & frequency complete with suitable port for downloading historical data to PC. 630	6.00	Supply, installation, testing and commissioning of floor mounted, dust, damp and vermin proof, cubicle, H. T. Metering Panel made out of 2 mm thick CRCA sheet steel complete with electronic trivector meter, CT?s of 50/25/5+5 amp, 0.2S class 15 VA Burden or as per the arrived load demand & selected transformer rating as directed by Engineer-InCharge, and PT?s of 33 KV / v3 , 110 V / v3 , 50 VA, conforming to relevant IS standard and complete as required and as directed by Engineer In Charge/departmental authorities as per detailed technical specifications and approved make. CT?s, PT?s and trivector meter shall be got tested and approved from local electricity supply authority.The GA drawing also shall be got approved from State authorities before fabrication.The unit shall have provision for sealing and Acrylic window shall be provided to facilitate meter reading. Supply of HT Meter Mounting Box as required as per APCPDCL Dept Norms with sealing arrangement, box sizing, window, TB, to accomidate HT Meter as per APCPDCL norms and HT meter specification, CT and PT ratio etc shall also be as per APCPDCL standards and requirements.33 KV APCPDCL /APSEB Metering Cubicle - Outdoor Type (In addition to the above requirement the panel should be as per detailed technical specifications / Andhra Pradesh Central Power Distribution Company Limited).	5,50,000.00	33,00,000.00
631	3.00	Supply, Installation, Testing and Commissioning of 110V- 200AH MF VRLA battery bank consisting of 2V-200AH-55nos with complete acessories as per enclosed specificaitons. TYPE OF BATTERY : 110V/200AH VRLA BATTERY OF 55 CELLS. Battery rack of suitable size with requried no of stackings to fit for 55 nos battery cells made of MS HRCA sheet duly painted with approved colour as per OEM .All cell connectors are made up of lead coated copper bus bar and batteries shall be interconnected with requried copper cabling of required size and lugs, all the connectors shall be suitable to withstand up to current rating of 150A as per technical specifications and as directed by engineer in charge .Makes for battery: Exide/Racket/Quanta/Amaraja	2,82,134.00	8,46,402.00
632	3.00	Supply, Installation, Testing and Commissioning of 110V-50Amps Float Cum Boost Charger-FCBC suitable for 110V/200AH VRLA Battery of 55 cells comprising of the follwoing specifications: FULL WAVE FULL CONTROLLED Input- Three phase Input : 415V AC ±10% (Three Phase, Three/Four Wire), Frequency : 50Hz ± 5% OUTPUT: Output Currents : 50A DC, Ripple : 2% RMS (Without Battery connected), Efficiency : > 80% Float Voltage: 123.75V DC (2.25VPC x 55 Cells) Boost Voltage: 126.5V DC (2.3VPC x 55 Cells) Load Voltage (DC Voltage that is applied on the Load): 123.75V DC when Charger operates in Float Mode 126.5V DC when Charger operates in Boost Mode Voltage regulation: (FLOAT /BOOST/AUTO) Load variation : 10-100% Line variation : ± 10% Frequency Variations : ± 5% Temperature Variations : 0 ºC to +50 ºC Battery charger shall be provided with suitable indications lamps for FLOAT ON, BOOST ON, CHARGER ON, MAINS ON, CHARGER OVER VOLTAGE, CHARGER UNDER VOLTAGE, BATTERY FUSE FAIL, SCR FUSE FAIL, LOAD UNDER VOLTAGE, LOAD OVER VOLTAGE Shall have LDC display for all techical parameters to show , requried alarm with buzzer shall be provided, potetnial free contacts, necessary protection devices, controls & switches (DCDB of required nos as per site conditions and specs/SLD) etc with suitable IP raitng 42, operating temperature -5 deg C to 50 deg C, Noise level <70 dB etc as per technical specifications for finished job work and as directed by Engineer In-Charge with DCDB . Make: Amaraja/Green Secure Energy	2,38,480.00	7,15,440.00

633	1,350.00	Supply,Transportation, Installation, testing and commissioning of 3C X 400 Sq.mm. (E) XLPE HT cable insulated IS:7098/II FRLS H.T.cable for working voltage 33 K.V.Earthed with Stranded Compacted Circular Aluminium Conductor Screened with Extruded Semiconducting compound, XLPE Insulated Screened with extruded semi-conducting compound in combination with Copper Tape, cores laid up, inner sheath of Thermoplastic tape, galvanised flat steel strip armoured and overall Extruded PVC Type ST- 2 Outer Sheathed cable with cable route markers to be provided for every 20 mtrs complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Make: Torrent / Universal / Havells / KEI /Polycab/Gloster/RR Kabel/RPG	4,816.00	65,01,600.00
634	48.00	Supply,Transportation, installation, testing and commissioning of 3C X 400 Sq.mm. (E) XLPE HT cable heat shrinkable type indoor terminations/joint kit of approved make suitable for XLPE insulated 33 KV cable, with required components, prepration of cable ends, testing complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Make: Raychem /M seal/ Denson/ Multy/ TransealHongshang	23,096.00	11,08,608.00
635	6.00	Supply,Transportation, installation, testing and commissioning of 3C X 400 Sq.mm. (E) XLPE HT cable heat shrinkable type outdoor terminations/joint kit of approved make suitable for XLPE insulated 33 KV cable, with required components, prepration of cable ends, testing complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Make: Raychem /M seal/ Denson/ Multy/ TransealHongshang	32,479.00	1,94,874.00
636	108.00	Supply, installation, testing and commissioning of 1600 Amp, up to 80 kA breaking capacity (100% Neutral busbar) sandwich busduct system made of CRCA sheet/Hot Galvanized steel encloser of thickness not less than 1.5mm having degree of protection of IP 55/IP 65 indoor/Outdoor as per site requirement and as per IEC/EN 61439-6, PVC/Plastic insulated reinforced with glass fibre four strip ALUMINIUM busbar in convenient sections including end cover units suitable for 415 volts 3 phase, 4 wire, 50 Hz A.C. system etc., with necessary joints, fire barrier at each floor, provision of tapping at each floor/every meter, continuous earthing with 2 no of aluminum strip of suitable size (one on each side) including GI clamping brackets, angle iron brackets, steel fasteners, connecting to earth system as required . Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	28,228.00	30,48,624.00
637	27.00	Supply and fixing of 1600 Amps Horizontal / Vertical bends for sandwich Bus Duct including all accessories & Supporting structure as complete as required and as per technical specifications and as directed by engineer in charge. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	24,802.00	6,69,654.00
638	18.00	Supply and fixing of 1600 Amps Copper Flexibles for three phases and neutral for Air Insulated / sandwich Busduct etc as complete as required and as per technical specifications and as directed by engineer in charge.. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	52,704.00	9,48,672.00
639	18.00	Supply, installation, testing and commissioning of 1000 Amp, up to 50 kA breaking capacity (100% Neutral busbar) sandwich busduct system made of CRCA sheet/Hot Galvanized steel encloser of thickness not less than 1.5mm having degree of protection of IP 55/IP 65 indoor/Outdoor as per site requirement and as per IEC/EN 61439-6, PVC/Plastic insulated reinforced with glass fibre four strip ALUMINIUM busbar in convenient sections including end cover units suitable for 415 volts 3 phase, 4 wire, 50 Hz A.C. system etc., with necessary joints, fire barrier at each floor, provision of tapping at each floor/every meter, continuous earthing with 2 no of aluminum strip of suitable size (one on each side including GI clamping brackets, angle iron brackets, steel fasteners, connecting to earth system as required. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	21,538.00	3,87,684.00
640	6.00	Supply and fixing of 1000 Amps Horizontal / Vertical bends for sandwich Bus Duct including all accessories & Supporting structure as complete as required and as per technical specifications and as directed by engineer in charge.. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	20,070.09	1,20,421.00
641	6.00	Supply and fixing of 1000 Amps Copper Flexibles for three phases and neutral for Air Insulated / sandwich Busduct etc as complete as required and as per technical specifications and as directed by engineer in charge.. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	46,176.54	2,77,059.00

642	990.00	Supply, installation, testing and commissioning of 800 Amp, up to 80 kA breaking capacity (100% Neutral busbar) sandwich busduct system made of CRCA sheet/Hot Galvanized steel encloser of thickness not less than 1.5mm having degree of protection of IP 55/IP 65 indoor/Outdoor as per site requirement and as per IEC/EN 61439-6, PVC/Plastic insulated reinforced with glass fibre four strip ALUMINIUM busbar in convenient sections including end cover units suitable for 415 volts 3 phase, 4 wire, 50 Hz A.C. system etc., with necessary joints, fire barrier at each floor, provision of tapping at each floor/every meter, continuous earthing with 2 no of aluminum strip of suitable size (one on each side0 including GI clamping brackets, angle iron brackets, steel fasteners, connecting to earth system as required and as per technical specifications and as directed by engineer in charge. .Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	19,580.00	1,93,84,200.00
643	216.00	Supply, Erection, Testing and Commisioning of 100A FP 10KA Ics MCCB Tap off Boxes for tapping supply from vertical rising mains (for GF to 12th floor) with necessary accessories and as per technical specifications and as directed by engineer in charge..Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	16,000.00	34,56,000.00
644	18.00	Supply and fixing of Flange end for 800 Amps for sandwich bus ducts and as per technical specifications and as directed by engineer in charge.. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/ C&S/ Advance-Anant.	29,533.00	5,31,594.00
645	18.00	Supply and fixing of 800 Amps Copper Flexibles for three phases and neutral for Air Insulated / sandwich Busduct etc as complete as required and as per technical specifications and as directed by engineer in charge. Makes: Legrand (Zucchini) Lauritz Knudsen (Formerly L&T)/ Schneider/C&S/Advance-Anant.	43,893.00	7,90,074.00
646	9.00	Supply, Transportation, Installation, Testing and Commissioning of copper wound Transformers 1000kVA, 33/0.433 KV, 3ph, 50 Hz, DYN 11, ONAN type , Standard accessories, winding temperature rise of 45°C/40°C first fill oil, having permissible total loss values as per the latest amendment no.4 of BIS in march 2021 (as per latest) for 33 KV as per energy efficiency level - 2 at basic Insulation level conforming to IS-2026 (Part- I to Part - II), latest amended and IS 1180 Part-I described as above with Cable box on HV side and Bus duct on LV Side , ON load Tap changer(OLTC) with RTCC etc., with initial filling of oil as per IS 335 complete required for successful commissioning of Transformer and as per technical specifications and as directed by engineer in charge..Makes: Esennar/ Voltamp/ Kirloskar/ CG /ABB /Alstom /Siemens/Schneider	35,90,828.08	3,23,17,453.00
647	6.00	Supply Installation Testing And commissioning of 625kVA CPCB IV+ DG Set complete with 1500 RPM Diesel Engine of suitable BHP & AC Brush less Alternator mounted on a common base Frame & coupled through a flexible coupling or close coupled. Alternator 1. 1500 RPM, 1P or 3P, Brushless type, screen protected, revolving field, Self-excited alternator conforming to IS/IEC 60034-1 IP23, with standard Alternator Protection (over voltage, over speed & Under voltage) 2. A reliable long life with superior class 'H' insulation with temperature rise to Class H Diesel Engine: Engine: Engine should comprise of Silencer, Electronic governor from >25 KVA & above, suitable rating battery , Battery charging alternator, battery charger , Inbuilt Fuel tank with fuel pipe, AVM pads , Control panel with 3P MCCB of suitable rating with short circuit protections (25kA,36kA, 50kA) with microprocessor based controller indicating genset parameters (i.e. volt, amps, KWH, KVAR, Hrs etc.), The diesel engine shall be capable of providing 10% overload for 1 Hr for every 11 Hrs of continuous running at full load. The DG set shall be supplied as per OEM specifications and shall be tested at site along with below. 1. CRDI Engine >25 KVA DG set 2. Water cooled Radiator coupled to engine 3. Dry type air cleaner with service indicator 4. First fill of lube oil, Coolant & first fill of Diesel 5. Electrical starter motor with soft start System 6. Battery charging alternator 7. Remote Monitor system >58.5 KVA & Above 8. 2 years / 5000 Hrs Warranty from commissioning or 30-month form supply inclduing AMC & requried consumables from the date of handing over to client for a period of 24 months. 9. Emission control system - EGR & (DOC, SCR for >75 KVA DG set) 10.10 Mtrs Exhaust pipe from Silencer Genset Controller: 1. Microprocessor based genset monitoring, metering and control system with full graphics LCD display for easy front panel access. 2. AMF relay, manual and remote start / stop modes for 1-ph & 3-ph gensets 3. Backlit and full graphics display with power saving feature 4. Engine parameter monitoring -Lube oil pressure, Engine coolant temperature, Fuel level, Battery voltage, Engine running hours 5. AC Alternator parameter monitoring -Voltage L-N & L_L, Current, kW, kVA (Phase & Total), Frequency, kWH, PF 6. Genset Protection: Engine: Low lube oil pressure, High coolant temperature, Battery High/Low Volts, Fail to Start, Sensor failure, Low fuel level, Overspeed AC Alternator: Over/Under Voltage, Over/Under, Frequency, Loss of AC sensing, Over frequency, Over Current, kW Overload, Unbalancing load 7. Maintenance notification based on Engine Run Hour & due date 8.Communication: USB port, RS485, CAN 9.30-50 Event logs Acoustic Enclosure: 1. Specially designed to meet stringent MOEF/CPCB IV+ norms 2. Weatherproof, powder coated Acoustic enclosure for DG set for sound attenuation fabricated from 1.2 mm / 1.6 mm CRCA sheet steel (structure) with side wall fabricated from 1.2mm /1.6 mm CRCA sheet and filled with PU Foam/Rockwood for Fire retardant acoustic and for better safety 3. Designed to operate in extreme climatic conditions in temperatures ranging from -10 deg to 55 deg without any external aid 4. Fabricated base frame with AVM pads. 5. Noise level is less than 75 db (A) at a distance of 1 Mtrs as per CPCB norms, complete in all respect and as directed by Engineer in Charge: Engine Makes:Caterpillar/Perkins/Cummins/Greaves/KOEL Alternator Make:Leroy somer/Crompton Greaves/Stamford	74,16,955.00	4,45,01,730.00

667	1.00	Design, fabrication, assembling, wiring, supply, testing at works, packaging, forwarding to site, installation, testing & commissioning of Main LT Panel for Club House as per latest IEC 61439 (TTA Design), with a set of Automatic Fire Supression System (AFSS) complete with fire extinguisher of suitable capacity on either side of panel including with Fire snibber & fire detection tube through out the length of the panel including incoming & outgoing feeders, cable chambers etc as requried and fabricated with 2mm thick CRCA sheet steel in cubicle formation, compartmentalized, Form 4B construction, free standing floor mounted, dust and vermin proof with reinforcement of suitable size angle iron, channel, `T? sections and / or flats wherever necessary. 3 mm thick cable gland plates shall be provided on top as well as at the bottom of the panels. Panels shall be treated with all anticorrosive process before powder coating as per specifications and final approved shade. 2 Nos. earthing terminals shall be provided for all distrtibution panels. Panels shall be suitable for 415V, 3 phase, 4 wire, 50 HZ supply system. Lifting hooks shall also be provided in case of large panels. Approval shall be taken for each panel in the form of shop drawings before fabrication. Galvanised hardwares with zinc passivation shall be used in fabrication of panels. MP based release to be provided for above 2000A breakers. EB Incomer: 1 No. 1000A 50KA 4P ACB. 1 No. Mult Fuction Enegy meter with BMS Compitable (KWH+KW+A+V+F with RS - 485 port) , 3 set - 1000/5A CT's for metering, APFCR 1 set - RYB LED type indicating lamps , 1 set - Control MCB with Neutral link , 50kA Surge Protection device 1 set - CBCT & Earth leakage relay. DG Incomer: 1 No. 1000A 50KA 4P ACB. 1 No. Mult Fuction Enegy meter with BMS Compitable (KWH+KW+A+V+F with RS - 485 port) , 1 set - 1000/5A CT's for metering , 1 set - RYB LED type indicating lamps , 1 set - Control MCB with Neutral link , 1 set - Earth leakage relay, Bus bar: 1 set - 1000A, 4Wire, 50KA, 415V, TPN Aluminium busbars, interconnections with colour coded heat shrinkable sleeves and SMC Busbar supports. Outgoings: 2 Nos. 630A FP 50KA FP ACB, 2nos of 400A FP MCB. 8nos of 160A FP MCBs, 2nos of 125A FP MCBs, 6nos of 63A, FP MCCBs each outgoing feeder shall have dual source energy metet with required size of CTs. all ACB shall be EDO TYPE (Motorised) MP based with O/C, S/C, E/F & U/V (LSIG) protection and confirms to IS 13947-2, IEC 60947-2 and BS-EN 60947 with display and 20 faults History backup with BMS compatible communication ports. Separate DC bus shall be provided with required control transformers/MCB control, supporting insulators, sleeves etc of required rating for control circuit system. All panels shall be of Top / Bottom cable entry. Panels shall be extandable type on either ends complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. ACB Makes: Siemens/ Lauritz Knudsen (Formerly L&T)/ Schneider /Legrand /C&S /HPL, MCCB make: Lauritz Knudsen (Formerly L&T)- D shine / Schneider-CVS/Legrand ?(DP X3/DRX)/ Siemens- 3VL / Hager-h3/C&S -Winbreak/HPL-Techno MCB Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus) Note: Approval shall be taken for each panel in the form of shop drawings & scheme before fabrication. all energy meter will be connected in to the Energy Billing system for monitoring, mesureing, recording and billing purpose of all electrical parameters including prinitout purpose. all breakers wil be connected to the Intigrated Building Management System for Swithcgear ON/OFF/TRIP purpose.	21,78,450.00	21,78,450.00
668	2.00	Design, fabrication, assembling, wiring, supply, testing at works, packaging, forwarding to site, installation, testing & commissioning of Main LT Panel-1 (TTA design) as per latest IEC 61439 , with a set of Automatic Fire Supression System (AFSS) complete with fire extinguisher of suitable capacity on either side of panel including with Fire snibber & fire detection tube through out the length of the panel including incoming & outgoing feeders, cable chambers etc as requried and fabricated with 2mm thick CRCA sheet steel in cubicle formation, compartmentalized, Form 4B construction, free standing floor mounted, dust and vermin proof with reinforcement of suitable size angle iron, channel, `T? sections and / or flats wherever necessary. 3 mm thick cable gland plates shall be provided on top as well as at the bottom of the panels. Panels shall be treated with all anticorrosive process before powder coating as per specifications and final approved shade. 2 Nos. earthing terminals shall be provided for all distrtibution panels. Panels shall be suitable for 415V, 3 phase, 4 wire, 50 HZ supply system. Lifting hooks shall also be provided in case of large panels. Approval shall be taken for each panel in the form of shop drawings before fabrication. Galvanised hardwares with zinc passivation shall be used in fabrication of panels. MP based release to be provided for above 2000A breakers. EB Incomer: 1 No. 1600A 50KA 4P ACB. 1 No. Mult Fuction Enegy meter with BMS Compitable (KWH+KW+A+V+F with RS - 485 port) , 3 set - 1600/5A ,10VA, CL 1.0, CT's for metering & APFCR , 1 set - RYB LED type indicating lamps , 1 set - Control MCB with Neutral link , 80kA Surge Protection device 1 set - CBCT & Earth leakage relay. S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
726	219.00	Supply,Transportation, installation, testing and commissioning of earthling as per IS 3043 with perforated 3 mtr long 40 mm dia B class GI pipe including all accessories like nuts bolts reducer,nipple, wire meshed funnel andCCfinished chamber covered with hinged type with CI cover ,CI frame of size 300 X 300 mm and embodying the pipe complete with alternate layers of salt and coke /charcoal/bentonite powder testing earth resistance as required etc., complete as per detailed technical specifications and approved make. Make: Obo/Beterman/ISI approved or equivalent make as approved by the competent authority.	11,612.00	25,43,028.00
727	36.00	Supply,Transportation, installation, testing and commissioning of earthing as per IS 3043 with 100 mm CI pipe of 3 mtrs long including all accessories like nuts bolts reducer,nipple, wire meshed funnel and CCfinished chamber covered with hinged type with CI cover ,CI frame of size 300 X 300 mm and embodying the pipe complete with alternate layers of salt and coke /charcoal/bentonite powder testing earth resistance as required etc., complete as per detailed technical specifications and approved make. Make: Obo/Beterman/ISI approved or equivalent make as approved by the competent authority.	10,311.00	3,71,196.00
728	78.00	Supply,Transportation, installation, testing and commissioning ofearthing as per IS 3043 with copper earth plate of size 600 x 600 x 3.15 mm by embodying 3 to 4 mtr below the ground level with 40mm dia 'B' Class G.I Pipe by exacavating a pit to a depth of 3 to 4 Mtr in all soils for Sophisticated Electronic equipment as per National Electric Code and earth connection from electrode Copper strip of 25mm x 5mm x 200mm length to be bolted with nut bolts to G.I.pipe including 25mm x 3mm copper strip of 6Mtrs length connected from plate to Copper strip including filling with 20Kg Salt and 40Kg Charcoal or 40Kg bentonite powderincluding all accessories like nuts bolts reducer,nipple, wire meshed funnel and CCfinished chamber covered with hinged type with CI cover ,CI frame of size 300 X 300 mm ,testing earth resistance as required.etc., complete as per detailed technical specifications and approved make. (2 X'fer+2 DG Set). Make: Obo/Beterman/DEHN ISI approved	27,200.00	21,21,600.00
729	2,325.00	Supply and laying of 8 SWG Copper wire(0.16 Kgs/1 Mtr) Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/I DEHN SI approved	120.00	2,79,000.00
730	1,275.00	Supply and laying of 10 SWG Copper wire(0.028Kgs/1Mtr) Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	78.00	99,450.00
731	333.00	Supply and laying of 25mm x 6mm GI Flat(0.656 Kgs/Mtr) Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	110.00	36,630.00
732	915.00	Supply and laying of 75 mm x 10mm GI Flat(5.9 Kgs/mtr) Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	667.00	6,10,305.00
733	1,335.00	Supply and laying of 50 mm x 6mm GI Flat (2.36 Kgs/mtr) Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	236.00	3,15,060.00
734	975.00	Supply and laying of 40 mm x 6mm GI Flat (1.89 Kgs/mtr) Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	201.00	1,95,975.00
735	48.00	Supply and fixing of EARTH BUS -1 Mtr length of 40mm x 6mm G.I Strip with required no of holes, insualtors for supporting etc., including cost of all accessories and labour charges etc., complete in main LT panel room for earthing connectivity. Make: Obo/Beterman/DEHN ISI approved	467.00	22,416.00
736	42.00	Supply and fixing of EARTH BUS -1 Mtr length of 25mm x 6mm G.I Strip with required no of holes, insualtors for supporting etc., including cost of all accessories and labour charges etc., complete in main LT panel room for earthing connectivity. Make: Obo/Beterman/DEHN ISI approved	372.00	15,624.00
737	975.00	Supply and laying of 40 mm x 6mm Cu Flat Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	2,545.00	24,81,375.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
738	1,028.00	Supply and laying of 50 mm x 6mm Cu Flat Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	2,795.00	28,73,260.00
739	825.00	Supply and laying of 75 mm x 10 mm Cu Flat Earth wire/Strip in horizontal /Vertical run in Ground/surface/Recess including, revitting,soldering,saddles,making connection etc as required. Make: Obo/Beterman/DEHN ISI approved	8,071.00	66,58,575.00
740	13,293.00	Supply, installation, testing and commissioning of 8 mm Aluminum Round Conductor complete as specified in drawing & meets the requirements of DIN EN 50164-2 (VDE 0185 part 202) & VDE 0185-305 (IS/IEC 62305) and as directed by Engineer In Charge and as per technical speicifications and of approved make. Make: Obo/Beterman/ DEHN ISI approved	124.00	16,48,332.00
741	2,321.00	Supply, installation, testing and commissioning of Roof conductor holder for parapet- Polyamide Conductor holder: With M8 female thread or diameter 7mm, M8 Screw to connect the conductor holder. Weather and temperature resistant from -35 to +90 degree Celsius tested. Conductorholder @ 1 meter distance as per detailed technical specifications.Make: Obo/Beterman/DEHN ISI approved	69.00	1,60,149.00
742	10,806.00	Supply, installation, testing and commissioning of Polyamide roof cable holder for flat roof: DIN 48829 Form B1. Closed form with bottom. Filling weight 1Kg (frost-resistant concrete). Sleeve from polyethylene, black @ 1 meter distance as per detailed technical specifications. Make: Obo/Beterman/ DEHN ISI approved	178.00	19,23,468.00
743	186.00	Supply, installation, testing and commissioning of Fang Fix Junior system - Inclusive of Al intrception rod of 1Mtr length(10mm dia) , Quick mounting of the interception rod in the base using plug technology as per detailed technical specifications. Make: Obo/Beterman/ DEHN ISI approved	2,269.00	4,22,034.00
744	906.00	Supply, installation, testing and commissioning of cross universal connector: For T and cross connection, to route vertical down conductor /mesh formation made of hot dipped galvanised iron with necessary screws etc as required. Installed with 4 hexagonal bolts M8*25 with M8 hexagonal nuts as per detailed technical specifications. Make: Obo/Beterman/ DEHN ISI approved	182.00	1,64,892.00
745	186.00	Supply, installation, testing and commissioning of expansion piece with connector: For equalising temperature related length changes. Necessary on conductors length over 20 meters. For round conductor Rd 8/ALU.Connector: For T cross and parallel connectors. Quick installation using hexagonal bolt M10X30 high-grade hot dip galvanised. Conforms to the requirements according to DIN VDE 0185-305 (IS-IEC 62305)(2nos/expansion piece). as per detailed technical specifications. Make: Obo/Beterman/DEHN ISI approved	544.00	1,01,184.00
746	186.00	Supply, installation, testing and commissioning of Fang Fix Junior system - Inclusive of Al interception rod of 1Mtr length (10mm dia), Quick mounting of the interception rod in the base using plug technology. Make: Obo/Beterman/DEHN ISI approved	2,269.00	4,22,034.00
747	42.00	Supply, installation, testing and commissioning of Lightnig counter - To count no of lightning strike & it can record the date and time of the lightning incident also tested as per IEC 62561-6 as per detailed technical specifications. Make: Obo/Beterman/DEHN ISI approved or equivalent make as approved by the competent authority.	22,683.00	9,52,686.00
748	102.00	Providing earth electrode of low carbon steel rod, UL listed of 17.2 mm dia, 3 Mtr long, coated with copper of 254 microns thickness, CPRI tested for short time current withstand test of 25 kA, coating thickness, environmental test (Salt Mist Test), Bend test, Tensile strength, Yield / tensile ratio, Electrical Resistivity test, complete with clamps and 2 bags of (Earth plus ULTRA /TIRUMALA) high grade earthing compound IEC 62561-7 complaint Eco-friendly, Maintenance free, anti-corrosive, lead-free, super conductive, mineral based high-grade earthing compound, to enhance soil conductivity. With resistance <0.20 ohms-meter, should be leach proof & Sulphur free complete with earth inspection chamber of dimensions: width: 320 mm x 320 mm, Height : 192 mm, weight : 30 Kgs, Load bearing capacity : 5000 Kgs Make: Obo/Beterman/DEHN ISI approved	13,060.00	13,32,120.00
749	765.00	Supply,transporatation & installation of 100mm x 50mm x 1.6mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	424.00	3,24,360.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
750	525.00	Supply,transporatation & installation of 150mm x 50mm x 1.6mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	492.00	2,58,300.00
751	315.00	Supply,transporatation & installation of 300mm x 62.5mm x 2.0mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,088.00	3,42,720.00
752	285.00	Supply,transporatation & installation of 450mm x 62.5mm x 2.0mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,460.00	4,16,100.00
753	195.00	Supply,transporatation & installation of 600mm x 75mm x 2.0mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	2,020.00	3,93,900.00
754	75.00	Supply,transporatation & installation of 750mm x 75mm x 2.0mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	2,223.00	1,66,725.00
755	75.00	Supply,transporatation & installation of 900mm x 75mm x 2.0mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	2,615.00	1,96,125.00
756	180.00	Supply,transporatation & installation of 450mm x 50mm x 2.0mm of Hot Dipped Galvanized Iron ladder type cable trays with rungs at span of 250 mm including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/wall with suspenders and etc., complete. Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,028.00	1,85,040.00
757	225.00	Supply,transporatation & installation of 600mm x 75mm x 2.0mm of Hot Dipped Galvanized Iron ladder type cable trays with rungs at span of 250 mm including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/wall with suspenders and etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,270.00	2,85,750.00
758	165.00	Supply,transporatation & installation of 750mm x 75mm x 2.0mm of Hot Dipped Galvanized Iron ladder type cable trays with rungs at span of 250 mm including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/wall with suspenders and etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,346.00	2,22,090.00
759	75.00	Supply,transporatation & installation of 900mm x 75mm x 2.0mm of Hot Dipped Galvanized Iron ladder type cable trays with rungs at span of 250 mm including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/wall with suspenders and etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,429.00	1,07,175.00
760	90.00	Supply,transporatation & installation of 150mm x 50mm x 2.0mm of Hot Dipped Galvanized Iron Wire Mesh Type cable trays, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	796.00	71,640.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
761	75.00	Supply,transporatation & installation of 300mm x 50mm x 2.0mm of Hot Dipped Galvanized Iron Wire Mesh Type cable trays, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/H-Fab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	990.00	74,250.00
762	75.00	Supply,transporatation & installation of 450mm x 50mm x 2.0mm of Hot Dipped Galvanized Iron Wire Mesh Type cable trays, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. 773	263.00	Supply and fixing of 2 Modular Hot Dip galvanized 18 SWG Module box with earthing terminal. Makes: Legrand /Schneider / Crabtree/Lauritz Knudsen.	77.00	20,251.00
774	456.00	Supply and fixing of 3 Modular Hot Dip galvanized 18 SWG Module box with earthing terminal. Makes: Legrand /Schneider / Crabtree/Lauritz Knudsen.	108.00	49,248.00
775	135.00	Supply and fixing of 4 Modular Hot Dip galvanized 18 SWG Module box with earthing terminal.Makes: Legrand /Schneider / Crabtree/Lauritz Knudsen.	130.00	17,550.00
776	165.00	Supply and fixing of 6 Modular Hot Dip galvanized 18 SWG Module box with earthing terminal. Makes: Legrand /Schneider / Crabtree/Lauritz Knudsen.	176.00	29,040.00
777	68.00	Supply and fixing of 8 Modular Hot Dip galvanized 18 SWG Module box with earthing terminal. Makes: Legrand /Schneider / Crabtree/Lauritz Knudsen.	231.00	15,708.00
778	32.00	Supply and fixing of 12 Modular Hot Dip galvanized 18 SWG Module box with earthing terminal.Makes: Legrand /Schneider / Crabtree/Lauritz Knudsen.	278.00	8,896.00
779	23,483.00	Supply and fixing of 2 Modular Cover frames.Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	132.00	30,99,756.00
780	11,256.00	Supply and fixing of 3 Modular Cover frames..Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	147.00	16,54,632.00
781	1,575.00	Supply and fixing of 4 Modular Cover frames.Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	154.00	2,42,550.00
782	5,565.00	Supply and fixing of 6 Modular Cover frames..Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	282.00	15,69,330.00
783	4,028.00	Supply and fixing of 8 Modular Cover frames..Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	313.00	12,60,764.00
784	4,712.00	Supply and fixing of 12 Modular Cover frames..Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	482.00	22,71,184.00
785	59,655.00	Supply and finxing of 6A / 10A 1 Way 1 Module Modular Switch ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	121.00	72,18,255.00
786	7,583.00	Supply and fixing of 6A / 10A 2 Way 1 Module Modular Switch ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	177.00	13,42,191.00
787	30,210.00	Supply and fixing of 6A / 10A 3 Pin 2 Module Universal / Modular Socket with shutter (universal socket or normal standard socket) ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	158.00	47,73,180.00
788	8,115.00	Supply of 20A 1 Way 1 Module Modular Switch with Indicator.ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz KnudsenKnudsen.	254.00	20,61,210.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
789	7,668.00	Supply and fixing of 16A/6A 1 way Combi Socket Universal/ Modular Socket with shutter. ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	318.00	24,38,424.00
790	7,598.00	Supply and fixing of 1 Modular regulator.ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	589.00	44,75,222.00
791	3,098.00	Supply and fixing of Modular socket type Telephone jack with Connector. ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	183.00	5,66,934.00
792	3,075.00	Supply and fixing of Modular co-Axial socket type TV Antenna outlet. ISI Marked. .Makes: Legrand (Arteor) /Schneider (Zen celo)/ equivalent range/model in Crabtree/Lauritz Knudsen	183.00	5,62,725.00
793	1,838.00	Supply installation testing and commissioning of 1no of Cat6 Tool less built-in crimping mechanism Information Outlet with Dust Cover Exceed ANSI/ TIA-568-C.2 and ISO/IEC 11801 standards with 1module face plate for Category 6 component performance & Compatible to T568A, T568B wiring pattern and UL-940V0 Rated Plastic &RoHS Compliant. Legrand (Arteor) /Schneider / Crabtree /Lauritz Knudsen.	591.00	10,86,258.00
794	1,095.00	Supply & fixing of 63A 4 Pole MCB, 10 kA C/D Curve ISI Mark as per IS:60898-1 including internal connection and labour charges etc., complete. Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus)	2,506.00	27,44,070.00
795	12,975.00	Supply & fixing of 6-32A SP MCB, 10 kA C/D Curve ISI Mark as per IS:60898-1 including internal connection and labour charges etc., complete. Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus)	259.00	33,60,525.00
796	1,104.00	Supply & fixing of 63A, 2 Pole,30mA, RCCB for earth leakage protection (ELCB/RCD) confirms to IEC:61008 AND IS:12640-1 including internal connection and labour charges etc., complete. Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus).	4,506.00	49,74,624.00
797	44.00	Supply, Transportation, Erection, Testing & Commissioning of 32A Double Pole Isolator confirm to IEC 60947 in sheet steel enclosure including internal connection and labour charges for surface / flush mounting etc., complete as per detailed technical specifications and approved make. Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus)	1,018.00	44,792.00
798	39.00	Supply, Transportation, Erection, Testing & Commissioning of 40A 4 Pole Isolator confirm to IEC 60947 in sheet steel enclosure including internal connection and labour charges for surface / flush mounting etc., complete as per detailed technical specifications and approved make. Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus)	1,666.00	64,974.00
799	24.00	Supply, Transportation, Erection, Testing & Commissioning of 63A 4 Pole Isolator confirm to IEC 60947 in sheet steel enclosure including internal connection and labour charges for surface / flush mounting etc., complete as per detailed technical specifications and approved make. Makes:Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus)	1,803.00	43,272.00
800	30.00	Supply, Transportation, Erection, Testing & Commissioning of 100A 4 Pole Isolator confirm to IEC 60947 in sheet steel enclosure including internal connection and labour charges for surface / flush mounting etc., complete as per detailed technical specifications and approved make. Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus)	1,871.00	56,130.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
801	96.00	Supplying and fixing 32 amps, 415 volts, 3P metali/industrial type, socket outlet, with plug top along with 32 amps "C" curve, FPMCB, in sheet steel enclosure, on surface or in recess, with chained metal cover for the socket out let and complete with connections, testing and commissioning etc. as required as per detailed technical specifications and approved make.As directed by Eingineer In Charge. Make: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx / Lauritz Knudsen (Formerly L&T)-AU/Indo Asian-Opti pro/ HPL (Techno) /Anchor (Uno Plus), Enclosure make:Legrand(Ekinox 3) / Schneider-A9/Hager -Novello+/ Seimens/Crabtree Xpro classique-II/ Lauritz Knudsen (Formerly L&T)-Newrange/Indo Asian-Opti Pro/ HPL (Techno)/ Anchor (Uno Plus)	4,874.00	4,67,904.00
802	4,488.00	Supply and Fixing of 25mm dia 16 SWG (ISI Mark) MS Surface conduit pipe duly threading at Joints with all required accessories fixing on Separators with chromium plated base saddles and No.18 SWG MS box for light, fan and separate plug points including cost of Cement, all materials, accessories and all labour charges etc., complete as per detailed technical specifications and approved make. Makes: NAI / Bharath / GB / AKG/Precision.	318.00	14,27,184.00
803	40.00	Supply,Installation, Testing & Commissioning of 12" (300mm) Light duty exhaust fan with metalic blades and wire guard etc complete including labour charges and as direted by Engineer in charge. .Makes: Crompton / Bajaj Bahar WG / Havells Ventil Air-DSP / Orient hill air/Halonix /Polycab/G.M. (Xenix)/Goldmedal (Rapido-12)	2,504.00	1,00,160.00
804	2,616.00	Supplying, installing, testing, and commissioning of 6" (150mm), Light duty exhaust fan PVC type with required ball bearings as needed and wire guard etc complete as per specification including transportation to site, all mounting arrangements like brackets etc., and cost of all accessories and all labour charges complete. Crompton / Bajaj Bahar / Havells Ventil Air-LX / Orient hill air/Halonix /Polycab/G.M. (Eco Air)/Goldmedal (Rapido-12)	1,632.00	42,69,312.00
805	1,110.00	Supply and fixing of 48" (1200mm) Sweep 5 star rated Ceiling Fan, with double ball bearings, air delivery more than 200 cubic meter/min, but without Regulator including all labour charges etc as directed by Engineer In Charge and as per technical speicifications and of approved make. Makes: Atomberg/ Halonix /Havells/ Crompton/Superfan/RJP/Usha	3,007.00	33,37,770.00
806	5,333.00	Supply and fixing of 48" (1200mm) Sweep 5 star rated BLDC (Brush less Direct Current) Ceiling Fan with double ball bearings, input voltage 230V AC converted to 24 V DC, power input not more than 30W, air delivery not less than 220 cubic meter/min and a minimum service value of 7.0, with remote and without Regulator.as directed by Engineer In Charge and as per technical speicifications and of approved make. Makes: Atomberg/ Halonix /Havells/ Crompton/Superfan/RJP/Usha	4,191.00	2,23,50,603.00
807	4,39,438.00	Supply and run of 3 runs of 1.5 Sqmm FRLS -H/ HFFR / ZHFR PVC insulated 1100V grade as per IS : 694 specification for Copper cable including all labour charges. Makes: Finolex / RR kabel / Havells/Finecab/ KEI/Polycab/Gloster/Goldmedal/GM/ Fortune Arrt/Anchor/Million/ APAR(Anushakthi)	120.00	5,27,32,560.00
808	3,96,053.00	Supply and run of 3 runs of 2.5 Sqmm FRLS-H / HFFR / ZHFR PVC insulated 1100V grade as per IS : 694specification for Copper cable including all labour charges. Makes: Finolex / RR kabel / Havells/Finecab/ KEI/Polycab/Gloster/Goldmedal/GM/ Fortune Arrt/Anchor/Million/ APAR(Anushakthi)	163.00	6,45,56,639.00
809	75,533.00	Supply and run of 3 runs of 4.0 Sqmm FRLS -H/ HFFR / ZHFR PVC insulated 1100V grade as per IS : 694specification for Copper cable including all labour charges. Makes: Finolex / RR kabel / Havells/Finecab/ KEI/Polycab/Gloster/Goldmedal/GM/ Fortune Arrt/Anchor/Million/ APAR(Anushakthi)	248.00	1,87,32,184.00
810	64,938.00	Supply and run of 1 runs of 6.0 Sqmm FRLS -H/ HFFR / ZHFR PVC insulated 1100V grade as per IS : 694specification for Copper cable including all labour charges. Makes: Makes: Finolex / RR kabel / Havells/Finecab/ KEI/Polycab/Gloster/Goldmedal/GM/ Fortune Arrt/Anchor/Million/ APAR(Anushakthi)	113.00	73,37,994.00
811	28,278.00	Supply and run of 4 runs of 10.0 Sqmm FRLS-H / HFFR / ZHFR PVC insulated 1100V grade as per IS : 694specification for Copper cable including all labour charges. Makes: Finolex / RR kabel / Havells/Finecab/ KEI/Polycab/Gloster/Goldmedal/GM/ Fortune Arrt/Anchor/Million/ APAR(Anushakthi)	642.00	1,81,54,476.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
812	1,238.00	Supply and run of 4 runs of 16.0 Sqmm FRLS-H / HFFR / ZHFR PVC insulated 1100V grade as per IS : 694specification for Copper cable including all labour charges. Makes: Finolex / RR kabel / Havells/Finecab/ KEI/Polycab/Gloster/Goldmedal/GM/ Fortune Arrt/Anchor/Million/ APAR(Anushakthi)	956.00	11,83,528.00
813	1,00,438.00	Supply, laying ,testing and commissioning of 4-pair Cat 6 UTP Cable, Cat6 Solid (Third party ETL Intertek tested up to 700 MHZ) to support 1Gbps with Cross (+) filler pair separator & PVC sheath 23 AWG, STP/UTP Cable , Meets or exceeds ANSI/TIA-568-C.2 and UL Listed &RoHS Compliant in the existing raceways /PVC conduits including making connections to information outlets and patch panels with ferruling at both ends for identification with necessary tools for punching stripping crimping and testing required etc., complete. Makes: Systimax /Panduit/ Siemond/ Legrand/Molex/Beldon	51.00	51,22,338.00
814	45,800.00	Supply and laying of RG 6 co-axial cable complete as per technical specification and as directed by Engineer in Charge. for TVs.Makes: Finolex / RR kabel / Havells KEI/Polycab/Gloster/Goldmedal/GM/Million	42.00	19,23,600.00
815	90.00	Supply, installing, testing and commissioning of surface mounted batten Smart Bright Essential IP65 dust and waterproof LED 34W-40W-4100lm, (>=110-120 lumens/watt) CCT 6500K, CRI>80, housing made of Polycarbonate Co-extrusion, IK08, Life Span 30K hours hours (L70B50@Ta45°C), THD<10%, PF>0.85. The luminaire shall be designed for operations under diverse environment from -10 deg C to 45 deg C, Input Voltage Range 140-270V, surge protection 2.5KV, high transmission PC diffuser. The fixture should be BIS certified. LM 79 and LM80 reports need to be submitted.Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	1,750.00	1,57,500.00
816	864.00	Supply and fixing of 1X24W LED wall mounted light fixture with stainless steel base with glass cover. The fixture should be BIS certified.Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	2,600.00	22,46,400.00
817	90.00	Supply and fixing of 26 W heavy duty LED Down lighter, suitable for Recessed/Surface mounting (Square/Circular) made of pressure diecast aluminum body with powder coating, acrylic diffuser with driver as per IS: 15885 (Part 2/ Sec 13) : , operating voltage of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV, THD<10% with high power LEDs, having System Efficacy of >= 110-120 lumens / watt, CCT: 3000K - 5700K, minimum CRI > 70, Luminaire performance complies to IS 10322 (Part 5 / Sec-3) etc., complete with earth connection and not less than two years warranty. Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	1,645.00	1,48,050.00
818	558.00	Supply and fixing of 24/26 W LED Slim Panel Round /Square suitable for Recessed / Surface mounting made of diecast aluminum body with powder coating, acrylic diffuser with driver as per IS: 15885 (Part 2/ Sec 13) : 2012, operating voltage range of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV, THD<10%, with high power LEDs, having System Efficacy of >=110 to 120 lumens /watt, CCT: 3000K - 5700K, minimum CRI>70, .etc., complete with earth connection and not less than two years warranty.and as per technical specification and as directed by Engineer in charge a) LUMINAIRE MAKE : Phillips / GE- Venture / Crompton / Wipro / Bajaj / Havells / Halonix/ Jaquar/ HPL/GM / GreenLites / Gold Medal/Eveready / FortuneArrt/ Rhino/Panasonic b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG/Everlight	1,509.00	8,42,022.00
819	3,510.00	Supply and fixing of 18 W LED Slim Panel Round /Square suitable for Recessed / Surface mounting made of diecast aluminum body with powder coating, acrylic diffuser with driver as per IS: 15885 (Part 2/ Sec 13) operating voltage range of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV, THD<10%, with high power LEDs, having System Efficacy of >=110-120 lumens /watt, CCT: 3000K - 5700K, minimum CRI>70, .etc., complete with earth connection and not less than two years warranty.and as per technical specification and as directed by Engineer in charge a) LUMINAIRE MAKE : Phillips / GE- Venture / Crompton / Wipro / Bajaj / Havells / Halonix/ Jaquar/ HPL/GM / GreenLites / Gold Medal/Eveready / FortuneArrt/ Rhino/Panasonic b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG/Everlight	1,196.00	41,97,960.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
820	93.00	Supply and fixing of Elevate Glow Shaped Luminaire Fixture to be made of extrusion Aluminum housing in white finish with high efficiency polycarbonate/PS diffuser. LED Used shall be SMD type with Minimum system Lumens & efficacy70- 80lm/W for opal diffuser and 60-70lm/W for microprismatic diffuser,Its an IP 20 Product with 25 W with 2400 lumen ,Life of fixture : 50000 burning Hrs. @ L70B50 Lumen maintenance, CCT of 4000K/5700K/6500K (SDCM<=5), CRI Ra >=80, PF >0.95, operating Voltage Range of 140-270 V AC. Minimum Internal Surge Protection 4.0KV THD is less than 10%. LM 79 and LM80 reports need to be submitted from a NABL/UL accredited lab to verify above parameters. Both the fixture and Driver should have separate BIS approval.Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	4,489.00	4,17,477.00
821	2,361.00	Supply, Erection, Testing & Commissioning of 10/11W Mirror light wall/ceiling mounting luminaire with all other accessories as requiredsuitable for Recessed / Surface mounting made of diecast alluminium body with powder coating, acrylic diffuser with Driver as per IS: 15885 (Part 2/ Sec 13) , operating voltage range of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV,THD<10%, with high power LED?s having efficacy of > 120 lumins/watt,CCT: 3000K - 5700K, minimum CRI>70, .etc., complete as per detailed technical specifications and as directed by Engineer in charge Makes : Philips/Bajaj / Crompton / Havells/ HPL	625.00	14,75,625.00
822	90.00	Supply, installing, testing and commissioning of SURFACE MOUNTED Powered by the VariLume technology, havnig modern LED integrated fixture requirements of Slim design, antique finish, and dual light mode for brighter days,BIS Safety standards registered,Colour of Bronze, material made up of metal and the lamp based being LED. Dual wattage having 15W and 6W with lumen being 800lm and 300lm and CCT being 3000K, CRI >=80, Operating Voltage being AC: 220V-240V .Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	3,510.00	3,15,900.00
823	2,592.00	Supply, installing, testing and commissioning of Wall light with soft indirect lighting in brilliant matte chrome and easy to maintain,bright without glare,tmaterial made out of metal and white in colour having a Wattage as 2 X 20 W. Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	2,900.00	75,16,800.00
824	1,240.00	Supply, installing, testing and commissioning of foot light LED 3000K 220-240V,AC, CRI > 80 Input power: 10 W having Electronic driver ON/OFF CE mark. IP rating IP67 and impact resistance IK08. Material made up of metal and plastic housing with polycarbonate UV-resistant optical cover, aluminum and white color. Operating ambient temperature range is from -20°C to +40°C . Makes:Philips/Wipro/Havells/Crompton/Bajaj/Legrand/Klite/Jaquar/Reytek	586.00	7,26,640.00
825	3,995.00	Supply, installing, testing and commissioning of LED WARDROBE LIGHT/KITCHEN with required acessories of Space Glow 2ft LED Linear Cabinet Light | 12-watt LED Under Cabinet Wardrobe and Kitchen Light, Lumens-900 lumens, Cool Day Light/Warm White as approved by Engineer-In-ChargeMakes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	890.00	35,55,550.00
826	907.00	Supply, installing, testing and commissioning of Architecural Design SUSPENSION TYPE CHANDELIER LED LIGHT FIXTURE OF BRONZE BASE & FLORAL BLOWN GLASS METAL of 5 x 15W LED. Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	12,250.00	1,11,10,750.00
827	200.00	Supply, installing, testing and commissioning of RECESS MOUNTED LED DOWN LIGHT FIXTURE having diverse frame shapes incluing round, square, rectangle and trimless options with multi light configuration of approved colour and finish, having beam angles of 15, 26 or 36, LED Colours 3000 K- 4000K, CRI>90 with llight fixtures of 3 x 12 W LED . Makes:Philips/Wipro/Havells/Crompton/Bajaj/Jaquar	8,245.00	16,49,000.00
828	56.00	Supply, Transportation and Fixing of 40W 1100mm length Linear Profile LED Luminaire recessed/surface mounted with Aluminum extrusion, powder coated cover, input voltage AC 90-270 volts with PF>0.95, with high power LEDs, having system efficacy of >=100 lumens / watt, surge protection: 2KV, THD<15%, with inbuilt driver and frosted cover CCT: 3000K - 5700K, minimum CRI>70, .etc., complete including fixing of 40W Linear light duly recessed in the ceiling/surface mounted by hanging from ceiling with necessary mounting arrangements, jointing kit, connecting wire leads etc., and all accessories, giving connections and all labour charges etc., complete with earth connection and not less than two years warranty. Makes:a) LUMINAIRE MAKE : Phillips (Pureline Slim) / GE-Venture / Crompton / Wipro / Bajaj / Havells (Dustello) b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG/LG	6,276.00	3,51,456.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
829	30.00	Supply and fixing of 24/26 W LED Slim Panel Round /Square suitable for Recessed / Surface mounting made of diecast aluminum body with powder coating, acrylic diffuser with driver as per IS: 15885 (Part 2/ Sec 13) : 2012, operating voltage range of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV, THD<10%, with high power LEDs, having System Efficacy of >=110 to 120 lumens /watt, CCT: 3000K - 5700K, minimum CRI>70, .etc., complete with earth connection and not less than two years warranty.and as per technical specification and as directed by Engineer in charge a) LUMINAIRE MAKE : Phillips / GE- Venture / Crompton / Wipro / Bajaj / Havells / Halonix/ Jaquar/ HPL/GM / GreenLites / Gold Medal/Eveready / FortuneArrt/ Rhino/Panasonic b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG/Everlight	1,509.00	45,270.00
830	26,597.00	Supply and fixing of 18 W heavy duty LED Down lighter, suitable for Recessed/Surface mounting (Square/Circular) made of pressure diecast aluminum body with powder coating, acrylic diffuser with driver as per IS: 15885 (Part 2/ Sec 13) : 2012 , operating voltage of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV, THD<10% with high power LEDs, having System Efficacy of >= 110-120 lumens / watt, CCT: 3000K - 5700K, minimum CRI > 70, Luminaire performance complies to IS 10322 (Part 5 / Sec-3) etc., complete with earth connection and not less than two years warranty.Makes :a) LUMINAIRE MAKE : Phillips / GE-Venture / Crompton / Wipro / Bajaj / Havells / Halonix/Jaquar/HPL/GM / GreenLites / Gold Medal/Eveready/ FortuneArrt/ Rhino/Panasonic b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG/Everlight	1,532.00	4,07,46,604.00

834	135.00	Supply and fixing of 20-24W, not less than 1100mm length LED batten light with extruded aluminum housing and polycarbonate cover, input voltage AC 220 - 260 Volts, with high power LEDs, having System Efficacy of >=110-120lumens/watt , PF>0.9, Surge protection: 2KV, THD<15%, with inbuilt driver and frosted cover CCT: 3000K - 5700K, minimum CRI>70, etc., complete with earth connection and not less than two years warranty. as per detailed technical specifications.and as directed by Engineer in charge. a) LUMINAIRE MAKE : Phillips / GE- Venture / Crompton / Wipro / Bajaj / Havells / Halonix/Jaquar/HPL/GM / GreenLites / Gold Medal/Eveready// Rhino/Panasonic b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG/ Everlight.	700.00	94,500.00
835	1,920.00	Supply , installation testing and commissioning of 10W LED Bulk head fitting with Pressure die cast alluminum with opal diffuser with IP 65 Protection etc., complete.,as per detailed technical specifications. and as directed by Engineer in charge Makes : Philips/Bajaj/ Crompton / Surya / Havells / Greenlites/ Insta Power/HPL /Halonix/ Panasonic. / FortuneArrt	1,251.00	24,01,920.00
836	150.00	Supply, Transportation, Erection, Testing & Commissioning of hot-dip galvanized Octogonal Pole with BSEN - 10025 grade S355 JO steel plate for shaft, IS 2062 for base plate with door opening arrangement, including the supply of suitable boards with bakelite sheet as per IS specification suitable to withstand the wind speed of 180 KMPH for 7.5 Mtrs height Pole having dimensions Bottom 130 mm,. Top 70mm with 3mm thick, base plate 220 x 220 x 12mm and 4 Nos of M20 x 700 long 'J' bolts along with template.as per detailed technical specifications. Makes:Bajaj / Valmont/Laasma /Transrail/ Skipper /Consoul /Surya /Vakrangee/Lysaght Pole	15,727.00	23,59,050.00
837	153.00	Supply, Transportation, Erection, Testing & Commissioning of 1.0 Mtr Length Single Arm Bracket made with MS galvanized 40mm /50mm dia Pipe. Makes:Bajaj / Valmont/Laasma /Transrail/ Skipper /Consoul /Surya /Vakrangee/Lysaght Pole	1,738.00	2,65,914.00
838	150.00	Foundation and erection charges with special T&P, for 7.50 Mtrs long Octagonal /Conical pole duly erecting on base plate duly providing 4 Nos foundation bolts with nuts with providing of 0.45Mtr x 0.45Mtrs x1.20 Mtr size M20 cc work vibrated concreting mixing with necessary steel (10kgs) reinforcement and curing for 7 days as directed by the field engineers during execution including excavation of Earth/BT all labour charges and cost and conveyance of materials etc.complete.	6,614.00	9,92,100.00
839	153.00	Supply, Transportation, Erection, Testing & Commissioning of 60W LED Street light Luminaire made of pressure diecast alluminium body with powder coated, having protective toughned glass, poly corbrate Supply Input voltage 120 - 270 V AC, P.F > 0.90, high power LED's having System efficacy > 95 lm/W and junction temprature < 70°C, with Ingrees protection IP65, Luminaire performance complies to IS 10322 (Part 5 /Sec-3), Driver surge protection 4KV, external Surge protection = 5KV with optics distribution , THD<10% at 110 Volts AC, driver efficiency >90%, CCT: 3000K -5700K, minimum CRI>70, etc., complete as per detailed technical specifications. and as directed by Engineer in charge. a) LUMINAIRE MAKE : Wipro(Skyline) / Philips (Green line) / GE-Venture / Crompton(Neo Series) / Bajaj (Edge) / Halonix(Lumos - Super) / Havells (Endura Series) /Capart(Premium)/Greenlites(Hi-Lux) /Polycab/Keselec/ HPL(City Vision)/ Jaquar(Premium)/Eveready/ Surya (Pollux) / FortuneArrt (Leaf) / Rhino(GPSL04) b) LED MAKE : PHILIPS LUMILEDS / CREE / NICHIA / OSRAM / SAMSUNG / LG	5,601.00	8,56,953.00
840	440.00	Supply and fixing of 1 Module Bell push on a common switch board with earth continuity including wire leads, earth connections along with all labour charges etc., complete and as directed by Engineer in charge.Makes: Legrand (Arteor/Schneider(Zencelo) or equivalent range in L&K, Havells.	229.00	1,00,760.00
841	2,200.00	Supply and fixing of 1 Module Dummy or blank plate along with all labour charges etc., complete and as directed by Engineer in charge.Makes: Legrand (Arteor/Schneider(Zencelo) or equivalent range in L&K, Havells.	24.00	52,800.00
842	4,360.00	Supply of 25mm dia FRPP corrugated Flexible conduit. Make: Precision/ VIP / GoldMedal / Million plast / Sudhakar / Polyline/Anchor/Beljin	24.00	1,04,640.00
843	2,200.00	Supply of 19/20mmdia FRPP corrugated Flexible conduit. Makes : Precision/ VIP / GoldMedal / Million plast / Sudhakar / Polyline/Anchor/Beljin	19.00	41,800.00
844	3,970.00	Supply of 3 Plate Jumbo Ceiling Rose.Makes: GMGHome/GoldMedalOlive/MillionZoom /GreatwhiteOmega/Koncept/Vimalopel/ Anchor/Vihan/CPL/ Havells Reo/Elleys	22.00	87,340.00
845	160.00	Supply and fixing of Anchor fastener with fan hook / Providing MS Fan hook with grouting and cement plastering	158.00	25,280.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
846	100.00	Supply and fixing of 2 Pole weather proof Modular box suitable to fix DP MCB, IP 67 rating including fixing and labour charges etc as directed by Engineer-In-Charge.	1,450.00	1,45,000.00
847	440.00	Supply and fixing of 4 Pole weather proof Modular box suitable to fix FP MCB, IP 67 rating including fixing and labour charges etc as directed by Engineer-In-Charge.	1,650.00	7,26,000.00
848	12,870.00	Supply, Erection, Testing & Commissioning of minimum 5W/Mtr Cove/rope light to be laid on existing gypesum ceiling board of approved CCT as directed by Engineer-In-Charge. Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	130.00	16,73,100.00
849	435.00	Supply & fixing of single pahse adopter for powering up cove/rope light as directed by Engineer-In-Charge. Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	250.00	1,08,750.00
850	168.00	Supply, Erection, Testing & Commissioning of Building Facade 40W/Equivalent Light Fixture with accessories complete as per detailed technical specifications and approved make. Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	35,000.00	58,80,000.00
851	36.00	Supply, Erection, Testing & Commissioning of Main Entrance Gate Light Fixture with accessories complete as per detailed technical specifications and approved make. Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	14,500.00	5,22,000.00
852	1,580.00	Supply, Erection, Testing & Commissioning of 40 W IP 65 weather proof LED light with wall /ceiling mounting luminaire with all other accessories as requiredsuitable for Recessed / Surface mounting made of diecast alluminium body with powder coating, acrylic diffuser with Driver as per IS: 15885 (Part 2/ Sec 13) , operating voltage range of 150 to 265 Volts AC, P.F > 0.9, Surge protection: 2KV,THD<10%, with high power LED?s having efficacy of > 120 lumins/watt,CCT: 3000K - 5700K, minimum CRI>70, .etc., complete as per detailed technical specifications and approved make. Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	3,950.00	62,41,000.00
853	128.00	Supply ,erection ,testing& commisioning and transportation of bollard of 9 Watts capacity including of Base plate, Nuts,Fondations andl all accessories conveyance,labour charges and all taxes etc..complete as per detailed technical specifications and approved make.(Colour of the pole/ bracket will be desided by the client/Engineer in Charge) Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	4,762.00	6,09,536.00
854	273.00	Supply ,erection ,testing& commisioning and transportation of pergola down lights of 28 Watts capacity including of Base plate, Nuts,Fondations andl all accessories conveyance,labour charges and all taxes etc..complete as per detailed technical specifications and approved make.(Colour of the pole/ bracket will be desided by the client/Engineer in Charge). Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	10,500.00	28,66,500.00
855	186.00	Supply ,erection ,testing& commisioning and transportation of tree up lights or spike lights of 3 Watts capacity including of Base plate, Nuts,Fondations andl all accessories conveyance,labour charges and all taxes etc..complete. as per detailed technical specifications and approved make.(Colour of the pole/ bracket will be desided by the client/Engineer in Charge) Makes:Philips/Wipro/Havells/Crompton/Bajaj/ K Lite/Jaquar/Reytek	9,500.00	17,67,000.00
856	18.00	Supply, fixing installation, testing and commissioning of ,fixed type aviation obstruction twin lights with dual on /off or Standby feture confirming to ICAO/FAA Standards,Low intensity, Type-A, 5 mm high. power LED, Red coloured With Power consumption less than 5W, LED lamps operating with 90V-220V on AC 0r 24V-60V on DC . The fixture must be provided with necessary baseplate. Enclosure must be IP 65, Pressure Die cast Aluminium body. Luminous intensity shall be >40 Cd, UV Stabilised optical lens for 360 degree illumination, inbuilt ON-OFF photocell. LPM Technology driven.Gasket shall be provided for moisture protection and all the screws must be of SS 304 to protect from rusting. The light fixture shall be Tested and approved by ERDA as per ICAO Specifications as per detailed technical specifications and approved make.Makes:Philips/Wipro/Havells/Crompton/Bajaj/Reytek	9,509.00	1,71,162.00
857	19.00	Supply installation Testing and commissioning of 6.0 KVA, 192/240 VDC with Isolation Transformer on line UPS system confirms to IS 16242(Part-I):2014 and IEC 60240-1 with IGBT technology pure sine wave output, double conversion with auto and manual static by pass switch single phase input / Single phase output and as per technical specifications and as directed by engineer in charge.Makes: Numeric/APC/Fuji Electric Consul Neowatt/Sakshham /Emerson	1,10,143.00	20,92,717.00
858	380.00	Supply and fixing of 12V 26 AH SMF battery with 3 years Warrenty, including wire leads ,connections etc complete., Makes: Quanta / Racket / Exide	3,999.00	15,19,620.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
859	19.00	Supply and providing of battery rack upto 11 to 20 batteries (26 AH) complete as required and as directed by Engineer in Charge	6,249.00	1,18,731.00
860	20.00	Supply installation Testing and commissioning of 3.0 KVA, 72/96 VDC with Isolation Transformer on line UPS system confirms to IS 16242(Part-I):2014 and IEC 60240-1 with IGBT technology pure sine wave output, double conversion with auto and manual static by pass switch single phase input / Single phase output.Makes: Numeric/APC/Fuji Electric Consul Neowatt/Sakshham /Emerson	64,052.00	12,81,040.00
861	160.00	Supply and fixing of 12V 26 AH SMF battery with 3 years Warrenty, including wire leads ,connections etc complete., Makes: Quanta / Racket / Exide	3,999.00	6,39,840.00
862	20.00	Supply and providing of battery rack upto 5 to 10 batteries (26 AH) complete as required and as directed by Engineer in Charge	3,749.00	74,980.00
863	21.00	Supply of Rubber hand gloves suitable for 33KV as directed by Engineer In Charge and as per technical speicifications and of any reputed ISI approved make. as directed by engineer in charge	294.00	6,174.00
864	27.00	Supplying and fixing of Shock treatment chart both in Regional Language & English and framed with 5mm thick glass as required of any reputed ISI approved make.and as per technical specifications and as directed by engineer in charge	662.00	17,874.00
865	33.00	Supply & fixing 33000V danger notice plate of 250 mm x 200mm, made of mild steel sheet of at least 2mm thick & vitreous enamelled white on both sides and with inscription in signal red colour on front side as required of any reputed ISI approved make.and as per technical specifications and as directed by engineer in charge	332.00	10,956.00
866	321.00	Supply & fixing 415V danger notice plate of 200 mm x 150mm, made of mild steel sheet of at least 2mm thick & vitreous enamelled white on both sides and with inscription in signal red colour on front side as required of any reputed ISI approved make.and as per technical specifications and as directed by engineer in charge	294.00	94,374.00
867	24.00	Supply and fixing G.I. 4 nos. Fire buckets 9 litre capacity filled with dry sand and fixed on wall hook made out of canopy type 13mm dia MS structure for 4 nos. bucket. conforming IS : 2546 of any reputed ISI approved make. and as per technical specifications and as directed by engineer in charge	2,998.00	71,952.00
868	21.00	Supply of First aid box containing material as prescribed by St. John Ambulance brigade OR Indian Red Cross complete as required of any reputed ISI approved make.and as per technical specifications and as directed by engineer in charge	1,582.00	33,222.00
869	56.00	Supply and fixing of Class A insulation having 2mm thickness upto 3.3KV PVC synthetic elastomer electrically insulated mat conforming to IS: 15652-2006 of any reputed ISI approved make. and as per technical specifications and as directed by engineer in charge	5,224.00	2,92,544.00
870	407.00	Supply and fixing of Class C insulation having 3mm thickness upto 33KV PVC synthetic elastomer electrically insulated mat conforming to IS: 15652-2006 of any reputed ISI approved make. and as per technical specifications and as directed by engineer in charge	5,499.00	22,38,093.00
871	5.00	Providing & fixing of Single Line Diagram on 5mm thick Aluminium sheet in A0 Size duly laminated.and as per technical specifications and as directed by engineer in charge	2,993.00	14,965.00
872	6.00	Providing & fixing of Single Line Diagram on 5mm thick Aluminium sheet in A1 Size duly laminated. and as per technical specifications and as directed by engineer in charge	2,299.00	13,794.00
873	1,500.00	Supply, fabricating , installing structural steel supports for fixing all sizes of MS pipes from ceiling / wall with MS Channels, Angles, Flats, Rods, as required at site with anchor fasteners, Clamps, threaded rods, nuts, bolts,washers etc complete with painting.	93.00	1,39,500.00
874	3.00	Supply & Fixing of Energizer with dual mode pulse &, LED INDICATORS for operations SFIS-SN5000 MAKE With IS standard Conformity. DUAL MODE of any reputed ISI approved make.and as per technical specifications and as directed by engineer in charge	35,000.00	1,05,000.00
875	3.00	Supply & Fixing of Power generator system with PVM and Battery backup of any reputed ISI approved make.and as per technical specifications and as directed by engineer in charge	11,200.00	33,600.00
876	5.00	Supply & Fixing ofPower supply regulation Digital control unit of any reputed ISI approved make. and as per technical specifications and as directed by engineer in charge	3,900.00	19,500.00
877	3.00	Supply & Fixing of External Audio system of any reputed ISI approved make. and as per technical specifications and as directed by engineer in charge	500.00	1,500.00
878	3.00	Supply & Fixing of IP65 Grade Mounting Box for all necessary field controller/components and with mounting structure to mount the SPVM system of any reputed ISI approved make.	13,500.00	40,500.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
879	3.00	Supply & Fixing of Earthing of all the zone controllers independently and isolated from the mains supply (4 SEKs per Set) as per IS standards of any reputed ISI approved make.	6,000.00	18,000.00
880	975.00	Supply and installation of Intermediate poles 3?feet Height Sheet molded ?V? with pre punched holes and compound wall interfacing arrangementas per the standards of any reputed ISI approved make.	550.00	5,36,250.00
881	75.00	Supply and installation of Step Poles: 4ft 40x40x2.5mmsq with 30NB supports and accessories to fix into the compound wall (Final At Site Actuals) of any reputed ISI approved make.	2,400.00	1,80,000.00
882	12.00	Supply and installation of End with supports Pole: 3feet to 40x40x2.5mmsq with 32NB supports and accessories to fix into the compound wall (Final At Site Actuals) of any reputed ISI approved make.	2,400.00	28,800.00
883	24.00	Supply and installation of Corner Poles with supports Pole:3feet to 40x40x2.5mmsq with 32NB supports and accessories to fix into the compound wall (Final At Site Actuals) of any reputed ISI approved make.	3,000.00	72,000.00
884	2,928.00	Supply and installation of Fence: With 12G hot dip GI wire horizontally run through the HV resistance pre fixed insulators and the ends terminated at the section ending poles with super strain HV insulators as an active fence. The wire securely tightened with the wire tightners for preventing the entanglement possibility. All such statutory and visual indicators for knowing fence health at glance of any reputed ISI approved make.	180.00	5,27,040.00
885	3.00	Supply and installation of Earthing of entire fence till achieving less than 200 Ohms resistance and isolated from the mains supply and fixing as per IS of any reputed ISI approved make.	2,500.00	7,500.00
886	30.00	Supply and installation of Gate Top fence of any reputed ISI approved make.	8,500.00	2,55,000.00
887	106.00	Supply and installation of Warning Sign Boards 12? X 6? X 2mm written in English & Hindi of any reputed ISI approved make.	150.00	15,900.00
888	36.00	Supply, Transportation, erection and Commissioning of MNRE approved and confirming to IS 12933 P-1,2,3&5 for 1000 LPD Flate plate Collector type Solar Water heating System with temperature application of 60 degrees with Stain less steel - 304L grade inner tank with PUF Insulation and Aluminum Cladding for Outer Cover, suitable EPDM rubber pipe connection from Collector to Solar Tank with electrical Heating back up etc., with 3 years Guarantee for Solar system and additional 2 years warranty. Make:TATA / BHEL/ BOSCH/ ETC/V-GUARD /RACOLD	2,15,584.46	77,61,041.00
889	2,625.00	Supply,Transportation and laying ofOuter dia 50mm and Inner dia 38mm double walled corrugated HDPE duct made as per specification BSEN - 500 86/IS 14930 Part-II and as per technical specifications and as directed by engineer in charge. Makes:DURA LINE (Dura Guard)/Precision/CPE	164.00	4,30,500.00
890	1.00	Supply of 10 HP Air cooled VRV / VRF Air Conditioning system of having high COP complete with indoor and outdoor units duly charged with refrigerant R-410A and oil (first charge) suitable for cooling with individual controller, (suitable for 415 +/- 10% for outdoor and 230 +/- 5% for indoor units) and complete with all accessories, fittings etc. The units shall be BMS Compatible. Outdoor Units shall be fully inverter system complete with 100% scroll/rotary compressor and drive arrangement, initial charge of refrigerant (R-410A),refrigerant piping, drier, sight glass, dual pressure cutout all housed and supported properly in cabinet, air cooled condenser & its controller for following capacities. The VRV system shall be cooling only system. Hermitic sealed Inverter Scroll/Twin Rotary. ODU should delvier the required capacity at the ambient conditions of the place as per ISHRAE Standards. The System should be highly energy efficient and COP shall not be less than 3.7. The outdoor units shall be suitable for operation between 5 and 53 deg C in cooling mode and as per technical specifications and as directed by engineer in charge.Makes: Mitsubishi /DAIKIN/Toshiba/O General. 10 HP at Vijayawada ambient conditions	3,07,306.00	3,07,306.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
891	224.00	Supply of 12 HP Air cooled VRV / VRF Air Conditioning system of having high COP complete with indoor and outdoor units duly charged with refrigerant R-410A and oil (first charge) suitable for cooling with individual controller, (suitable for 415 +/- 10% for outdoor and 230 +/- 5% for indoor units) and complete with all accessories, fittings etc. The units shall be BMS Compatible. Outdoor Units shall be fully inverter system complete with 100% scroll/rotary compressor and drive arrangement, initial charge of refrigerant (R-410A),refrigerant piping, drier, sight glass, dual pressure cutout all housed and supported properly in cabinet, air cooled condenser & its controller for following capacities. The VRV system shall be cooling only system. Hermitic sealed Inverter Scroll/Twin Rotary. ODU should delvier the required capacity at the ambient conditions of the place as per ISHRAE Standards. The System should be highly energy efficient and COP shall not be less than 3.7. The outdoor units shall be suitable for operation between 5 and 53 deg C in cooling modeand as per technical specifications and as directed by engineer in charge .Makes: Mitsubishi /DAIKIN/Toshiba/O General. 12 HP at Vijayawada ambient conditions	3,44,935.00	7,72,65,440.00
892	12.00	Supply of 14 HP Air cooled VRV / VRF Air Conditioning system of having high COP complete with indoor and outdoor units duly charged with refrigerant R-410A and oil (first charge) suitable for cooling with individual controller, (suitable for 415 +/- 10% for outdoor and 230 +/- 5% for indoor units) and complete with all accessories, fittings etc. The units shall be BMS Compatible. Outdoor Units shall be fully inverter system complete with 100% scroll/rotary compressor and drive arrangement, initial charge of refrigerant (R-410A),refrigerant piping, drier, sight glass, dual pressure cutout all housed and supported properly in cabinet, air cooled condenser & its controller for following capacities. The System should be highly energy efficient and COP shall not be less than 3.7. The outdoor units shall be suitable for operation between 5 and 53 deg C in cooling mode.and as per technical specifications and as directed by engineer in charge Makes: Mitsubishi /DAIKIN/Toshiba/O General. 20 HP at Vijayawada ambient conditions	5,37,785.00	10,75,570.00
896	405.00	Supply of 1.0 TR Hi-wall Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. and as per technical specifications and as directed by engineer in charge.Makes: Mitsubishi /DAIKIN/Toshiba/O General.	39,524.00	1,60,07,220.00
897	1,479.00	Supply of 1.6 TR Hi-wall Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. and as per technical specifications and as directed by engineer in charge.Makes: Mitsubishi /DAIKIN/Toshiba/O General.	43,117.00	6,37,70,043.00
898	1,202.00	Supply of 2.0 TR Hi-wall Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. .Makes: Mitsubishi /DAIKIN/Toshiba/O General.	44,554.00	5,35,53,908.00
899	7.00	8.0 TR - CEILING SUSPENDED UNITS - Supply of High static duct Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control.and as per technical specifications and as directed by engineer in charge Makes: Mitsubishi /DAIKIN/Toshiba/O General.	1,34,382.00	9,40,674.00
900	2.00	6.3 TR - CEILING SUSPENDED UNITS -Supply of High static duct Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. and as per technical specifications and as directed by engineer in charge Makes: Mitsubishi /DAIKIN/Toshiba/O General.	1,27,483.00	2,54,966.00
901	9.00	3.2 TR - CEILING SUSPENDED UNITS - Supply of High static duct Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control.and as per technical specifications and as directed by engineer in charge Makes: Mitsubishi /DAIKIN/Toshiba/O General.	67,550.00	6,07,950.00
902	8.00	4.5 TR - Supply of Round flow/4 way Cassette Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic contro and as per technical specifications and as directed by engineer in chargel. Makes: Mitsubishi /DAIKIN/Toshiba/O General..	72,293.00	5,78,344.00
903	3.00	4.0 TR - Supply of Round flow/4 way Cassette Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control and as per technical specifications and as directed by engineer in charge. Makes: Mitsubishi /DAIKIN/Toshiba/O General..	68,987.00	2,06,961.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
904	9.00	3.2 TR - Supply of Round flow/4 way Cassette Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. and as per technical specifications and as directed by engineer in charge Makes: Mitsubishi /DAIKIN/Toshiba/O General..	67,550.00	6,07,950.00
905	16.00	2.6 TR - Supply of Round flow/4 way Cassette Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control.and as per technical specifications and as directed by engineer in charge Makes: Mitsubishi /DAIKIN/Toshiba/O General..	66,113.00	10,57,808.00
906	16.00	2.0 TR - Supply of Round flow/4 way Cassette Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. Makes: Mitsubishi /DAIKIN/Toshiba/O General..	60,364.00	9,65,824.00
907	2.00	1.6 TR - Supply of Round flow/4 way Cassette Indoor Units consisting of 2/3/4 row deep DX coil, filter, blower section and drive arrangement, initial charge of refrigerant & oil, integral refrigerant piping, electronic expansion valve, electrical panel with controls and duly wired, thermostatic control. Makes: Mitsubishi /DAIKIN/Toshiba/O General..	58,926.00	1,17,852.00
908	8.00	4.5 TR - 4-WAY CASETTE UNITS - Lifting Shifting, Positioning ,Installation Testing and commissioning of the 4-way casette indoor units with including all required accessoires etc complete., and as per technical specifications and as directed by engineer in charge	3,528.00	28,224.00
909	3.00	4.0 TR - 4-WAY CASETTE UNITS - Lifting Shifting, Positioning ,Installation Testing and commissioning of the 4-way casette indoor units with including all required accessoires etc complete.,and as per technical specifications and as directed by engineer in charge	3,528.00	10,584.00
910	9.00	3.2 TR - 4-WAY CASETTE UNITS - Lifting Shifting, Positioning ,Installation Testing and commissioning of the 4-way casette indoor units with including all required accessoires etc complete., and as per technical specifications and as directed by engineer in charge	3,528.00	31,752.00
911	16.00	2.6 TR - 4-WAY CASETTE UNITS - Lifting Shifting, Positioning ,Installation Testing and commissioning of the 4-way casette indoor units with including all required accessoires etc complete., and as per technical specifications and as directed by engineer in charge	3,528.00	56,448.00
912	16.00	2.0 TR - 4-WAY CASETTE UNITS - Lifting Shifting, Positioning ,Installation Testing and commissioning of the 4-way casette indoor units with including all required accessoires etc complete.,and as per technical specifications and as directed by engineer in charge	2,117.00	33,872.00
913	2.00	1.6 TR - 4-WAY CASETTE UNITS - Lifting Shifting, Positioning ,Installation Testing and commissioning of the 4-way casette indoor units with including all required accessoires etc complete.and as per technical specifications and as directed by engineer in charge	2,117.00	4,234.00
914	3.00	Supply, installation, testing & commissioning of stand-alone, intelligent Touch controller with Display for controlling the indoor & outdoor units from a Remote place for all the circuits. Makes: Dakin/Mitsubushi/Ogrand/Toshuba	1,06,355.00	3,19,065.00
915	20.00	Supply and Installation of Ref Nets for Double ODU connections.Makes: Daikin/Mitsubhishi/Ogeneral/Toshibha.	6,899.00	1,37,980.00
916	2,605.00	Supply and Installation of Multi Connection Joint / Ref Nets for IDUs .Makes: Daikin/Mitsubhishi/Ogeneral/Toshibha.	6,036.00	1,57,23,780.00
917	435.00	10 TO 12 HP - LOW SIDE WORKS - VRF SYSTEM - Lifting, shifting, positioning, Installation and testing of ODUs including all accessories with Vibration Isolators for ODUs etc., complete.	14,111.00	61,38,285.00
918	20.00	14 TO 20HP - LOW SIDE WORKS - VRF SYSTEM - Lifting, shifting, positioning, Installation and testing of ODUs including all accessories with Vibration Isolators for ODUs etc., complete.	16,933.00	3,38,660.00
919	405.00	Lifting Shifting, Positioning ,Installation Testing and commissioning of the 1.0 TR TR Hi-Wall indoor units with including all required accessoires etc complete.,	1,693.00	6,85,665.00
920	1,479.00	Lifting Shifting, Positioning ,Installation Testing and commissioning of the 1.6 TR Hi-Wall indoor units with including all required accessoires etc complete.,	1,693.00	25,03,947.00
921	1,202.00	Lifting Shifting, Positioning ,Installation Testing and commissioning of the 2.0 TR Hi-Wall indoor units with including all required accessoires etc complete.,	1,693.00	20,34,986.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
922	9.00	Lifting Shifting, Positioning, Installation Testing and commissioning 3.2 TR to 5.5 TR High static Indoor duct units with including all required accessories etc complete.,	4,233.00	38,097.00
923	9.00	Lifting Shifting, Positioning, Installation Testing and commissioning 6.3 TR to 8.0 TR High static Indoor duct units with including all required accessories etc complete.,	6,350.00	57,150.00
924	1,040.00	24 G-GSS Duct- Supply, installation, testing & commissioning of 24 G GSS Ducting with required angle flanges & installation materials such as heavy duty supports by anchor fasteners etc as required asper IS 655 /SMACNA Standards suitable for rectangular ducting complete with neoprene rubber gaskets, elbows, splitter dampers, vanes, hangers, supports etc. as per approved drawings and specifications Makes:TATA/Jindal/JSW.	1,186.00	12,33,440.00
925	1,092.00	22 G-GSS Duct- Supply, installation, testing & commissioning of 22 G GSS Ducting with required angle flanges & installation materials such as heavy duty supports by anchor fasteners etc as required asper IS 655 /SMACNA Standards suitable for rectangular ducting complete with neoprene rubber gaskets, elbows, splitter dampers, vanes, hangers, supports etc. as per approved drawings and specifications Makes:TATA/Jindal/JSW.	1,329.00	14,51,268.00
926	45.00	20 G-GSS Duct- Supply, installation, testing & commissioning of 20 G GSS Ducting with required angle flanges & installation materials such as heavy duty supports by anchor fasteners etc as required asper IS 655 /SMACNA Standards suitable for rectangular ducting complete with neoprene rubber gaskets, elbows, splitter dampers, vanes, hangers, supports etc. as per approved drawings and specifications Makes:TATA/Jindal/JSW.	1,582.00	71,190.00
927	190.00	18 G-GSS Duct- Supply, installation, testing & commissioning of 18 G GSS Ducting with required angle flanges & installation materials such as heavy duty supports by anchor fasteners etc as required asper IS 655 /SMACNA Standards suitable for rectangular ducting complete with neoprene rubber gaskets, elbows, splitter dampers, vanes, hangers, supports etc. as per approved drawings and specifications Makes:TATA/Jindal/JSW.	1,725.00	3,27,750.00
928	186.00	Supply, Erection of Fresh air louver/Exhaust with extruded aluminum grill with SS wire mesh and GI volume control damper with 20 micron filters.Makes: System air/Crystal air/Carry air/Edgetech/Greenheck	6,181.00	11,49,666.00
929	20.00	Supply, Installation, Testing and commissioning of extruded Aluminum powder coated grills/ diffusers for return air with removable core type without collar damper. Makes: System air/Crystal air/Carry air/Edgetech/Greenheck	8,003.00	1,60,060.00
930	24.00	Supply, Installation, Testing and Commissioning of extruded aluminium powder coated collar dampers as per the specifications and approved drawings. Makes: System air/Crystal air/Carry air/Edgetech/Greenheck	10,972.00	2,63,328.00
931	180.00	Ø34.9 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	1,093.00	1,96,740.00
932	2,060.00	Ø28.6 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	998.00	20,55,880.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
933	2,597.00	Ø22.2 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	902.50	23,43,793.00
934	1,374.00	Ø19.1 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	808.50	11,10,879.00
935	8,193.00	Ø15.9 mm - REFRIGERANT PIPING -Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	713.00	58,41,609.00
936	11,100.00	Ø12.7 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	618.00	68,59,800.00
937	11,460.00	Ø9.5 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	456.00	52,25,760.00
938	9,183.00	Ø6.4 mm - REFRIGERANT PIPING - Supply, installation and testing of Refrigerant Piping consisting of Copper tubes of wall thickness 20G/22G inclusive of Suction Gas Piping & Fittings,Liquid Line Piping & Fittings, with class "O" nitrile rubber Insulation with finish as required.The piping to be mounted & supported properly with suitable size of clamp,M.S. hanger, tray etc., as required at site.The insulation shall be closed cell/cross linked elastomeric Nitrile rubber of thickness 13/19 mm. The insulation thickness upto 19.1 mm dia pipe shall be 13 mm and above 19.1 mm dia, the insulation thickness shall be 19 mm. Testing of refrigerant piping and procedure shall be done as per Manufacturer's recommendations.Makes:Totaline/Mandav/Mexico/TObo. Note: The rate is considered per pipe either Liquid or Suction only.	399.50	36,68,609.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
939	4,160.00	Supply, installation and testing of 25mm dia UPVC Drain Piping with 6mm Nitrile Rubber class "O" Insulation covered with interwoven glass cloth protection. Necessary pipe fittings(Including enlarger, bends, T Joints etc) has to be considered to connect the UPVC drain pipe to cast iron floor trap. Makes: Ashirvad/Supreme/Flowguard/Astral/Finolex.	214.00	8,90,240.00
940	90.00	Supply, installation and testing of 32mm dia UPVC Drain Piping with 6mm Nitrile Rubber class "O" Insulation covered with interwoven glass cloth protection. Necessary pipe fittings(Including enlarger, bends, T Joints etc) has to be considered to connect the UPVC drain pipe to cast iron floor trap. Makes: Ashirvad/Supreme/Flowguard/Astral/Finolex.	254.00	22,860.00
941	120.00	Supply, installation and testing of 40mm dia UPVC Drain Piping with 6mm Nitrile Rubber class "O" Insulation covered with interwoven glass cloth protection. Necessary pipe fittings(Including enlarger, bends, T Joints etc) has to be considered to connect the UPVC drain pipe to cast iron floor trap. Makes: Ashirvad/Supreme/Flowguard/Astral/Finolex.	311.00	37,320.00
942	38,900.00	Supply and Transportation of 2C x 1.5 sqmm PVC insulated and sheathed FRLS copper round cable for voltage up to 1100V as per IS 694 etc complete in existing hume pipe/trench/cable tray with necessary fixing arrangments as required (as directed by departmental official) complete including labour charges etc sutiable for communication between indoor and outdoor units connected to VRF system. Makes: Finolex / RR kabel / Havells /KEI/Polycab/ Gloster/Goldmedal/GM.	99.00	38,51,100.00
943	180.00	Supply, laying and dressing of 3 Core 16 Sq.mm 1100 volt grade XLPE insulated FRLS PVC sheathed Copper conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning complete etc. as directed by Engineer In Charge Makes: Torrent / Universal / Unicab / Havells / KEI /Polycab.	571.00	1,02,780.00
944	5,675.00	Supply, laying and dressing of 3 Core 10 Sq.mm 1100 volt grade XLPE insulated FRLS PVC sheathed Copper conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning complete etc. as directed by Engineer In Charge Makes: Torrent / Universal / Unicab / Havells / KEI /Polycab.	417.00	23,66,475.00
945	1,290.00	Supply, Transportation, Laying, testing and commisisoning of Remote Controller cable of size 4C x 1.5 sqmm PVC insulated and sheathed FRLS copper round cable for voltage up to 1100V as per IS 694 etc complete in existing hume pipe/trench/cable tray with necessary fixing arrangements as required (as directed by departmental official) complete including labour charges etc . Makes: Finolex / RR kabel / Havells /KEI/Polycab/ Gloster/Goldmedal/GM.	154.00	1,98,660.00
946	39,300.00	Supply and Fixing of 20mm dia (1.9-2.1mm) thick (ISI MARK) heavy grade with IS:9537-part 3 rigid PVC Conduit. fixed on walls/ceiling/cable trays with all required accessories such as conduit, junction boxes, bends, elbows, rawl plug, screws, saddle with base and ceiling rose etc., with all necessary fixing accessories like mounting screws .clamps etc. including all labour charges complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Makes: Precision/Universal& Marudhar/VIP / GoldMedal / Million plast / GM / Sudhakar/Polycab/Anchor/ Polyline/ rbit/AKG/Beljin/Vasavi/DEC.	118.00	46,37,400.00
947	5,528.00	Providing Pressure testing of entire system with Nitrogen and vacuuming nitrogen for all indoor and outdoor units. The pressure testing shall be done asper OEM recommendation.	1,797.00	99,33,816.00
948	4,144.00	Supply and transportation of R 410A Gas for the system.	1,487.00	61,62,128.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
949	3.00	VENTILATION FANS: - Supply, installation, testing and commissioning of tube axial flow type Supply/Exhaust Air Fan of suitable capacity 2300 CFM @ 25 mm wc static with powder coated MS/GSS casing and aluminum alloy impellers with high efficiency aero-foil sections, blades, the impeller directly driven by TEFC induction motor (IE-2/3) and ?F? class insulation suitable for 3 Phase, 50 Hz, 415±10% Volt, ac supply (and as per manufacturer specification) for a static pressure as indicated below. Fan section shall be suitable for Floor Mounted outdoor application as well as ceiling suspended indoor applications with suitable capacity of starter with Four Pole MCB etc., and other protective devices of approved brands within MS enclosure box complete as required and as per specifications. The fan shall be equipped with mounting bracket Inlet & outlet cone required at discharge. The sound pressure should not exceed 80 db(A) at a distance of 3 Mts. The Fan should be complete with all accessories including fire rated canvas connection with metallic flange, vibration isolators, gravity louvers, bird screen etc., as per specification including transportation to site, all mounting arrangements like brackets etc., and cost of all accessories and all labour charges complete. Fan total efficiency should not be less than 60%. Makes: Crystal Air/Kruger/ System Air/ Carry Air/ Edgetech/ Greenheck/ Aerotech/Trane.Note: The noise criterion mentioned has to be met at a distance of 3 m from equipment at room conditions. Fan shall be sutiable for BMS compatability.	90,725.00	2,72,175.00
950	36.00	Supply, installation, testing and commissioning of tube axial flow type Supply Air Fan of suitable capacity 12500 CFM for Lift well pressurisation , (35mm Total Static Pressure. Maximum Noise level - 85 DBA) WC static pressure with powder coated MS/GSS casing and aluminum alloy impellers with high efficiency aero-foil sections, blades, the impeller directly driven by TEFC induction motor (IE-2/3) and ?F? class insulation suitable for 3 Phase, 50 Hz, 415±10% Volt, ac supply (and as per manufacturer specification) for a static pressure as indicated below. Fan section shall be suitable for Floor Mounted outdoor application as well as ceiling suspended indoor applications with suitable capacity of starter with Four Pole MCB etc., and other protective devices of approved brands within MS enclosure box complete as required and as per specifications. The fan shall be equipped with mounting bracket Inlet & outlet cone required at discharge. The sound pressure should not exceed 80 db(A) at a distance of 3 Mts. The Fan should be complete with all accessories including fire rated canvas connection with metallic flange, vibration isolators, gravity louvers, bird screen etc., as per specification including transportation to site, all mounting arrangements like brackets etc., and cost of all accessories and all labour charges complete. The fan shall be equipped with mounting bracket Inlet & outlet cone required at discharge. The sound pressure should not exceed 80 db(A) at a distance of 3 Mts. The Fan should be complete with all accessories including fire rated canvas connection with metallic flange, vibration isolators, gravity louvers, bird screen etc., as per specification including transportation to site, all mounting arrangements like brackets etc., and cost of all accessories and all labour charges complete. Fan total efficiency should not be less than 60%. Makes: Crystal Air/Kruger/ System Air/ Carry Air/ Edgetech/ Greenheck/ Aerotech/Trane.Note: The noise criterion mentioned has to be met at a distance of 3 m from equipment at room conditions.Fan should be suitable for BMS compatability.	1,32,473.00	2,64,946.00
957	2.00	Supply, installation, testing and commissioning of tube axial flow type Supply Air Fan of suitable capacity 6600 CFM @ 25 mm wc static for Fire Pump room supply with powder coated MS/GSS casing and aluminum alloy impellers with high efficiency aero-foil sections, blades, the impeller directly driven by TEFC induction motor (IE-3) and ?F? class insulation suitable for 3 Phase, 50 Hz, 415±10% Volt, ac supply (and as per manufacturer specification) for a static pressure as indicated below. Fan section shall be suitable for Floor Mounted outdoor application as well as ceiling suspended indoor applications with suitable capacity2/ of starter with Four Pole MCB etc., and other protective devices of approved brands within MS enclosure box complete as required and as per specifications. The fan shall be equipped with mounting bracket Inlet & outlet cone required at discharge. The sound pressure should not exceed 80 db(A) at a distance of 3 Mts. The Fan should be complete with all accessories including fire rated canvas connection with metallic flange, vibration isolators, gravity louvers, bird screen etc., as per specification including transportation to site, all mounting arrangements like brackets etc., and cost of all accessories and all labour charges complete. Fan total efficiency should not be less than 60%. 960	23.00	Design, manufacturing, installation, testing & commissioning of 3.7 KW DOL Starter panel suitable for 415 V,3 phase, 4 wire system, made out of 16 SWG CRCA MS Sheet totally enclosed floor mounted dust and vermin proof enclosure, electrostatic powder coated with RAL 7032 with the following components 20 A, TP MPCB, 25 KA, Trip alarm contact, 25A TP -Power contactor, with required NO-NC, Over load relay, indication lamps for ON-OFF-TRIP, Selector swithc for Auto -manual, Single Phase Preventor, Digital ammeter with required CT's and selector switches, power & control terminals etc as required including auxiliary relay with contacts for smoke signal etc as requried for finished item of work as diected by Engineer-In-Charge. Makes: L&T/Schneider/ABB/Siemens/Legrand/Havells etc	28,090.00	6,46,070.00
961	12.00	Design, manufacturing, installation, testing & commissioning of 11 KW Star -Delta starter panel suitable for 415 V,3 phase, 4 wire system, made out of 16 SWG CRCA MS Sheet totally enclosed floor mounted dust and vermin proof enclosure, electrostatic powder coated with RAL 7032 with the following components 32 A, TP MPCB, 25 KA, Trip alarm contact, 50A TP -Power contactor, with required NO-NC, Over load relay, indication lamps for ON-OFF-TRIP, Selector swittch for Auto -manual, Single Phase Preventor, Digital ammeter with required CT's and selector switches, power & control terminalsas required including auxiliary relay with contacts for smoke signal etc as requried for finished item of work as diected by Engineer-In-Charge. Makes: L&T/Schneider/ABB/Siemens/Legrand/Havells etc	52,261.00	6,27,132.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
962	54.00	Supply of 1.5 TR, 5 star capable of delivering 18000 BTU/hr and above with operating on refrigerant R-32/ R410A, COP not less than 4.5 INVERTER Model Cool type split AC unit with high wall mounted Single Split indoor unit and outdoor condensing unit Hermetically sealed compressor suitable for operation on 230V, 50Hz, 1Phase AC supply capable of performing Heat cool dehumidifying air circulating and filtering with cooling and condensing units with 3 mts of copper piping, insulation kit and 4 mts of 4 core copper flexible chord with cordless remote control etc., dual barrier coating in order to protect coil form oxidation. Makes: Daikin/Carrier/LG/llyodd/Bluestar	57,142.00	30,85,668.00
963	54.00	Installation of 1.5 TR Split Air Conditioners.	2,500.00	1,35,000.00
964	54.00	Supply, Fabrication of 1set MS bracket suitable for fixing outdoor unit of split AC unit.	1,650.00	89,100.00
965	36.00	Supply, Installation, testing and commissioning of Motorized Volume Control dampers for the Lift Well Pressurization Dia 1000 mm	35,780.00	12,88,080.00
966	3.00	Supply, Installation, Testing & Commissioning of BMS server with following latest Intel i9 processor 14th generation or higher processor, 24 MB cache, 14 cores, 20 threads, up to 5.1 GHz Turbo, 125 W) or above clock speed, 32 GB, 4 x 8 GB, DDR5, 4000 MT/s, V2,HDD - 1TB SSD,MIN 2 SATA PROVISIONS, R/W CD / DVD drive, Flat Monitor - 32" LED, Serial Ports - 2 Nos, USB Ports - 4 Nos,VGA/HDMI Display - Each 1 nos, Network Card 10/100/1000MB, T400 8GB, 8GB, 3 mDP to DP adapterGraphics Card, Windows 10 Operating System / Higher, OFFICE 365 Genuine suite Anti virus, Optical mouse & key board,Multi function Laserjet Printer - A3 etc.as per detailed technical specifications and approved make including all charges complete etc as directed by Engineer In charge/ departmental authorities.Makes HP/IBM/DELL/Honeywell/Johnson /DElta/Trace/Scenag/Schendal	5,73,175.00	17,19,525.00
967	3.00	Supply, Installation, Testing & Commissioning of BMS Client Workstation with following Latest Intel microprocessor i7 / higher 14th Generation ,12 MB cache, 4 cores, 8 threads, up to 4.5 GHz Turbo, 65 W 2or above clock speed, 16GB expandable up to 32GB DDR 4 RAM, HDD - 1TB SSD ,R/W CD / DVD drive, Flat Monitor - 32" LED, Serial Ports - 2 Nos. USB Ports - 4 Nos with at least 2 NOs USB 3.0 Ports, Network Card 10/100/1000MB - 2 NVIDIA® T1000, 4 GB GDDR6, 4 mDP to DP adapters,Windows 10 Operating System / Higher,OFFICE 365 Genuine suite Anti virus, Optical mouse & key board etc.as per detailed technical specifications and approved. Makes HP/IBM/DELL. /Honeywell/Johnson Controls /Delta/Trane/Siemens/Schneider	4,06,055.00	12,18,165.00
968	3.00	Supply, Installation, Testing & Commissioning of Reporting Software with Customized Reports As per Department Format including Daily Email, All Meter Data, on/off Data ,all Alarms & trip Data From DDC Controllers following Latest Intel microprocessor i7 / higher , 2.7 to 3.0Ghz or above clock speed, 16GB expandable up to 32GB DDR 4 RAM, HDD - 1TB SSD ,R/W CD / DVD drive, Flat Monitor - 32" LED, Serial Ports - 2 Nos. USB Ports - 4 Nos with at least 2 NOs USB 3.0 Ports, Network Card 10/100/1000MB - 2 Nosography card 1GB,Windows 10 Operating System / Higher,OFFICE 365 Genuine suite Anti virus, Optical mouse & key board etc.as per detailed technical specifications with Customized Reports As per Department Format including Daily Email, All Meter Data, on/off Data ,all Alarms & trip Data From All Electrical Panels Meter Data License up to 80 Meters. Makes HP/IBM/DELL/Trane/Honey well/JC/Schneider	2,52,000.00	7,56,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
969	3.00	Supply, Installation, Testing & Commissioning of Building Control System Software - MAIN BMS SERVER SOFTWARE, of the following windows based graphical software for IBMS system with 1No Client for Operator workstation, 1No Client for Engineer workstation. The following software packages shall have below minimum features and compliances. a) 3D & HD vector dynamic graphics with Autocad import of plan with Zoom In & Zoom Out facility b) Native 64 Bit System , BTL,UL,EN Certified System, BACnet Profile B-AWS (Advanced workstation) as per the BTL Listing c) Multi-Monitor Support-(Min 4 Nos), Multi-language support,Object tracking on multiple cameras d) Certified OPC DA Server by OPC Foundation e) HTML5 based Web-Server software shall permit use of Standard Web-Browsers such as Microsoft Edge, Google Chrome, Mozilla Firefox, etc f) The Software shall comply to international standards and strive to deliver products that meet security standards such as ISA/IEC 62443, UL2900, ISO/IEC 27001, ISO/IEC62443 and OWASP g) Cybersecurity SL2, Seamless integration of Security certificates within customer IT infrastructure, Microsoft?s active directory-based authentication, LDAP integration, Use of network infrastructure that supports physical network or VLAN segmentation, End-to-end encryption from client to server, End-to-end encryption between servers, Certificate-based data exchange, Encrypted backups h) Audit Trail , 4-Eye Principle, Data Point Validation, Verified tempering evidence for report transmission i) The software shall integrate with BIM data seamlessly j) Ability to provide data to other systems thru OPC DA Server and / Or Rest web services interface. .Makes HP/IBM/DELL/Trane/JC/Scneider/Delta/Honeywell	20,18,600.00	60,55,800.00
970	3.00	SITC of True IP Based DDC-01 Standalone 32 Bit Intelligent for APFC Panel-1, peer to peer communication, interoperable DDC as per the specification. The compact controller shall have inbuilt 2-port Ethernet switch . The controller shall have 16 inputs/outputs inbuilt and can be expandable upto max 40 points by Input/Output Modules. The DDC shall have 300 Mhz processor with 128 MByte SDRAM (DDR3) and 512 MByte NAND Flash. DDC Controller shall be equipped with a battery-free real-time clock with backup for min 7 days using super capacitor. The controller shall be freely programmable and have System functions (alarming, scheduling, trending, access protection with individually definable user profiles and categories). It should have WLAN interface, Cloud connectivity for remote access and inbuilt port for POT for local interface. Note: Comissioning tool should not be dependent on any license / dongle and no extra cost should be charged. Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane	1,90,070.00	5,70,210.00
971	3.00	SITC of True IP Based DDC-02 Standalone 32 Bit Intelligent for Main LT Panel-2, peer to peer communication, interoperable DDC as per the specification. The compact controller shall have inbuilt 2-port Ethernet switch . The controller shall have 16 inputs/outputs inbuilt and can be expandable upto max 40 points by Input/Output Modules. The DDC shall have 300 Mhz processor with 128 MByte SDRAM (DDR3) and 512 MByte NAND Flash. DDC Controller shall be equipped with a battery-free real-time clock with backup for min 7 days using super capacitor. The controller shall be freely programmable and have System functions (alarming, scheduling, trending, access protection with individually definable user profiles and categories). It should have WLAN interface, Cloud connectivity for remote access and inbuilt port for POT for local interface. Note: Comissioning tool should not be dependent on any license / dongle and no extra cost should be charged. Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane	3,63,908.00	10,91,724.00
972	3.00	SITC of True IP Based DDC-03 Standalone 32 Bit Intelligent for Main LT Panel-3, peer to peer communication, interoperable DDC as per the specification. The compact controller shall have inbuilt 2-port Ethernet switch . The controller shall have 16 inputs/outputs inbuilt and can be expandable upto max 40 points by Input/Output Modules. The DDC shall have 300 Mhz processor with 128 MByte SDRAM (DDR3) and 512 MByte NAND Flash. DDC Controller shall be equipped with a battery-free real-time clock with backup for min 7 days using super capacitor. The controller shall be freely programmable and have System functions (alarming, scheduling, trending, access protection with individually definable user profiles and categories). It should have WLAN interface, Cloud connectivity for remote access and inbuilt port for POT for local interface. Note: Comissioning tool should not be dependent on any license / dongle and no extra cost should be charged. 975	18.00	SITC of True IP Based DDC-06 Standalone 32 Bit Intelligent for Typical tower, peer to peer communication, interoperable DDC as per the specification. The compact controller shall have inbuilt 2-port Ethernet switch . The controller shall have 16 inputs/outputs inbuilt and can be expandable upto max 40 points by Input/Output Modules. The DDC shall have 300 Mhz processor with 128 MByte SDRAM (DDR3) and 512 MByte NAND Flash. DDC Controller shall be equipped with a battery-free real-time clock with backup for min 7 days using super capacitor. The controller shall be freely programmable and have System functions (alarming, scheduling, trending, access protection with individually definable user profiles and categories). It should have WLAN interface, Cloud connectivity for remote access and inbuilt port for POT for local interface. Note: Comissioning tool should not be dependent on any license / dongle and no extra cost should be charged.Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane	4,99,675.00	89,94,150.00
976	3.00	Third Party Systems Integration- SITC of True IP Based BTL & UL Listed for third party integration with required Gateway/Router/Converter for AHU VFD's, VRV System, Thermostats, DG/UPS/LT/HT Panel and Fire Alarm Systems. The controller shall have 2port Ethernet switch and WLAN interface. It should have BTL label (BACnet communications passed the BTL test), Modbus, , RS485 and consisting of Dual microprocessor with Storage capacity of 1 GB RAM. It should support Real Time clock upto 7 Days. It should Support of the major communication protocols: BACnet,/IP, BACnet MS/TP, Modbus IP and Modbus RTU upto minimum 500 points or above as per approved IO summary list. Integrator shall be of same make only with all other mounting accessories complete as required and as directed by Engineer-In-Charge for not less than the follwoing integration points. Energy Meter - RS 485 MODBUS RTU DG - RS 485 (MODBUS RTU/Bacnet MSTP) FAS Panel- RS 485 (MODBUS RTU/Bacnet MSTP), (BACnet IP) Solar RS 485 (MODBUS RTU/Bacnet MSTP) Hydropneumatic system RS 485 (MODBUS RTU/Bacnet MSTP), VRF system RS 485 Bacnet MSTP or BACnet IP, Fire Fighting System RS 485 (MODBUS RTU/Bacnet MSTP), Lift RS 485 (MODBUS RTU/Bacnet MSTP) Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane	10,36,347.00	31,09,041.00
977	6.00	Supply, Installation, Testing & Commissioning of Duct Static Pressure Sensor with all the mounting accessories included. The maximum pr limit shall be 0-500Pa all other mounting accessories complete as required. Field Devices & internal cabling of AHU shall be BMS vendor scope including all charges complete etc as directed by Engineer In charge/ departmental authorities. Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane/Omecron/Greystone/ Dwyer/Omicron/Ace instruments	8,560.00	51,360.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
978	6.00	Supply, fixing, Testing & Commissioning of Duct Temperature Sensors including all charges complete etc as directed by Engineer In charge/ departmental authorities.Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane/Omecron/Greystone/ Dwyer/Omicron/Ace instruments	4,241.00	25,446.00
979	6.00	Supply, fixing, Testing & Commissioning of Current Relay including all charges complete etc as directed by Engineer In charge/ departmental authorities. Makes: L&T/ABB/Meco/Schneider/Siemens/Trane/Omecron/Greystone/Omecron/Dwyer/Omicron/Ace instruments	2,562.00	15,372.00
980	6.00	Supply, fixing, Testing & Commissioning of Voltage Transducer including all charges complete etc as directed by Engineer In charge/ departmental authorities.Makes: L&T/ABB/Meco/Schneider/Siemens/Trane/Omecron/Greystone/Omecron/Dwyer/Omicron/Ace instruments	8,123.00	48,738.00
981	3.00	Supply, fixing, Testing & Commissioning of Ultrasonic Water Level Sensor (Note: Level should indicate as Litre basis in BMS Screen) for Water tank as technical specification with all other mounting accessories including all charges complete etc as directed by Engineer In Charge/ departmental authorities. Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane/Omecron/Greystone/ Dwyer/Omicron/Ace instruments	24,356.00	73,068.00
982	3.00	Supply, fixing, Testing & Commissioning of Flame Proof Diesel Level Sensor for Diesel Day Tank Monitoring. Tank Height 1 Mtr including all charges complete etc as directed by Engineer In charge/ departmental authorities.Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane/Omecron/Greystone/ Dwyer/Omicron/Ace instruments	15,445.00	46,335.00
983	10,125.00	Supply, Laying, Termination of 2 Core 1.5 sq.mm ISI Certified (for Signal & Field devices, Third Party Integration etc....) ATSC, FRLS/PVC insulated, armored, Tinned Copper, twisted, shielded, PE insulated, Cable with proper ferrules, lugs, and other necessary accessories. The spec shall meet the system manufacturer specifications including all charges complete etc., as directed by Engineer in Charge/ departmental authorities. Makes: Torent / Universal / Unicab / Havells / KEI / Gloster/Finecab / Polycab /RR Kabel/ Polywires	80.00	8,10,000.00
984	6,075.00	Supply, Laying, Termination of 4 Core 1.5 sq.mm ISI Certified (for Signal & Field devices, Third Party Integration etc....) ATSC, FRLS/PVC insulated, armored, Tinned Copper, twisted, shielded, PE insulated, Cable with proper ferrules, lugs, and other necessary accessories. The spec shall meet the system manufacturer specifications including all charges complete etc., as directed by Engineer in Charge/ departmental authorities. Makes:Torent / Universal / Unicab / Havells / KEI / Gloster/Finecab / Polycab /RR Kabel/ Polywires	134.00	8,14,050.00
985	4,050.00	Supply and Transportation of 2 Core 1.5 Sqmm stranded/solid copper conductor FRLS-XLPE/PVC insulated & PVC sheathed, unarmoured and Overall Shielded instrumentation/control cables of 1.1 KV grade with copper conductor as per IS 7098 Part-I etc., complete.Makes:Torent / Universal / Unicab / Havells / KEI / Gloster/Finecab / Polycab /RR Kabel/ Polywires	74.00	2,99,700.00
986	3,240.00	Supply and Transportation of 2 Core 0.75 Sqmm stranded/solid copper conductor FRLS-XLPE/PVC insulated & PVC sheathed, unarmoured and Overall Shielded instrumentation/control cables of 1.1 KV grade with copper conductor as per IS 7098 Part-I etc., complete.Makes: Torent / Universal / Unicab / Havells / KEI / Gloster/Finecab / Polycab /RR Kabel/ Polywires	107.00	3,46,680.00
987	810.00	Supply,transporatation & installation of 100mm x 50mm x 1.6mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Makes: Profab/Inidana/legrand/Hfab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	424.00	3,43,440.00
988	405.00	Supply,transporatation & installation of 150mm x 50mm x 1.6mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Makes: Profab/Inidana/legrand/Hfab/Patny/Akshara made up with raw material like Tata/Jindal/JSW	492.00	1,99,260.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
989	6,075.00	Supply and Fixing of 20mm dia (1.9-2.1) mm thick P.V.C. pipe (ISI MARK) heavy grade with all required accessories suitable for fixing on walls or laying above exisitng false ceiling for switches for elv works/Light, Fan and separate plug point including all labour charges etc., complete. Makes : Precision/Universal& Marudhar/VIP / GoldMedal / Million plast / GM / Sudhakar /Polycab/Anchor/ Polyline/ Orbit/AKG/Beljin/Vasavi/DEC.	118.00	7,16,850.00
990	3.00	Building Control System Software -CLIENT LICENSE Supply, Installation, Testing & Commissioning of Additional Client License Software with minimum 5 Client License with all accessories. This software shall communicate with main BMS Software on real time basis and monitor and control all BMS functionality of entire BMS system including alarm and reporting. Make: - Honeywell / Siemens/ Schneider/Johnson Controls/Delta /Trane	1,84,500.00	5,53,500.00
991	18.00	Supply, Installation, Testing and Commissioning of 24 Port cat 6 Patch Panel , Rack mounted 19", Cat 6 UTP,1.5-1.6 MM CRS chasis, powder coated Modular Patch Panels (upgradable to intelligent panels with use of sensor strips) with collapsible shutters on jacks to support latest amendments of TIA / EIA Cat 6 Specifications in Existing Communication Rack along with necessary connections of Cat 6 UTP Cables, With Rear Cable management trays and clamps Makes: Systimax /Panduit/ Siemond/ Legrand.	8,915.00	1,60,470.00
992	324.00	Supply installation testing and commissioning of 2 Mtr/7 Ft 4 pair 23AWG Cat-6 UTP, flexible, double ended patch cords along with 2 nos of RJ 45 connectors with strain relief boots Compatible to T568A,T568Bspecifications including making connections to information outlets. Makes: Systimax /Panduit/ Siemond/ Legrand.	339.00	1,09,836.00
993	3,000.00	Supply installation testing and commissioning of 6 fiber Outdoor, steel tape armoured Single mode [9/125um] glass Fiber Optic Cable as per latest amendments of TIA /EIA 568B.3 , GR 20 CORE/ UEC 794-1/ EN 187000 Standards in existing MSPVC Conduits/ hume pipe including making terminations to active passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	74.00	2,22,000.00
994	6,000.00	Supply, laying ,testing and commissioning of 4-pair Cat 6 UTP Cable, Cat6 Solid (Third party ETL Intertek tested up to 700 MHZ) to support 1Gbps with Cross (+) filler pair separator & PVC sheath 23 AWG, STP/UTP Cable , Meets or exceeds ANSI/TIA-568-C.2 and UL Listed &RoHS Compliant in the existing raceways /PVC conduits including making connections to information outlets and patch panels with ferruling at both ends for identification with necessary tools for punching stripping crimping and testing required etc., complete. Makes: Systimax /Panduit/ Siemond/ Legrand.	51.00	3,06,000.00
995	18.00	Supply, Installation, Testing and Commissioning of 6U Wall mounted Communication rack in one section with glass doors, swing handles, lock, Top and Bottom Cable entries, supports for mounting rack on wall, Cable managers, Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels, sliding shelves etc.Makes: APW/HCL/Valrack/Netrack.	9,429.00	1,69,722.00
996	3.00	Supply, Installation, Testing and Commissioning of 9U Wall mounted Communication rack in one section with glass doors, swing handles, lock, Top and Bottom Cable entries, supports for mounting rack on wall, Cable managers, Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels, sliding shelves etc.Makes: APW/HCL/Valrack/Netrack.	11,156.00	33,468.00
997	18.00	Supply, Installation, Testing and Commissioning of Layer 2, 24GE port, POE 10/100/1000 4X 10 G SFP Uplink Ports, LAN base Manageable Network switch including all connectors, power supply modules and licenses etc as required and as direcetd by Engineer-In-Charge. Makes: HP/Aruba/Cisco/Xtreme	1,75,290.00	31,55,220.00
998	18.00	Supply, Installation Testing and commissioning of 12 Port LIU, 19 " Rack mounted/surface mounted aluminum / CRS powder coated multimode glass Fiber Optic Cable Patch panel/ LIU(upgradable to intelligent panels with use of sensor strips) along with cable tray/ fiber management system , adapters for ST II/ SC/FC/MT/PC/LC connections including making connections to active / passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	10,908.00	1,96,344.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
999	288.00	Supply installation testing and commissioning of 3 Mtr/10 Ft 4 pair 23AWG Cat-6 UTP, flexible, double ended patch cords along with 2 nos of RJ 45 connectors with strain relief boots Compatible to T568A,T568Bspecifications including making connections to information outlets. Makes: Systimax /Panduit/ Siemond/ Legrand.	390.00	1,12,320.00
1000	417.00	Supply installation testing and commissioning Patch Cards 2 / SC-APC + FTTH T Box 1 including making terminations to active passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemon/ Legrand	600.00	2,50,200.00
1001	8,700.00	Supply installation testing and commissioning of 6 fiber Outdoor, steel tape armoured Single mode [9/125um] glass Fiber Optic Cable as per latest amendments of TIA /EIA 568B.3 , GR 20 CORE/ UEC 794-1/ EN 187000 Standards in existing MSPVC Conduits/ hume pipe including making terminations to active passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemon/ Legrand	74.00	6,43,800.00
1002	3,150.00	Supply installation testing and commissioning of 12 fiber Outdoor, steel tape armoured Single mode [9/125um] glass Fiber Optic Cable as per latest amendments of TIA /EIA 568B.3 , GR 20 CORE/ UEC 794-1/ EN 187000 Standards in existing MSPVC Conduits/ hume pipe including making terminations to active passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemon/ Legrand	86.00	2,70,900.00
1003	219.00	Supply installation testing and commissioning of Fiber Termination Box / Joint Closures	8,220.00	18,00,180.00
1004	57.00	Supply installation testing and commissioning of GPON PLC Splitter (1:8 or based on requirement) rack mountable, Splicing, Pig Tails and all required connectors and fixing accessories in complete. required and as directed by Engineer in Charge.Makes.Commscope/STERLITE/OPTIK/ R&M/Legrand	2,100.00	1,19,700.00
1005	39.00	Supply, Installation Testing and commissioning of 24 Port LIU, 19 " Rack mounted/surface mounted aluminum / CRS powder coated multimode glass Fiber Optic Cable Patch panel/ LIU(upgradable to intelligent panels with use of sensor strips) along with cable tray/ fiber management system , adapters for ST II/ SC/FC/MT/PC/LC connections including making connections to active / passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	20,643.00	8,05,077.00
1006	21.00	Supply, Installation Testing and commissioning of 48 Port LIU, 19 " Rack mounted/surface mounted aluminum / CRS powder coated multimode glass Fiber Optic Cable Patch panel/ LIU(upgradable to intelligent panels with use of sensor strips) along with cable tray/ fiber management system , adapters for ST II/ SC/FC/MT/PC/LC connections including making connections to active / passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	42,000.00	8,82,000.00
1007	21.00	Supply, Installation, Testing and Commissioning of 12U (44mm) Wall mounted Communication rack in one section with glass doors, swing handles, lock, Top and Bottom Cable entries, supports for mounting rack on wall, Cable managers, Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels, sliding shelves etc. Makes: APW/HCL/Valrack/Netrack	11,299.00	2,37,279.00
1008	3.00	Supply, Installation, Testing and Commissioning of Floor mounted 42U communication rack in on Section with glass doors, swing handles, lock on both doors, Top and Bottom Cable entries with gland plates, Castor with brakes , 7 no Cable managers, 1 no Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels of 1u / 2 u, sliding shelves. Frame of communication rack should be made of heavy grade Aluminum profile PS grey painted and panels should be made from CRCA steel 18 SWG RS Beige painted. Makes: APW/HCL/Valrack/Netrack	69,271.00	2,07,813.00
1009	417.00	Supply, Installation, Testing and Commissioning of TATA SKY DTH Services Tower Antenna, RG 6 Cable PVC Pipes , Splitters including all accessories to enable DTH Services etc	1,800.00	7,50,600.00
1010	93.00	Supply, Installation and Testing and commissioning of indoor 1 pair Singlemode [9/125um] glass Fiber Optic Patch Cords of required length in mtrs as per latest ammendments of TIA/EIA 568B.3 and IEC 794 Standard Specifications including ST II / SC/FC/MT/PC connectors at both ends as per requirements. Makes:Systimax /Panduit/ Siemond/ Legrand	2,034.00	1,89,162.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1011	3.00	Supply, installation, Testing and commissioning of GPON OLT 16 PON Port Hardware comparatable with the ONT along with all required connectors and fixing accessories in complete. required and as directed by Engineer in Charge.Make-NOKIA/ALPHIONS/TEJAS/GX	3,00,000.00	9,00,000.00
1012	3.00	Supply, Installation, Testing and commissioning of SIP Server for 200 Extn HYBRID / IP PBX with required software and comparatable to integrate with the GePON / GPON OLT & AOLT, including all fixing connectors and fixing accessories in complete. required and as directed by Engineer in Charge. Makes-CISCO/NEC/MATRIX/GRANDSTREM	1,41,000.00	4,23,000.00
1013	417.00	Supply, installation, Testing and commissioning of GPON ONT Hardware with minimum 4 Port Ethernet port, 1 WIFI router (1GBPS)& 2 Voice output comparatable with the OLT along with all required connectors , backbox, and fixing accessories. GPON ONT shall be with Wifi Router in complete. required and as directed by Engineer in Charge.Make-NOKIA/ALPHIONS/TEJAS/GX	4,000.00	16,68,000.00
1014	21.00	Supply, Installation, testing and commissioning of 1 WAN + 4 LAN Port with 300 mbps speed and coverage 30 meters range Wi-Fi Router with all connectors , adapters and fixing accessories. Qty Shall vary as per client requirement in complete. required and as directed by Engineer in Charge.Makes-DLINK/TPLINK/TENDA	2,900.00	60,900.00
1015	417.00	Supply, Installation and testing of Analogue Telephone Handsets with Display and Connecting cables.. Etc in complete. required and as directed by Engineer in Charge.Makes-PANASONIC/BEETAL/NEC/ MATRIX	1,350.00	5,62,950.00
1016	6.00	Supply and Installation of Mikrotik CCIR Server CCR2116 1U rack mount, 1x Gigabit Ethernet, 4 nos 10G SFP+ cages, LCD, including required power supply , SFP modules, Communications modules , etcFor Controlling the Users Bandwidth and Software	2,88,750.00	17,32,500.00
1017	6.00	Supply installation Testing and commissioning of 3.0 KVA, 72/96VDC on line UPS system confirms to IS 16242(Part-I):2014 and IEC 60240-1: 2008 with IGBT technology pure sine wave output, double conversion with auto and manual static by pass switch single phase input / Single phase output. Makes: Numeric/APC/Fuji Electric/ Sakshham /Emerson.	48,625.00	2,91,750.00
1018	6.00	Supply and providing of battery rack for 5 to 10 batteries (42 AH)	3,749.00	22,494.00
1019	48.00	Supply and fixing of 12V 42 AH SMF battery with 3 years warranty including wire leads, connections etc complete. Makes: Quanta / Racket / Exide.	7,124.00	3,41,952.00
1020	87.00	Supply, Installation, Testing and Commissioning of 4-5 MP IR Motorized, Focus & Zoom (MFZ) Dome, 2.7-13.5mm DC Iris, 1/2.8" progressive CMOS image sensor, Min. Illumination 0.005 (color), S/N Ratio: 50dB, Electronics Shutter: 1/8 ~ 1/32000, IR Distance: up to 50M, WDR~120dB/BLC/HLC/3D DNR,defog, Gain Control: 0 ~100%, Alarm In& Out; SD card up to 256GB, 30fps; PAN: 0-355, Tilt: 0-75, Rotation: 0-354; Video Compression: H.265 HEVC/H.264/MJPEG, Smart Codec; Triple Stream; 2way Full duplex, Line IN & Out; Protocals:IPv4, IPv6, TCP / IP, HTTP, HTTPS, RTSP / RTP / RTCP, IGMP / Multicast, SMTP, DHCP, NTP, DNS, QoS, SNMP, 802.1X, UDP, ICMP, ARP, TLS; ONVIF: S/G/T; MAx. 10 user; User account and password protection, HTTPS, IP Filter, Digest authentica tion, TLS1.2 only, Stream encryption, AES128 / 256, SSH / Telnet closed, PCI-DSS compliance; Edge Analytics: : People Counter, Multi Loitering, Intrusion, Tampering, Smart Motion Detection (SMD), Motion Detection; Events: Video motion detection, Alarm input, Recording notification, Tampering; Op. Temp: -40 to 60 Deg; power consumption max. 7W; IP67, IK10, UL, NDAA Compliance. Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. Makes: Honeywell,Panasonic, Matrix, Bosch, PELCO, Axis	19,200.00	16,70,400.00

Contractor

Chief Engineer(H and B-H)
APCRDA , Vijayawada

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1021	93.00	Supply, Installation, Testing and Commissioning of 4-5 MP IR Motorized, Focus & Zoom (MFZ) MFZ Bullet, 2.7-13.5mm DC Iris, 1/2.8" progressive CMOS image sensor, Min. Illumination 0.005 (color), S/N Ratio: 50dB, Electronics Shutter: 1/8 ~ 1/32000, IR Distance: up to 60M, WDR~120dB/BLC/HLC/3D DNR,defog, Gain Control: 0 ~100%, Alarm In& Out; SD card up to 256GB, 30fps; Video Compression: H.265 HEVC/H.264/MJPEG, Smart Codec; Triple Stream; 2way Full duplex, Line IN & Out; Protocals:IPv4, IPv6, TCP / IP, HTTP, HTTPS, RTSP / RTP / RTCP, IGMP / Multicast, SMTP, DHCP, NTP, DNS, QoS, SNMP, 802.1X, UDP, ICMP, ARP, TLS; ONVIF: S/G/T; Max. 10 user; User account and password protection, HTTPS, IP Filter, Digest authentication, TLS1.2 only, Stream encryption, AES128 / 256, SSH / Telnet closed, PCI-DSS compliance; Edge Analytics: : People Counter, Multi Loitering, Intrusion, Tampering, Smart Motion Detection (SMD), Motion Detection; Events: Video motion detection, Alarm input, Recording notification, Tampering; Op. Temp: -40 to 60 Deg; power consumption max. 7W; IP67, IK10, UL, NDAA Compliance. Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. 1024	24.00	Supply, Installation, Testing and Commissioning of 4-5 MP IR Speed PTZ, Optical zoom 30X, optical Zoom 16X, 5.3 ~159mm, P-Iris, 1/2.8" progressive CMOS image sensor, Min. Illumination 0.007 (color), S/N Ratio: 50dB, Electronics Shutter: 1/1 ~ 1/30000sec, IR Distance: up to 150M, WDR~120dB/BLC/HLC/3D DNR, Gain Control: 0 ~100%, Alarm 2 IN& 2 OUT; SD card up to 256GB, PAN Range/Speed: 0-360/.1 ~ 180/s deg, Tilt Range/Speed: -10 ~ +90/.1 ~ 90deg/s, 400 preset locations, 12 tours, 6 patterns; Video Compression: H.265 HEVC/H.264/MJPEG, Smart Codec; Triple Stream;30fps; Video analytics: People counting, intrusion, tampering,Loitering,Motion Detection, SMD; 2 way audio stream with full duplex Protocals: IPv4, IPv6, TCP / IP, HTTP, HTTPS, UPnP, RTSP / RTP / RTCP, IGMP / Multicast, SMTP, DHCP, NTP, DNS, QoS, SNMP, 802.1X, UDP, ICMP, ARP, TLS; User account and password protection, HTTPS, IP Filter, Digest authentication, TLS1.2 only, Stream encryption, AES128 / 256, SSH / Telnet closed, PCI-DSS complianceONVIF: S/G/T; Op. Temp: -40 to 60 Deg; power consumption max. 25W; IP66, IK10, UL, NDAA, Price to be inclusive of all required mounts. Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. Makes: Honeywell,Panasonic, Matrix, Bosch, PELCO, Axis	1,34,066.00	32,17,584.00
1025	25.00	Supply, Installation, Testing and Commissioning of 32CH Embedded 4K NVR 8 SATA expandable each BAY up to 10TB, audio input & Output, Two way communication supported, G7.11 audio format support, 320 Mbps recording throughput, 16 alarm inputs & 4 Outputs, RS485, Esata,RAID and RS232 to be supported with max. 16 users, Op. temp -10 to 50 deg. C, NDAA compliant, UL, CE, FCC certified.Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. Makes: Honeywell,Panasonic, Matrix, Bosch, PELCO, Axis	1,15,649.00	28,91,225.00
1026	1.00	Supply, Installation, Testing and Commissioning of 64CH Embedded 4K NVR 8 SATA expandable each BAY up to 10TB, audio input & Output, Two way communication supported, G7.11 audio format support, 320 Mbps recording throughput, 16 alarm inputs & 4 Outputs, RS485, Esata,RAID and RS232 to be supported with max. 16 users, Op. temp -10 to 50 deg. C, NDAA compliant, UL, CE, FCC certified.Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. Makes: Honeywell,Panasonic, Matrix, Bosch, PELCO, Axis	2,44,800.00	2,44,800.00
1027	66.00	Supply and installation of Surveillance 8TB HDD Storage upto 256 Cameras of continous recording at resolution of 1080 p @ 25 Fps for 30 Days. Makes:Seagate/Hitachi/TOSHIBA/ED	23,314.00	15,38,724.00
1028	850.00	Fabrication, supply and transportation of all sizes swaged poles up to site confirming to IS 2713 / 1980 specifications. The pole should be painted with primary coat of red oxide and black bituminous paint up to ground level with base plate, including cost of all materials etc., complete. (Rate per K. G). Makes: Hissar / Tata pipes/Prakash Surya	100.00	85,000.00
1029	600.00	Fabrication and Supply of M.S. Poles for garden posts with 'B' class 60.25mm outer dia with base plate and suitable pole cap including cost and conveyance of all material including fixing of luminaire and labour charges etc., complete. (Rate per K. G). Makes: Hissar / Tata pipes/Prakash Surya	90.00	54,000.00
1030	150.00	Supply of different sizes of M. S. Pipe brackets (Rate per K.G) of approved shape as directed by Engineer-In-charge..Makes: Hissar / Tata pipes/Prakash Surya	90.00	13,500.00
1031	15.00	Supply and transportation of following glass reinforced polymer (GRP) composite type Conical pole with single arm bracket of length 1Mtr and internal junction box including labour charges etc., complete. Makes: As per list of recommended brands. - 4.00 Mtrs height, Bottom dia 143mm, Top 76mm, AV thickness 6mm and to withstand maximum wind velocity 180Km/Hr. Makes: Bajaj / Kemrock / Valmont/Sumip/Helipole.	14,443.00	2,16,645.00
1032	15.00	Supply and transportation of base bracket suitable for glass reinforced polymer (GRP) composite type pole including labour charges etc., complete - For 4.00 Mtrs Pole. Makes: Bajaj / Kemrock / Valmont/Sumip/Helipole.	2,072.00	31,080.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1033	6.00	Supply, Installation, Testing & Commissioning of Client Workstation with following Latest Intel microprocessor i7 / higher , 2.7 to 3.0Ghz or above clock speed, 8GB expandable up to 32GB DDR 4 RAM, HDD - 1TB SATA ,R/W CD / DVD drive, Flat Monitor - 32" LED, Serial Ports - 2 Nos. USB Ports - 4 Nos with at least 2 NOs USB 3.0 Ports, Network Card 10/100/1000MB - 2 Nosography card 1GB,Windows 10 Operating System / Higher, MS office suite Anti virus, Optical mouse & key board etc.as per detailed technical specifications and approved makes as directed by Engineer-In-Charge-Note:Work Station / Server to be consider as per OEM Recomendation. Makes : HP/IBM/DELL	1,18,728.00	7,12,368.00
1034	3.00	Supply, Transportation and installation of All-in-One Laser type print technology (Print, Copy, Scan) with duplex, auto document feeder features: -Print Resolution 600 x 600dpi -Print Speed (A4) 27ppm -Auto Duplex Printing Standard -Available Paper Size for Auto Duplex Print A4, Letter, Legal (*1), Indian Legal, Fulllscape -COPY Copy Speed (A4) 27ppm Maximum Number of Copies Up to 999 copies Scan Type Colour Contact Image Sensor Scan Resolution Optical Up to 600 x 600dpi Pull Scan Yes, USB and Network. Makes: HP/IB/Dell	28,182.00	84,546.00
1035	30.00	Supply, Installation, Testing and Commissioning of Layer 2, 8 GE port, POE 10/100/1000 4 X 10 G SFP Uplink Ports, LAN base Manageable Network switch including all connectors, power supply modules and licenses etc as required and as direcetd by Engineer-In-Charge.Makes: HP/Aruba/Cisco/Xtreme	28,631.00	8,58,930.00
1036	6.00	Supply, Installation, Testing and Commissioning of 24 ports of Layer 3-1/10GbE (SFP+) ports with four 40GbE (QSFP+) or 25/50 GbE (SFP56) Uplink interface ports or higher.Switching Capacity 800 Gpbs or higher, Forwarding packet rate of min 600 Mpps or higher,Stacking up to 8 units, Multicore CPU, 8GB DRAM or higher, 16GB Flash or higher, Packet buffer minimum 8MB. Support for minimum 60,000 routing table, BGP, MP-BGP, VRF, OSPF, OSPFv3, Policy-Based Routing (PBR), PIM SM, VXLAN, ERPS from day 1. Integrated TPM chip or equivalent, Sflow, UDLD or equivalent and modular operating system. Certifications: IPv6 logo phase 2, EAL/NDPP etc as required including all connectors, power supply modules and licenses etc and as direcetd by Engineer-In- Charge.Makes:HP/Aruba/Cisco/Xtreme etc as required and as per detailed technical specifications as directed by Engineer-In-Charge.Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. Makes: HP/Aruba/Cisco/Xtreme	6,94,074.00	41,64,444.00
1037	30.00	Supply, Installation, Testing and Commissioning of Layer-2, 24 port of 100/1000 Base-Tx PoE (minimum 370W or more as required) ports with 4 x 1GE/10G SPF+ Uplink interface ports or higher.Switching Capacity 128 Gpbs or higher, Forwarding packet rate of min 95 Mpps or higher,Multicore CPU, 4GB DRAM or higher, 16GB Flash or higher, Packet buffer minimum 12MB. Support for Staic routing & 512 unicast routs for IPV4/V6. Integrated TPM chip or equivalent, Sflow, UDLD or equivalent and modular operating etc as required including all connectors, power supply modules and licenses etc and as direcetd by Engineer-In- Charge.Makes:HP/Aruba/Cisco/Xtreme etc as required and as per detailed technical specifications as directed by Engineer-In-Charge.Manufacturer Authorization Form (MAF) to be provided from OEM by the contractor for taking arppoval. Makes: HP/Aruba/Cisco/Xtreme	1,75,290.00	52,58,700.00
1038	60.00	Supply, Installation, Testing and Commissioning of 10 G SFP+ Long Range (Single) Module up to 10KM. Makes: HP/Aruba/Cisco/Xtreme	36,000.00	21,60,000.00
1039	35,213.00	Supply, laying ,testing and commissioning of 4-pair, Cat6 Solid 6 UTP cable (Third party ETL Intertek tested up to 700 MHZ) to support 1Gbps with Cross (+) filler pair separator & PVC sheath 23 AWG, STP/UTP Cable , Meets or exceeds ANSI/TIA-568-C.2 and UL Listed &RoHS Compliant in the existing raceways /PVC conduits including making connections to information outlets and patch panels with ferruling at both ends for identification with necessary tools for punching stripping crimping and testing required etc., complete. Makes: Systimax /Panduit/ Siemond/ Legrand	51.00	17,95,863.00
1040	2,676.00	Supply,laying, testing and commissioning of 3 core 1.5 Sqmm PVC insulated and sheathed FRLS copper round cable for voltage up to 1100V as per IS 694 suitable to run in exisitng pvc/ms conduits/cable trays etc including all labour charges complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. Makes: Finolex / RR kabel / Havells/ Finecab /KEI/Polycab/ Gloster/ Goldmedal/GM// Fortune Arrt/Anchor /Million	123.00	3,29,148.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1041	33.00	Supply, Installation, Testing and Commissioning of 24 ports Rack mounted 19", Cat 6 UTP,1.5-1.6 MM CRS chasis, powder coated Modular Patch Panels (upgradable to intelligent panels with use of sensor strips) with collapsible shutters on jacks to support latest amendments of TIA / EIA Cat 6 Specifications in Existing Communication Rack along with necessary connections of Cat 6 UTP Cables, With Rear Cable management trays and clamps. Makes: Systimax /Panduit/ Siemond/ Legrand	8,915.00	2,94,195.00
1042	1,626.00	Supply installation testing and commissioning of 6 fiber Outdoor, steel tape armoured Single mode [9/125um] glass Fiber Optic Cable as per latest amendments of TIA /EIA 568B.3 , GR 20 CORE/ UEC 794-1/ EN 187000 Standards in existing MSPVC Conduits/ hume pipe including making terminations to active passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	74.00	1,20,324.00
1043	42.00	Supply, Installation and Testing and commissioning of indoor 1 pair Singlemode [9/125um] glass Fiber Optic Patch Cords of One mtr length as per latest ammendments of TIA/EIA 568B.3 and IEC 794 Standard Specifications including ST II / SC/FC/MT/PC connectors at both ends as per requirements.Makes: Systimax /Panduit/ Siemond/ Legrand.	2,034.00	85,428.00
1044	3.00	Supply, Installation Testing and commissioning of 8 Port LIU, 19 " Rack mounted/surface mounted aluminum / CRS powder coated multimode glass Fiber Optic Cable Patch panel/ LIU(upgradable to intelligent panels with use of sensor strips) along with cable tray/ fiber management system , adapters for ST II/ SC/FC/MT/PC/LC connections including making connections to active / passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	8,333.00	24,999.00
1045	27.00	Supply, Installation Testing and commissioning of 12 Port LIU, 19 " Rack mounted/surface mounted aluminum / CRS powder coated multimode glass Fiber Optic Cable Patch panel/ LIU(upgradable to intelligent panels with use of sensor strips) along with cable tray/ fiber management system , adapters for ST II/ SC/FC/MT/PC/LC connections including making connections to active / passive equipment with ferruling at both ends for identification with necessary tools for Terminations and testing required. Makes: Systimax /Panduit/ Siemond/ Legrand.	10,908.00	2,94,516.00
1046	9,810.00	Supply and Fixing of 25mm dia (2-2.20) mm thick PVC pipe (ISI MARK) heavy grade concealed in wall with all required accessories such as junction boxes, conduit , bends, elbows and ceiling rose, including chiseling etc. including all labour charges complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. . Makes: Precision/Universal& Marudhar/VIP / GoldMedal / Million plast / GM / Sudhakar/Polycab/Anchor/ Polyline/ rbit/AKG/Beljin/Vasavi/DEC.	149.00	14,61,690.00
1047	3,075.00	Supply and Fixing of 20mm dia (1.9-2.1) mm thick P.V.C. pipe (ISI MARK) heavy grade concealed in wall with all required accessories such as junction boxes, conduit , bends, elbows and ceiling rose, including chiseling etc. including all labour charges complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make. . Makes: Precision/Universal& Marudhar/VIP / GoldMedal / Million plast / GM / Sudhakar/Polycab/Anchor/ Polyline/ rbit/AKG/Beljin/V	137.00	4,21,275.00
1048	765.00	Supply,Transportation and laying ofOuter dia 50mm and Inner dia 38mm double walled corrugated HDPE duct made as per specification BSEN - 500 86/IS 14930 Part-II. Makes:DURA LINE (Dura Guard)/Precision/CPE or any ISI approved make having ISI mark.	164.00	1,25,460.00
1049	3.00	"Supply, Installation, Testing and Commissioning of 9U Wall mounted Communication rack in one section with glass doors, swing handles, lock, Top and Bottom Cable entries, supports for mounting rack on wall, Cable managers, Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels, sliding shelves etc.Makes: APW/HCL/Valrack/Netrack	11,156.00	33,468.00
1050	24.00	"Supply, Installation, Testing and Commissioning of 15U Wall mounted Communication rack in one section with glass doors, swing handles, lock, Top and Bottom Cable entries, supports for mounting rack on wall, Cable managers, Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels, sliding shelves etc.Makes: APW/HCL/Valrack/Netrack	12,484.00	2,99,616.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1051	3.00	Supply, Installation, Testing and Commissioning of 42 U (44 mm) Floor Standing Rack 800WX1000D Floor mounted communication rack in on Section with glass doors, swing handles, lock on both doors, Top and Bottom Cable entries with gland plates, Castor with brakes , 7 no Cable managers, 1 no Fan tray with 2 x 230 Volt fans, Equipment mounting hardware, wire managers, power supply box for supplying power to hubs, fans etc., along with earth continuity kit, MCB, indicator, moulded power supply cable, Blank panels of 1u / 2 u, sliding shelves. Frame of communication rack should be made of heavy grade Aluminum profile PS grey painted and panels should be made from CRCA steel 18 SWG RS Beige painted. Makes: APW/HCL/Valrack/Netrack.	69,271.00	2,07,813.00
1052	813.00	Supply installation testing and commissioning of 1 Mtr/3 Ft 4 pair 23AWG Cat-6 UTP, flexible, double ended patch cords along with 2 nos of RJ 45 connectors with strain relief boots Compatible to T568A,T568Bspecifications including making connections to information outlets. Makes: Systimax /Panduit/ Siemond/ Legrand.	287.00	2,33,331.00
1053	3.00	Supply and installation of 4K UHD, 55? LED Display complete with following Specifications: a) Diagonal Size 55" b) Type Edge LED BLU. c) Resolution 3840*2160 (4K UHD) Pixel Pitch(mm)0.105 x 0.315. e) Active Display Area(mm)1209.6(H) x 680.4(V) f) Brightness (Typ.) 350 nit. g) Contrast Ratio 4000:1. h) AC Power supply-170-240V AC as per technical specifications and as directed by engineer in charge and as diretced by Engineer-In-Charge Makes: Samsung/LG/Sony/Panasonic	1,08,196.00	3,24,588.00
1054	18.00	Supply installation testing and commissioning of Screen Size (Inch),55";Panel, Technology,IPS ;Back Light Type,Direct;Aspect Ratio,16:9 Native Resolution:1,920 x 1,080 (FHD)/ 3840 x 2160 (4K); Refresh Rate,60Hz; Brightness,400-700nit (Typ.)Contrast Ratio:1,000/4000:1;Dynamic CR,500,000:1;Color Gamut, NTSC 72-92% Viewing Angle (H x V),178 X 178;Color Depth (Number of Colors),10bit(D), 1.07Billion colors Response Time,6-8ms (G to G);Surface Treatment (Haze),25-28%;Life time,60,000Hrs (Typ.)Operation Hours (Hours/Day),24/7 Portait / Landscape,Yes/Yes Input,HDMI 2 (HDCP 2.2), DP (HDCP 2.2), DVI-D (HDCP 1.4), Audio In, RS-232C In, RJ45 (LAN), IR In, USB 2.0 Type A Output,DP Out (Input : HDMI / DVI / DP), Audio Out, RS-232C Out, RJ45 (LAN), WIFI, Bluetooth compatibility, Bezel Width,B2B : 1.74mm (Panel Bezel to Panel Bezel), HW:Internal Memory 8 GB, Sensor (Temperature Sensor, BLU Sensor, Acceleration(Gyro) Sensor),SW, webOS 4.1, Embedded CMS (Local Contents Scheduling, Group Manager), USB Plug & Play, Fail Over, Background Image (No Signal Image), Sync Mode (RS-232C Sync, Local Network Sync), Video Tag (4), Play via URL, Rotation (Screen Rotation, External Input Rotation), Gapless Playback, Tile Mode Setting (Max. 15 × 15), Setting Data Cloning, SNMP, ISM Method, Auto Set ID, Status Mailing, Control Manager, 3rd Party Compatibility (Crestron Connected®2)), Power (Smart Energy Saving, PM Mode, Wake on LAN, Network Ready), HDMI-CEC3), SI Server Setting, webRTC, Pro:Idiom, W/B Setting by Grey Scale, Scan Inversion Operation Temperature,0 °C to 40 °C;Operation Humidity,10 % to 85 %;Power Supply,AC 100-240V~, 50/60Hz;Power Type,Built-In Power:Typ.,140-160W/Max.,190W BTU (British Thermal Unit),546 BTU/Hr(Typ.), 648 BTU/Hr(Max) Smart Enegy Saving (70%),90W;DPM,0.5W Power off,0.5W Safety,CB / NRTL EMC,FCC Class "B" / CE / KC; ERP / Energy Star,Yes / Energy Star 8.0 IP Rating,IP5X tested ;Conformal Coating (Power Board),Yes: Makes : LG, Samsung,Panasonic, Sony	1,23,750.00	22,27,500.00
1055	18.00	Supply installation testing and commissioning of Push Pull Brackets for fixing up of Video Wall diplay units with all requried accessories and supporting items as direccted by Engineer-In-Charge.	16,200.00	2,91,600.00
1056	3.00	Supplay Installation Testing and commissioning of HDMI Cable and Required Accessories for Video Wall display units for connection between controller / dipaly units of required length as required and as directed by Engineer-In-Charge for finished item of work.	63,000.00	1,89,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1057	3.00	Supply, Installation, Testing and commissioning of central Monitoring Software/VMS installed on the workstation (as mentioned in the specification) should have capability to connect to NVR anytime anywhere (local, remote, global P2P), Multi-NVR management, should support minimum 2000 video channel connections, should support two way audio through NVR with cameras wherever required, Should supports up to 64 live view windows in 1 single screen, should support receiving video analytic events from cameras NVR, should also support Dual monitors to display live view, tour, E-map or event views if required, should also have other features like event management and event trigger, PTZ Control, Fisheye Dewarping, E-Maps (Map Type : Picture). The software should have HTTPS and TLS 1.2 encryption streaming and communication between Cameras and NVRs,. Makes: Honeywell,Panasonic, Matrix, Bosch, PELCO, Axis	2,25,000.00	6,75,000.00
1058	6.00	Supply, Installation, Testing & Commissioning of Automatic Motorised Boom Barrier: Electromechanical Boom Barrier of 5-6 Mtr Boom Length, 3.5s to 4s Opening Closing / Time , IP54/IP 55 Protection etc, with required DC motors, loop sensors/cables/push buttons, 2 nos remote/1200 times per day, LED based suitable housing made with steel, support stand, control PCB etc all complete as required as per specification & inline with MHA Guidelines including all charges complete with Civil & Electrical works as requried and as directed by Engineer Incharge/ departmental authorities. Makes: Godrej/Neptune/Speedgatz/Magtech /Smartpower/Faac or its equivalent make as approved by the competent authority.	2,25,000.00	13,50,000.00
1059	2,660.00	Providing, laying, testing & Commissioning of 150 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete.as per technical specifications and as directed by engineer in charge Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	3,887.00	1,03,39,420.00
1060	2,431.00	Providing, laying, testing & Commissioning of 100 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge. Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	2,418.00	58,78,158.00
1061	1,009.00	Providing, laying, testing & Commissioning of 80 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge.Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	1,605.00	16,19,445.00
1062	198.00	Providing, laying, testing & Commissioning of 65 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge. Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	1,210.00	2,39,580.00
1063	165.00	Providing, laying, testing & Commissioning of 50 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge. Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	968.00	1,59,720.00
1064	333.00	Providing, laying, testing & Commissioning of 40 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge.Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	820.00	2,73,060.00
1065	36.00	Providing, laying, testing & Commissioning of 32 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge.Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	648.00	23,328.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1066	892.00	Providing, laying, testing & Commissioning of 25 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge. Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	484.00	4,31,728.00
1067	300.00	Providing, laying, testing & Commissioning of 150 mm dia 'C' Class GI pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge.Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	3,416.00	10,24,800.00
1068	450.00	Providing, laying, testing & Commissioning of 100 mm dia 'C' Class GI pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge .Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	2,258.00	10,16,100.00
1069	150.00	Providing, laying, testing & Commissioning of 80 mm dia 'C' Class GI pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete as per technical specifications and as directed by engineer in charge.Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	1,690.00	2,53,500.00
1070	40.00	Supplying, fixing, testing and commissioning of 150mm dia butterfly valve PN 1.6, with Bronze / Gun metal seat duly ISI marked complete with Nuts, Bolts, Washers, gaskets, conforming to IS 13095 of following sizes as required as per technical specifications and as directed by engineer in charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/ Zolotto / SANT/NEU-G/Honeywell//Kartar.	6,064.00	2,42,560.00
1071	3.00	Supplying, fixing, testing and commissioning of 100mm dia butterfly valve PN 1.6, with Bronze / Gun metal seat duly ISI marked complete with Nuts, Bolts, Washers, gaskets, conforming to IS 13095 of following sizes as required as per technical specifications and as directed by engineer in charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/ Zolotto / SANT/NEU-G/Honeywell//Kartar.	4,659.00	13,977.00
1072	24.00	Supplying, fixing, testing and commissioning of 80mm dia butterfly valve PN 1.6, with Bronze / Gun metal seat duly ISI marked complete with Nuts, Bolts, Washers, gaskets, conforming to IS 13095 of following sizes as required. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/ Zolotto / SANT/NEU-G/Honeywell//Kartar.	4,289.00	1,02,936.00
1073	24.00	Providing, installation, testing and commissioning of 150mm dia dual Plate non return valve of following sizes confirming to IS: 5312 complete with rubber gasket, GI bolts, nuts, washers etc as required as per technical specifications and as directed by engineer in charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/ Zolotto / SANT/NEU-G/Honeywell//Kartar.	9,762.00	2,34,288.00
1074	375.00	Supplying and fixing single headed Internal / External hydrant valve with instantaneous Gun metal couplings of 63mm dia with Cast iron wheel ISI marked conforming to IS 5290 (Type -A) with blank Gun Metal cap and chain as required as per technical specifications and as directed by engineer in charge. Single Headed Gun Metal only. Makes: Newage/ Winco/ Padmini / Safex/Minimax/ Newtech/Honeywell/Kartar.	10,797.00	40,48,875.00
1075	750.00	Supplying and fixing 63mm dia, 15 mtr long RRL hose pipe with 63mm dia Male and Female Gun metal / SS couplings duly binded with GI wire, rivets etc conforming to IS 636 (Type -A) as required as per technical specifications and as directed by engineer in charge. Gun Metal only. Makes: Newage/ Winco/ Padmini / Safex / Minimax/NewTech/Honeywell/Kartar.	8,328.00	62,46,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1076	276.00	Supplying and fixing First -Aid Hose Reel with MS construction spray painted in Post office Red, Conforming to Is 884 with upto date amendments, complete with the following as required. a) 36.6 Mtr Long 20mm (Nominal internal) dia water hose Thermoplastic / Textile reinforced / Rubber braided / Polypropylene Type - 2 as per IS:12585 b) 20mm (Nominal internal) dia gun metal globe valve and nozzle. c) Drum and brackets for fixing the equipments on wall. d) Connections from riser with 25mm dia stop valve (gun metal) & MS pipe. Makes: a) 36.6 Mtr Long 20mm (Nominal internal) dia water hose Thermoplastic / Textile reinforced / Rubber braided / Polypropylene Type - 2 as per IS:12585 Makes: Reliance/ Newage/ Safex / NewTech/ Winco/ Minimax/ Kartar. b) 20mm (Nominal internal) dia gun metal ball/gate valve and nozzle as per technical specifications and as directed by engineer in charge. Makes:Newage/SANT / Safex/Kartar.	9,910.00	27,35,160.00
1077	375.00	Supply and fixing 63mm dia Gun metal branch pipe with 20mm (Nominal internal diameter) size Gun metal / SS nozzle conforming to IS 903, suitable for instantaneous connection to interconnect hose pipe coupling as required. Gun metal only. Makes: Newage/ Winco/ Padmini / Safex / Minimax/NewTech/Kartar.	3,254.00	12,20,250.00
1078	331.00	Supply and fixing of Co2 type Fire Extinguishers 4.5 Kg capacity confirming to IS 2878 made from ISI marked steam less cylinder confirming to IS:7285 & CE certified and fitted with ISI marked controlled valve confirming to IS:3224, high pressure 1 Mtr discharge hose & horn complete with initial gas charged with carrying handle with wheels and wall mounting bracket. Squeeze lever discharge, used un-used indicator, Aphoxy coated paint (Red) with 93% gloss with 2 years warranty Including transportation, all taxes and all labour charges etc complete as per technical specifications and as directed by engineer in charge. Makes: Ceasefire/Minmax Safex / Kenex / Bharat / Reliance/NewTech/Kartar.	12,256.00	40,56,736.00
1079	387.00	Supply and fixing of ABC stored pressure squeeze grip type fire extinguishers, 9 kg capacity, IS:15683 : 2006, filled with ABC Mono Ammonium Phosphate base powder-90 complete with discharge hose and wall mounting bracket, 2mm Mild Steel, EPDM Rubbers, Pressure Gauge, which work effectively on all class of fires (A, B, C & Electrical fires) with 5 years warranty Including transportation, all taxes and all labour charges etc complete as per technical specifications and as directed by engineer in charge. Makes: Ceasefire/Minmax/Safex / Kenex / Bharat / Reliance/NewTech/Kartar.	8,153.00	31,55,211.00
1080	23.00	Supply, installation, testing and commissioning of 25/20 mm dia Air Release Valve as per technical specifications and as directed by engineer in charge. Makes: Zoloto / Leader / SANT/Kartar.	1,627.00	37,421.00
1081	46.00	Supply, installation, testing and commissioning of Dia. 25 mm Gun metal Ball valve for air release valve & pressure gague as per technical specifications and as directed by engineer in charge. Makes: Zoloto / Leader / SANT/Newage/Kartar.	858.00	39,468.00
1082	351.00	Supplying and fixing orifice plate made out of 6 mm thick stainless steel (Grade 304) with orifice of required size to be fitted between flange& landing valve of external and internal hydrants to reduce pressure at the outlet to the level of 3.5 kg/cm2 complete as required.Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/ Zolotto /SANT/NEUG/Honeywell/ Kartar.	1,234.00	4,33,134.00
1083	27.00	Supply and fixing 4 way fire brigade connection of cast iron body with 4 Nos Gun metal Male instantaneous inlet couplings complete with cap and chain as required for 150mm dia MS pipe connection, conforming to IS 904 as required. Makes: Newage/ Winco/ Padmini / Safex / Minimax/NewTech/Honeywell/Kartar.	11,832.00	3,19,464.00
1084	157.00	Supply and fixing of Escape signage boards in Rigid Photo luminescent based glow in Dark rigid sheet with high intensity luminous properties with specification. Makes: Cease Fire or its equivalent make Model-1ES01	1,725.00	2,70,825.00
1085	276.00	Supplying and installing of Fire hydrant & Hosereel - with symbol. Size 8" x 8" in position the following type of sign boards made out of 3mm thick "Opaque" PVC foam board with computer cut, PVC Non-reflective self adhesive vinyle painted foam board, complete with mirror fasteners.The intensity of glow in dark should last not less than 2 hours and the strongest glow shall be produced in the first 30 minutes as per technical specifications and as directed by engineer in charge	447.00	1,23,372.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1086	489.00	Supplying and installing of In case of fire pull down - with Manual call point symbol.Size 6" x 8" in position the following type of sign boards made out of 3mm thick "Opaque" PVC foam board with computer cut, PVC Non-reflective self adhesive vinyle painted foam board, complete with mirror fasteners.The intensity of glow in dark should last not less than 2 hours and the strongest glow shall be produced in the first 30 minutes	425.00	2,07,825.00
1087	406.00	Supplying and installing of Fire extinguisher - with symbol. Size 6" x 6" in position the following type of sign boards made out of 3mm thick "Opaque" PVC foam board with computer cut, PVC Non-reflective self adhesive vinyle painted foam board, complete with mirror fasteners.The intensity of glow in dark should last not less than 2 hours and the strongest glow shall be produced in the first 30 minutes	411.00	1,66,866.00
1088	249.00	Supplying and installing of In case of fire, Do not use Lift,Use Stair - with symbol. Size 8" x 8" in position the following type of sign boards made out of 3mm thick "Opaque" PVC foam board with computer cut, PVC Non-reflective self adhesive vinyle painted foam board, complete with mirror fasteners.The intensity of glow in dark should last not less than 2 hours and the strongest glow shall be produced in the first 30 minutes	447.00	1,11,303.00
1089	24.00	Supplying and installing of Main fire alarm panel.Size 6" x 8" in position the following type of sign boards made out of 3mm thick "Opaque" PVC foam board with computer cut, PVC Non-reflective self adhesive vinyle painted foam board, complete with mirror fasteners.The intensity of glow in dark should last not less than 2 hours and the strongest glow shall be produced in the first 30 minutes	432.00	10,368.00
1090	510.00	Supply and fixing of Egress route map 594x420 (A1 size sticker in foam board)	3,000.00	15,30,000.00
1091	228.00	Supply of round bottom G.I sheet bucket of 9 Ltrs. Capacity as per IS:2546 made out of 24-gauge GI sheet with extra handle at bottom duly painted inside and red outside with printed with FIRE Mark for stand and hook and filled with sand and arranged to existing stand or hook.	372.00	84,816.00
1092	57.00	Providing floor mounting stand for keeping 4 No of fire bucket 1500mm length, 900mm height made out of 40x40x6mm angle iron welded with 4 hooks and duly painted with one coat of red lead and two coats of enamel paint.	1,512.00	86,184.00
1093	111.00	Supply and fixing of Fire stop mortar shall be fire resistant, cement based mortar with thermal insulating properties, providing a minimum of 2 hours fire rating. It shall have good adhesion properties with base materials like concrete, masonry, metal pipes. It shall prevent passage of fire, smoke and water through fire rated wall and floor penetrations, cladding, etc. It shall be used as a permanent fire seal for Fire pipes. It shall be UL classified / FM approved.Makes: HM/Hilti/3M	9,500.00	10,54,500.00
1094	1,030.00	Providing fixing, testing and commissioning of 15mm size quartzoid bulb type sprinklers of rating 68º C pendent / side wall with required accessories. :Makes: HD / TYCO / VIKING / NEWAGE/ SHARP / SAFEX	633.00	6,51,990.00
1095	8.00	Providing and fixing Flow Switches in 150 mm dia MS pipe. Makes : System Sensor / Switzer /Honeywell	9,630.00	77,040.00
1096	2.00	Providing and fixing Flow Switches in 100 mm dia MS pipe. Makes : System Sensor / Switzer /Honeywell	6,899.00	13,798.00
1097	18.00	Providing and fixing Flow Switches in 80 mm dia MS pipe. Makes : System Sensor / Switzer /Honeywell	5,000.00	90,000.00
1098	39.00	Providing, fixing including testing and commissioning 100 mm dia pressure gauge of range 0 - 16 Kg / sqcm conforming to IS - 3624 having bourdon tube of stainless steel 310 in cast aluminium,stove enamelled, black, weather proof case with outer, screwed aluminium bezel and complete with necessary U-type stainless steel siphon tube and cock complete as required. Makes: Hguru/FEBIG	862.00	33,618.00
1099	3.00	Providing, fixing, testing & commissioning of installation control valve of cast iron body, brass/bronze working parts comprising of water motor alarm, bronze seat clapper, clapper arm and hydraulically driven mechanical gong bell to sound continuous alarm when the wet riser/sprinkler system activates, pressure gauges, emergency releases, strainer, pressure switch, cock valve complete with drain valve and bypass, test control box, ball valves, MS pipe of required size, flanges, orifice plate, gasket etc of following sizes as required : Makes: HD/Tyco/Newage	59,162.00	1,77,486.00
1100	18.00	Providing & fixing G.I. Puddle flange fabricated of 750mm long pipe pices to RCC water tank slab/wall. Entire fitting shall be hat dipped galvanised (flanges shall confirm to BS-10 table e) dia. 100mm, flanged end MS plate 6mm thick 200mmx200mm + dia of pipe.	11,446.00	2,06,028.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1101	1.00	Supply, installation, testing and commissioning of electrically driven horizontal, single outlet, centrifugal fire hydrant / sprinkler pump, suitable for automatic operation consisting of the following: a) Horizontal,end suction, centrifugal pump, suitable for operation on 415 volts ± 6%, 3 phase, 50 HZ A.C supply. The installation shall be complete with flexible coupling and coupling guard as required. Fire pump shall have C.I. casing, CS diffusers, bronze impeller (hard finished and dynamically balanced) and S.S. (304) Shaft with mechanical seal, capable for delivering 2280 LPM at outlet head of 120 mts. to ensure a minimum pressure of 3.5 Kg/Sqcm at the farthest or topmost hydrant / sprinkler. Pump shall be capable of furnishing not less than 150% of rated discharge at a head of not less than 65% of the rated head. The shut off head shall not exceed 120% of rated head. b) Squirrel cage induction motor, TEFC type suitable for operation on 415 volts, 3 phase 50 HZ A.C supply, for the above pump with synchronous speed of 2900 RPM, conforming to IP 55 protection & class F insulation. The motor shall conform to IS 325-1978 (up to date) with flexible coupling and coupling guard, complete as required.c) Suitable cement concrete foundation with plaster,complete with antivibration arrangement of cushy foot mountings.MS epoxy painted common base frame for pump complete as required.Flow : 2850LPM Head : 88mwc and as per technical specifications and as directed by engineer in charge	7,98,995.00	7,98,995.00
1102	2.00	Supplying, installation, Testing and commissioning ofdiesel engine driven main fire pump suitable for automatic operation and consisting of following: complete in all respect as required a) Horizontal type, multistage, centrifugal pump of cast iron body & bronze impeller with stainless steel shaft, mechanical seal to ensure a minimum pressure of 3.5 Kg / sq.cm. at highest and farthest outlet at specified flow of 2280 lpm at 120 Mtr head conforming to IS 1520 b) Suitable HP, 1500 RPM water cooled with radiator, diesel engine conforming to relevant BS & IS standard complete with auto starting mechanism, 12 Volts / 24 Volts electric starting equipment, Diesel Tank, exhaust pipe extended upto 1 m. outside pump house duly insulated with50mm thick glass wool with 1.0mm thick aluminum sheet cladding, residential silencer, instruments and protection as per specification, stop solenoid for auto stop in the event of fault with audio indications, painted with post office red colour etc as required. c) M.S. Fabricated common base plate, coupling, coupling guard, foundation bolts etc as required. d) Suitable cement concrete foundation duly plastered with anti-vibration pads.as per technical specifications and as directed by engineer in charge Makes of Engines : Kirloskar / Cummins. Makes of Pumps : Kirloskar / Mather&Platt.	10,34,413.00	20,68,826.00
1103	1.00	Supply, installation, testing and commissioning of jockey pump (pressurisation pump) comprising of the following:a) Vertical centrifugal pump, suitable for operation on 415 volts ± 6%, 3 phase, 50 HZ A.C supply. The installation shall be complete with Flexible coupling and coupling guard, complete as required.The pump casing shall be CI, shaft shall be SS & impeller / shaft sleeve / casing wearing ring shall be bronze.The pump shall be provided with mechanical seal .b) Squirrel cage induction motor TEFC type for operation on 415 V, 3 phase 50 HZ AC supply for the above pump with a synchronous speed of 2900 R.P.M. with flexible coupling and coupling guard etc. as required. Flow : 180 LPM Head : 120mts and as per technical specifications and as directed by engineer in charge	1,56,945.00	1,56,945.00
1104	39.00	Providing, laying, testing & Commissioning of 250 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete.Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	5,873.00	2,29,047.00
1105	54.00	Providing, laying, testing & Commissioning of 200 mm dia 'C' Class MS pipes conforming to IS 3589 and 1239 including fittings like elbows, tees, flanges, tapers, nuts, bolts, gaskets including transportaiton and painting with two coats of red oxide paint and one coat of post office red enamel paint and all labour charges and cost of all accessories etc., complete. Makes: Jindal / Hissar / Tata pipes/Prakash Surya.	5,094.00	2,75,076.00
1106	6.00	Providing and fixing 250 mm dia C.I. sluice valves (with cap) complete with bolts, nuts, rubber insertions etc. (the tail pieces if required will be paid separately) : Class II (pn 1.6) for finished item of work and as directed by Engineer-In-Charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/Zolotto / SANT/NEWAGE	70,850.00	4,25,100.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1107	9.00	Providing and fixing 200 mm dia C.I. sluice valves (with cap) complete with bolts, nuts, rubber insertions etc. (the tail pieces if required will be paid separately) : Class II (pn 1.6) for finished item of work and as directed by Engineer-In-Charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/Zolotto / SANT/NEWAGE	49,985.00	4,49,865.00
1108	9.00	Providing and fixing 150 mm dia C.I. sluice valves (with cap) complete with bolts, nuts, rubber insertions etc. (the tail pieces if required will be paid separately) : Class II (pn 1.6) for finished item of work and as directed by Engineer-In-Charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/Zolotto / SANT/NEWAGE	35,945.00	3,23,505.00
1109	9.00	Providing and fixing 100 mm dia C.I. sluice valves (with cap) complete with bolts, nuts, rubber insertions etc. (the tail pieces if required will be paid separately) : Class II (pn 1.6) for finished item of work and as directed by Engineer-In-Charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/Zolotto / SANT/NEWAGE	26,650.00	2,39,850.00
1110	3.00	Providing and fixing 65 mm dia C.I. sluice valves (with cap) complete with bolts, nuts, rubber insertions etc. (the tail pieces if required will be paid separately) : Class II (pn 1.6) for finished item of work and as directed by Engineer-In-Charge. Makes: Audco / Kirloskar / BDK / H-Shankar / Leader/Zolotto / SANT/NEWAGE	17,550.00	52,650.00
1111	3.00	Providing, installation, testing and commissioning of 200 mm dia dual Plate non - return valve of following sizes confirming to IS: 5312 complete with rubber gasket, GI bolts, nuts, washers etc as required as per technical specifications and as directed by engineer in charge Makes: BDK / NEU-G / Leader/ Zolotto / SANT	13,608.00	40,824.00
1112	9.00	Providing, installation, testing and commissioning of 150 mm dia dual Plate non - return valve of following sizes confirming to IS: 5312 complete with rubber gasket, GI bolts, nuts, washers etc as required.as per technical specifications and as directed by engineer in charge Makes: BDK / NEU-G / Leader/ Zolotto / SANT	9,762.00	87,858.00
1113	3.00	Providing, installation, testing and commissioning of 100 mm dia dual Plate non - return valve of following sizes confirming to IS: 5312 complete with rubber gasket, GI bolts, nuts, washers etc as required. as per technical specifications and as directed by engineer in chargeMakes: BDK / NEU-G / Leader/ Zolotto / SANT	5,176.00	15,528.00
1114	3.00	Providing, installation, testing and commissioning of 65 mm dia dual Plate non - return valve of following sizes confirming to IS: 5312 complete with rubber gasket, GI bolts, nuts, washers etc as required. Makes: BDK / NEU-G / Leader/ Zolotto / SANT	4,661.00	13,983.00
1115	9.00	Providing and fixing of 200 mm dia Expansion Bellow of durable high tensile nylon/polyester cord body, high tensile nylon flanges with positive sealing, NEOPRENE rubber outer Cover & with Leakproof Abrasion resistant seamless lining of Rubber, Metal Retaining Rings embedded in body, including all necessary accessories like nuts, bolts etc. all complete of approved make as directed by the Engineer in charge	5,200.00	46,800.00
1116	9.00	Providing and fixing of 150 mm dia Expansion Bellow of durable high tensile nylon/polyester cord body, high tensile nylon flanges with positive sealing, NEOPRENE rubber outer Cover & with Leakproof Abrasion resistant seamless lining of Rubber, Metal Retaining Rings embedded in body, including all necessary accessories like nuts, bolts etc. all complete of approved make as directed by the Engineer in charge	3,800.00	34,200.00
1117	3.00	Providing and fixing of 100 mm dia Expansion Bellow of durable high tensile nylon/polyester cord body, high tensile nylon flanges with positive sealing, NEOPRENE rubber outer Cover & with Leakproof Abrasion resistant seamless lining of Rubber, Metal Retaining Rings embedded in body, including all necessary accessories like nuts, bolts etc. all complete of approved make as directed by the Engineer in charge	3,000.00	9,000.00
1118	3.00	Providing and fixing of 65 mm dia Expansion Bellow of durable high tensile nylon/polyester cord body, high tensile nylon flanges with positive sealing, NEOPRENE rubber outer Cover & with Leakproof Abrasion resistant seamless lining of Rubber, Metal Retaining Rings embedded in body, including all necessary accessories like nuts, bolts etc. all complete of approved make as directed by the Engineer in	1,800.00	5,400.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1119	6.00	Supply and fixing 2 way fire brigade connection of cast iron body with 2 Nos Gun metal Male instantaneous inlet couplings complete with cap and chain as required for 100mm dia MS pipe connection, conforming to IS 904 as required. Makes: Newage/ Winco/ Padmini / Safex / Minimax/NewTech	8,874.00	53,244.00
1120	12.00	Providing, fixing ,testing and commissioning of Pressure switches in 150 MM DIA pipe line including connection etc as required. Makes: Makes: Danfoss / Indfoss /Systemsensor/Honeywell	3,235.00	38,820.00
1121	9.00	Supply, installation, testing and commissioning of 200mm dia stainless steel Y? strainer fabricated out of 1.6 mm thick SS 304 confirming to IS specifications complete with rubber gasket, GI bolts , nuts, washers etc as required.	25,144.00	2,26,296.00
1122	3.00	Supply, installation, testing and commissioning of 100mm dia stainless steel Y? strainer fabricated out of 1.6 mm thick SS 304 confirming to IS specifications complete with rubber gasket, GI bolts , nuts, washers etc as required.	6,360.00	19,080.00
1123	6.00	Providing and fixing of gun metal fire Brigade suction Hose coupling (Draw-out Connection) with nut for female coupling as per IS:902- 1974 complete with 100 mm dia. G.I. Suction pipe and 100 mm dia. 1No C.I. Foot valve flanged (to be connected to static water tank).Makes: As per list of recommended brands. Makes: Newage/ Winco/ Padmini / Safex / Minimax/NewTech/Honeywell/ Kartar.	8,923.00	53,538.00
1124	3.00	Designing, Supply, Transportation, Installation, Testing and commissioning of system controller to control operation of main electric fire pump, diesel pump, Pressurization pump, Terrace pump in sequence as per specification consisting of relays, timers. Sensors, annunciation window for fault indication, complete as per specification INCOMING : 630A, 50kA 4 Pole MCCB, Ics=100% Icu Rating Digital Voltmeter 0-500V with selector switch Digital Voltmeter 0-500V with selector switch LED type RYB phase indicating lamps, ON, OFF, trip indicating lamps Set of Copper Bus Bar 800Amps OUT GOING : (Note : All outgoing feeders for pumps should have digital Ammeter with selector switches, and LED type ON, OFF, trip indicating lamps) A) MAIN FIRE PUMP: 200 Amp, 50kA TPN MCCB, Ics=100% Icu, with fully automatic Star/Delta starter suitable for 75-100 HP pump with overload protection, current sensing type single phase preventor complete with all acceessories and internal wiring required for automatic operation, selector switch for local/remote, auto/manual/OFF operation. - 2 sets B) JOCKEY PUMP 100 Amp, 50kA TPN MCCB, Ics=100% Icu, with Suitable HP fully automatic Star/Delta starter with overload protection, current sensing type single phase preventor complete with all acceessories and internal wiring required for automatic operation, selector switch for local/remote, auto/manual/OFF operation. - 2 sets C) DIESEL ENGINE CONTROL Control for diesel engine comprising - Automatic/Manual selctor switch & 3 attempts starting device, timers and relays as required, push buttons, start/stop in manual mode Indicating lamp for high/ Low Lub. Oil pressure, High Water Temp and Engine on indication Battery charger suitbale for 12V/24 V DC with boost and trickle selector switch, 0-30 V DC volt meter, and 0-20 A DC Ammeter All standard relays and accessories for automatic operation of diesel engine System Controller. Makes: L&T- D shine / Schneider-NS NSX/Legrand DP X3/ Siemens-3VL / Hager-h3/C&S -Winbreak2 Makes of Meters : Schneider (Conzerve) / L&T / Elmeasure / Siemens.	5,52,638.00	16,57,914.00
1125	65.00	Supply, laying and dressing of 3.5Core 120 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Aluminium conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	1,008.00	65,520.00
1126	653.00	Supply, laying and dressing of 3.5Core 95 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Aluminium conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	820.00	5,35,460.00
1127	235.00	Supply, laying and dressing of 3.5Core 35 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Aluminium conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	377.00	88,595.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1128	45.00	Supply, laying and dressing of 3 Core 6 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Copper conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	340.00	15,300.00
1129	30.00	Supply, laying and dressing of 6 Core 1.5 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Copper conductor unarmoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	222.00	6,660.00
1130	45.00	Supply, laying and dressing of 4 Core 1.5 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Copper conductor unarmoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	194.00	8,730.00
1131	50.00	Supply, laying and dressing of 2 Core 2.5 Sq.mm 1100 volt grade FRLS XLPE insulated PVC sheathed Copper conductor unarmoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	178.00	8,900.00
1132	35.00	Providing and fixing 6 SWG dia GI wire on surface or in recess for loop earthing along with existing cable complete as required.	18.00	630.00
1133	3.00	Providing and fixing double flanged vertical air vessel fabricated from 10mm M.S. plate with dished ends from 10mm M.S. plate, outside with one coat of primer and two coats of synthetic enamel paint of approved shade, complete with approved quality of pressure switches, pressure gauges and all other required accessories to operate commonly main fire pump, sprinkler pump, Diesel Fire pumps and Jockey pumps at drop of pressure automatically at required pressure setting complete as required and as specified . Recommended dia. : 450mm Height of shell : 2000mm Working pressure :18 Kg/Sq.cm Test Pressure : 36 Kg/Sq.cm	22,122.00	66,366.00
1134	35.00	Supply,transporatation & installation of 150mm x 50mm x 1.6mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/BEC/Reco Steel/NSK/Patny/Akshara made up with raw material like Tata/Jindal/JSW	492.00	17,220.00
1135	35.00	Supply,transporatation & installation of 300mm x 62.5mm x 2.0mm of Hot Dipped Galvanized Iron perforated cable trays without cover, including horizontal and vertical bends, reducers tees,cross members and other accessories as required and duly suspended from the ceiling/Wall with suspenders etc., complete. Make: Profab/Inidana/legrand/BEC/Reco Steel/NSK/Patny/Akshara made up with raw material like Tata/Jindal/JSW	1,088.00	38,080.00
1136	45.00	Providing and fixing 25 mm x 6 mm G.I strip in 40 mm dia Nominal bore heavy grade GI Pipe of 2.5 Mtrs long connected enclosed in C.C.ring of 450mm dia with R.C.C. Slab cover duly providing staggered holes filling with salt and charcoal from the bottom of the pipe giving earth connection from electrode through G.I strip of 25 x 6mm x 200mm length with all accessories and labour charges complete, as per IS specifications 732/1982 (Part II) with earth electrode including connection with G.I,nut, bolt, spring, washer excavation and re - filling etc. as required	5,898.00	2,65,410.00
1137	70.00	Providing and fixing 25 mm x 6 mm G.I.Strip in on surface or in recess for loop earthing complete etc. as required.	110.00	7,700.00
1138	650.00	Providing & fixing M.S. structural work fabricated from standard section e.g. M.S rounds, angles, channels, plates including cutting to size,drilling,welding fixing and welding to insert plates in RCC structural members as directed by engineer-in-charge including cutting and making good the walls, ceilings and floors (for all fabricated pipe supports as instructed / approved by the Engineer-In-Charge.)	93.00	60,450.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1139	153.00	Supplying and fixing of hose cabinet of size 750mm X600mm x 250mm made of No 16 gauge SWG CRCA sheet with 6mm thick glazed glass door including necessary locking arrangement suitable to accommodate 2 Nos 15 mtr long Hose pipe, 1 No branch pipe, mounted on wall OR raised brick platform and duly painted with Post office red externally and white internally with synthetic enamel paint complete in all respect, for external hydrant as required.Makes:Minimax/Safex/Newage/Winco/Padmini/NewTech/Kartar.	4,289.00	6,56,217.00
1140	597.00	Supplying and wrapping the anticorrosive material for buried pipes with coating of Primer and wrapping with 4 mm thick polymer corrosion resistant tape as per IS : 10221 with 15 mm overlap as per specificatios for 150 mm dia pipe for finished item of work and as directed by Engineer-In-ChargeMakes: IWL(PIPE KOT) or its equivalent	444.00	2,65,068.00
1141	250.00	Supplying and wrapping the anticorrosive material for buried pipes with coating of Primer and wrapping with 4 mm thick polymer corrosion resistant tape as per IS : 10221 with 15 mm overlap as per specificatios for 100 mm dia pipe for finished item of work and as directed by Engineer-In-ChargeMakes: IWL(PIPE KOT) or its equivalent	400.00	1,00,000.00
1142	100.00	Supplying and wrapping the anticorrosive material for buried pipes with coating of Primer and wrapping with 4 mm thick polymer corrosion resistant tape as per IS : 10221 with 15 mm overlap as per specificatios for 80 mm dia pipe for finished item of work and as directed by Engineer-In-ChargeMakes: IWL(PIPE KOT) or its equivalent	341.00	34,100.00
1143	300.00	Supplying, installing, testing and commissioning of 300mm dia R.C.C NP2 class Hume pipe laid to the required level and grade with collars joining in CM 1:3 and filling the excavated trench with approved quality quarry dust on sides, bottom and top surface of pipe with all leads and lifts, making necessary connections as required etc.,complete.	839.00	2,51,700.00
1144	3.00	Supply instalation of 50 ltr. Trolly mounted Mechanical foam type fire extinguisher with required accesaries as per IS-10204. Makes: Ceasefire/Minmax/Safex / Kenex / Bharat / Reliance/NewTech/Kartar	55,250.00	1,65,750.00
1145	17.00	Supply instalation of 9 ltr. Mechanical foam type fire extinguisher with required accesaries as per IS-10204. Makes: Ceasefire/Minmax/Safex / Kenex / Bharat / Reliance/NewTech/Kartar	3,510.00	59,670.00
1146	18.00	Providing and fixing addressable monitor module with existing flow to monitor the water flow in sprinkler system , operating on looped power and install as per site requirement complete as required and as specified omplete as per specifications and as required. Makes: Notifier / Edwards/Bosch only	4,915.00	88,470.00
1147	60.00	Supply and fixing G.I. 4 nos. Fire buckets 9 litre capacity filled with dry sand and fixed on wall hook made out of canopy type 13mm dia MS structure for 4 nos. bucket. conforming IS : 2546 - 1974 complete etc. as directed by Engineer In Charge and as per technical speicifications and of approved make.	2,998.00	1,79,880.00
1148	7,000.00	Supply, laying ,testing and commissioning of 4-pair, Cat6 Solid 6 UTP cable (Third party ETL Intertek tested up to 700 MHZ) to support 1Gbps with Cross (+) filler pair separator & PVC sheath 23 AWG, STP/UTP Cable , Meets or exceeds ANSI/TIA-568-C.2 and UL Listed &RoHS Compliant in the existing raceways /PVC conduits including making connections to information outlets and patch panels with ferruling at both ends for identification with necessary tools for punching stripping crimping and testing required etc., complete. Makes: Systimax /Panduit/ Siemond/ Legrand.	51.00	3,57,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1149	21.00	Supply, install, test and commissioning of addressable peer to peer Networkable analogue addressable type 2 Loop fire alarm control panel with minimum 1500 Character / 240X64 Pixel / 7inch Touchscreen graphic LCD display. The panel should be equipped with sufficient numbers of loop with 20% spare capacity, with each networkable intelligent fire alarm Control Panel having SLC with capacity of min 250 detectors/ devices in any combination (Min 120 Detector) with key pad, dual flash-based microprocessor technology, inbuilt USB Port for upload and down load the configuration tools, RS232 serial port for direct PC or modem connection, inbuilt NAC's, min 20 programmable Zonal LEDs and operates on 240V AC + 10% with 50 Hz with built in charger. The panel shall have fire, fault relays, option of BMS integration MODBUS/ BACKNET, graphical software for provision of TCP/ IP modules, Remote Access, Class 'X' wiring with provision of both class 'A' and class 'B' wiring in the SLC circuit, user friendly with communication facility to monitor & control the FACPs from a single window. The panel shall be suitable for minimum of 5000 event record facility, event fetch from FACP facility and the single panel shall be suitable for min 2000 fire zones and 200 Panels/ Nodes in one network with all other accessories required to successfully run the system. The panel shall be completed as per UL and FM/EN54 & VDS standards (The System cost shall be included of all necessary cards, modules, Panel enclosure, CPU and associated accessories to complete the system design). Makes: Notifier /Edwards/Bosch only	2,87,446.00	60,36,366.00
1150	21.00	Supply, Installation, Testing & Commissioning of Network Active Repeater Panel with 1500 Character / 240X64 Pixel / 7inch Touchscreen. The LCD shall Display all events / detectors, devices status of complete systems in the networked. Makes: Notifier /Edwards/Bosch only	1,50,909.00	31,69,089.00
1151	332.00	Supply, Installation, Testing & Commissioning of Analogue Addressable loop powered Sounder & Beacon with inbuilt isolator and having Min 15 distinct sound patterns/ multitone to indicate Exit doors and direct occupants for safe and fast evacuation and 100dB output with minimum 1Hz Frequency flash rate designed for IP65 requirements and approved to operate in ?10°C to +55°C temperature, complies with the essential requirement of the EMC Directive to be supplied with Junction Box, Glands and other mounting accessories for proper installation. Makes: Notifier /Edwards/Bosch only	6,611.00	21,94,852.00
1152	332.00	Supply, Installation, Testing & Commissioning of Dust and Vermin proof (Resettable) addressable analogue Manual call boxes along with Isolators inbuilt having front reset mechanism with 170° viewable LED and can be viewed from the distance of 7 M. also have inbuilt isolator having operating temperature from -40°C-70°C to initiate audio visual alarm in case of Human detection of fire. The manual call point must be indoor type with IP 44 rating. The call point must be resettable type without break glass.Makes: Notifier /Edwards/Bosch only	6,468.00	21,47,376.00
1153	132.00	Supply, Installation, Testing & Commissioning of Analogue Addressable Multi-sensor (Smoke & Heat) detector with LED with standard base having capacity of min 126 address combination. Operating temperature -40°C to 70°C & Humidity 0-95%. The detector should have polling 360-degree viewable LED with 5 class approved response modes all approved with the relevant standards, drift compensation and transient rejection. The detector should trigger heat alarm as per the A1R class requirement. The detector shall have facility to mount in different comprehensive environment like Hostile environment, Parking Garage, Precious storage, Ware house and normal working environments. The detector should have a self-locking mechanism and requires a special tool to remove this detector. The detector should have a hard address inside the base. The detector should be made of fire-retardant material & should be melt above 100-degree C. The detectors must be open for the cleaning of dust whenever required. The detector must have 4 nonvolatile memories to write the installation date & site codes. Makes: Notifier /Edwards/Bosch only	5,131.00	6,77,292.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1154	592.00	Supply, install, test and commissioning of Optical smoke detector with LED with standard base having capacity of min 126 address combination Operating temperature -40°C to 70°C &Humidity 0 95%. The detector should have polling 360-degree viewable LED with 5 class approved response modes all approved with the relevant standards, drift compensation and transient rejection. The detector shall have facility to mount in differen comprehensive environment like Hostile environment, precious storage, Warehouse and normal working environments. The detector should have a self-locking mechanism and requires a special tool to remove this detector. The detector should have a hard address inside the base. The detector must have nonvolatile memory to write the installation date & site codes. The detector should be made of fire-retardant material & should be mel above 100-degree C. The detectors must be openable for the cleaning of dust whenever required All the other specs should be as per the specification attached. Makes: Notifier /Edwards/Bosch only	4,642.00	27,48,064.00
1155	38.00	Supply, install, test and commissioning of Analogue Addressable Heat detector and LED with standard base having capacity of min 126 address combination. Storage temperature -40°C to 80°C & Humidity 0-95%. The detector shall have facility to mount in different comprehensive environment like Hostile environment, Precious storage, Ware house and normal working environments. The heat detector must trigger the alarm as per the A1R/A2R/A2S/CR/CS requirement. The detector should have self-locking mechanism and requires special tool to remove this detector. The detector must have nonvolatile memory to write the installation date & site codes. Makes: Notifier /Edwards/Bosch only	5,009.00	1,90,342.00
1156	398.00	Supply, install, test and commissioning of Analogue addressable Control (Input/Output) module with inbuilt relay and isolator with LED indicator, approved to operate in ?10°C to +55°C temperature, complies with the essential requirement of the EMC Directive to be supplied with Junction Box and other mounting accessories for proper installation. In case of Manufacturer with single Input or Output module need to supply One quantity of each for line item.Makes: Notifier /Edwards/Bosch only	5,433.00	21,62,334.00
1157	120.00	Supply and Installation of Intalligent analogue addressable monitor modules including the cost of mounting accessories complete as per specifications and as required.Makes: Notifier /Edwards/Bosch only	4,915.00	5,89,800.00
1158	96.00	Supply, Installation, Testing & Commissioning of Loop isolation module which consists of LED. This LED shall be mounted with in a round polycarbonate encloser. Isolator Base for Isolators. Makes: Notifier /Edwards/Bosch only	4,915.00	4,71,840.00
1159	21.00	Supply installation Testing and commissioning of 3.0 KVA, 72/96VDC on line UPS system confirms to IS 16242(Part-I):2014 and IEC 60240-1: 2008 with IGBT technology pure sine wave output, double conversion with auto and manual static by pass switch single phase input / Single phase output. Makes: Numeric/APC/Fuji Electric/ Sakshham /Emerson.	48,625.00	10,21,125.00
1160	21.00	Supply and providing of battery rack for 5 to 10 batteries (42 AH)	3,749.00	78,729.00
1161	168.00	Supply and fixing of 12V 42 AH SMF battery with 3 years warranty including wire leads, connections etc complete. Makes: Quanta / Racket / Exide.	7,124.00	11,96,832.00
1162	432.00	Supply, installation, testing & commissioning of ONT box (300 x 300 x 75 mm) made out of 1.6 mm thick MS powder coated recessed in wall to house. ONT device supplyed by others.	930.00	4,01,760.00
1163	21.00	Supplying, installing,testing and commissioning solid state Amplifier of 500 W RMS out put in rack, including necessory control wires,jacks etc. Talk Back Panel : Talk back system :A suitable zone selector P.A. console and with CRCA sheet housing and control desk(rack) shall be provided for talk back system. Console shall have all call / call back facility complete with battery backup of same duration as of fire alarm system and it should also work on AC single phase Power min. 16 Loop/zone Makes: Notifier / Edwards/Bosch/Agni/	42,435.00	8,91,135.00
1164	332.00	Supplying, installation, testing & commissioning talk back slave station in surface/recess suitable for operation on simplex mode complete with P.T.T. knob & speaker/microphone enclosed in a M.S.(16 SWG)/ ABS box with break glass in front etc. complete as required Talk back unit : (The box of talnk back speaker in staircase shall be of MS duly powder coated in red color with mounting of 6W wall mounted speaker with push to talk facility of approx. size of suitable size of approved make and material with all accessories as required to complete the job, with internal wiring, cable glands etc as required. Solid state Amplifier of suitable wattage shall be provided, RMS out put in rack, including necessary control wires, jacks etc) Makes: Notifier / Edwards/Bosch/Agni/	3,810.00	12,64,920.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1165	332.00	Supply, installation, testing and commissioning of recess/surface mounting Talk Back Jacks with stainless steel face plates for connections of Fireman's handsets including the cost of supplying all mounting accessories and complete as per specifications and as required Makes: Notifier / Edwards/Bosch	4,330.00	14,37,560.00
1166	332.00	Supply installation testing and commissioning of two way Talk Back handsets to initiate audio interface complete etc with required accessories etc as required for finished item of work as directed by Engineer in charge. Makes: Notifier / Edwards/Bosch/Agni/	5,480.00	18,19,360.00
1167	4,980.00	Supply, Laying, Termination of ISI Certified 4C x 1.5 sqmm (for Signal & Field devices, Third Party Integration etc....) ATSC, FRLS PVC insulated, Farmored, Tinned Copper, twisted, shielded, PE insulated, Cable with proper ferrules, lugs, and other necessary accessories. The spec shall meet the system manufacturer specifications including all charges complete etc., as directed by Engineer in Charge/ departmental authorities. Makes: Finolex/RR kabel/ Havells/ KEI/ Polycab/ Gloster/V-Guard/HPL/GM/ Million/Goldmedal/Anchor.	107.00	5,32,860.00
1168	1,401.00	Supply, laying and dressing of 4 Core 1.5 Sq.mm 1100 volt grade XLPE insulated PVC sheathed FRLS Copper conductor unarmoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning for fire alarm system. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	194.00	2,71,794.00
1169	7,000.00	Supply, laying and dressing of 2 Core 1.5 Sq.mm 1100 volt grade XLPE insulated PVC sheathed FRLS Copper conductor armoured XLPE/PVC cables as per specification in cable trays, shafts, clamped includes anchor fastners wall with suitable clamps, saddles fixing bolts including connecting testing and commissioning for fire alarm system. Make: Torrent / Universal / Havells / KEI /Polycab/RR Kabel.	169.00	11,83,000.00
1170	242.00	Supply & Installation, Testing and commissioning of trolley mounted, electrically operated triplex plunger pumps with 2-H.P, 1-Phase 1450 rpm, 1-phase motor with high pressure triplex pump of 5-0 kg/cmv with nylon hydraulic hose pipe of 3/4" dia, 5mt height for suction and 3/8" dia 30mt length for delivery with all required nozzles has values, high pressure gun, fittings etc with come of 3-core,2.5 Sq mm flexible copper cable with 3-pin 16A top and all required accessories and labour charges for erection, testing including transportation etc complete, Make of motor: crompton, kiroken, texmo,suguna with ISI mark, Pump: Green tech, Kisan, Ultrajet, Pressurejet, Ambica tools, searaa or any ISI	47,292.00	1,14,44,664.00
1171	242.00	Supplying & fixing of 230V, 20-25A Industrial Plug and Socket with 1 No of 20A DP MCB 10KA C/D Curve ISI Mark for control in SS enclosure as per IS 8623; IS 13032; IEC 61439-3 on surface or in recess, and complete with connections, testing and commissioning etc. as required and as directed by Engineer in Charge. Enclosure Makes: Legrand(Ekinox 3) / Schneider-A9/Hager - Novello+/ Seimens/Crabtree Xpro classique-II/L&TNewrange/ Indo Asian-Opti Pro/ HPL (Techno) MCB Makes: Legrand-DX3 / Schneider-A9/Hager-h3/ Siemens-5SX4/ Havells STADx /L&T-AU/Indo Asian-Opti pro/ HPL (Techno)	1,775.00	4,29,550.00
1172	1,450.00	Supply and Fixing of 25mm dia 16 SWG (ISI Mark) MS Surface conduit pipe duly threading at Joints with all required accessories fixing on Separators with chromium plated base saddles and No.18 SWG MS box for light, fan and separate plug points including cost of Cement, all materials, accessories and all labour charges etc., complete as per detailed technical specifications and approved make. Makes: NAI / Bharath / GB / AKG/Precision etc.	318.00	4,61,100.00
1173	9.00	Supply, installation in position, testing and commissioning of semi automative Organic Waste Converter with inbuilt shredder, comprising composting machine in SS 304 grade,inbuilt Heater,Exhaust inclusive of all accessories as complete as required. Total organic waste generate per day : 1500 kg/day Volume reduction:80-90% Heater System- -Electrical Heater, Processing Time -24 Hrs.	19,00,000.00	1,71,00,000.00
1174	36.00	Providing and fixing Wheeled Bins with lids of below material and capacity for solid waste collection within building.HDPE: Capacity: 240 L capacity	5,100.00	1,83,600.00
1175	432.00	Supply & Installation - Centralized Segregated Garbage Collection System---TThroat Piece - Manufactured from SS 304 sheet, rolled and seam welded for watertight joints. TIG welded throat, supported by hot dip galvanised structural steel brackets 40 X 40 X 5mm, and anchor connected to an available RCC structure.	21,650.00	93,52,800.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1176	432.00	Supply & Installation - Centralized Segregated Garbage Collection System---Intake Hopper ? Interlocking - 12X15 Auto closing Bottom pivoted, Top opening, Self Latching, 90 Min Fire rated as per UL (Underwriter's Laboratories, USA, UL 10B Labeled)with Interlocking arrangement for 'One User' at a time. The controllers for Interlocking system is certified by UL- Frame 2mm thick & double skin shutter 1.5mm thick with Rockwool as Infill.)-Intake on 1st to 12th floor	22,963.00	99,20,016.00
1177	756.00	Supply & Installation - Centralized Segregated Garbage Collection System---Intermediate Pieces (In Mtrs.) - All Chutes are manufactured to suit building floor heights & the site conditions to fill the gap between two consecutive intake door pieces. MOC and dia shall remain same as that of total garbage chute system.	10,427.00	78,82,812.00
1178	36.00	Supply & Installation - Centralized Segregated Garbage Collection System---Discharge piece	12,888.00	4,63,968.00
1179	36.00	Supply & Installation - Centralized Segregated Garbage Collection System-Offset Piece - Similar to the Intermediate Piece, but installed as the chute's lowermost section.Designed to meet offset requirements, it is 3mm thick and includes an additional stiffner pad for point load impact. As a result, trolleys are less likely to crack & enhance the life	36,350.00	13,08,600.00
1180	36.00	Supply & Installation - Centralized Segregated Garbage Collection System Discharge end Fire rated Door - Fire Rated Rolling type door is held in place at the top of the slope by a UL-listed fusible connection. In the event of a fire, the temperature exceeds 74 degrees Celsius ,the fusible link fuses and the door within the housing on the slider will block off the heat flow up in the chute.	28,231.00	10,16,316.00
1181	36.00	Supply & Installation - Centralized Segregated Garbage Collection System---Sanitation Unit - Provide a disinfecting and sanitising unit for installation in line with the flushing spray head, including a 35L capacity disinfectant PVC tank, allied piping, ventilation, galvanised sheet enclosure and electric connectors.	30,441.00	10,95,876.00
1182	36.00	Supply & Installation - Centralized Segregated Garbage Collection System---Exhaust Piece with 300mm Vent - We considered a reduced diameter of 300mm vent going above the roof level 1.2 metres with the same MOC as the chute	28,830.00	10,37,880.00
1183	36.00	Supply & Installation - Centralized Segregated Garbage Collection System---Interlocking Control Panel - Designed as per UL stdandard, with digital display, required buttons & indicators. It is provided with potential free contact for fire alarm, thus in case of fire, all intake hoppers get locked. Incase of maintenance or fault in intake hopper, it is isolated from system and Rest of the chute system shall be working.	40,744.00	14,66,784.00
1184	234.00	Supply & Installation - Centralized Segregated Garbage Collection System---Fire sprinklers - HD make fire sprinkler 68 Deg.C, standard response & 1.2"BSPT, K-5.6, Pendent, Crome finish.	501.00	1,17,234.00
1185	36.00	Supply & Installation - Centralized Segregated Garbage Collection System---Trolley (660Ltr)- HDPE trolley standard 660Ltr capacity with lead and 4 wheels,Compatible to municiple compactor For Dry Garbage	35,919.00	12,93,084.00
1186	468.00	Supply & Installation - Centralized Segregated Garbage Collection System--Installation Charges	4,000.00	18,72,000.00
1187	54.00	Supply, fabrication, installation and commissioning of Cylinder manifold for (2 x 70) of 14.2KG(as per stipulation) Cylinders in Two tier) as per drawing including all accessories and components as listed below. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials (The cylinder deposit will be taken care by Builder) 40mm dia MS-Seam Less pipe line schedule 40 seam less of adequate length. Makes: Tata/Jindal/Essar/MSL/ISMT or its equivalent as approved by the competent authority.	1,650.00	89,100.00
1188	210.00	Supply & installation of Cylinder Adaptor - Cast Aluminium MECV thread Type. Makes: UW/Gaso/Globe or its equivalent as approved by the competent authority.	490.00	1,02,900.00
1189	210.00	Supply & installation of flexible Cylinder Pigtail - IS9573:2012 - Type 2 - 3ft long LPG hose for manifold. Makes: UW/Gaso/Globe or its equivalent as approved by the competent authority.	400.00	84,000.00
1190	210.00	Supply & installation of Manifold NRV - Commercial Thread Brass Type-FECVXMECV. Makes: UW/Gaso/Globe or its equivalent as approved by the competent authority.	525.00	1,10,250.00
1191	9.00	Supply, fabrication, installation and commissioning of Cylinder manifold for Fire safe CS Flange-end Type Ball Valve-40MM. Makes: L&T/Hawa/Marck or its equivalent as approved by the competent authority.	8,650.00	77,850.00
1192	6.00	Supply, fabrication, installation and commissioning of Pressure guages 0 - 10 Kg with control valve. Makes:Hguru/FIEBIG/Baumer make SS or its equivalent as approved by the competent authority.	3,500.00	21,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1193	21.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage-1 consisting of the following. Fire safe CS Flange-end Type Ball Valve-25MM. Makes: L&T/Hawa/Marck or its equivalent as approved by the competent authority.	5,765.00	1,21,065.00
1194	6.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage-1 consisting of the following-Pressure guages 0 - 4 Kg with control valve.Makes:Hguru/FIEBIG/Baumer make SS or its equivalent as approved by the competent authority.	3,500.00	21,000.00
1195	3.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage-1 consisting of the following. The system shall be connecting two LPG cylinder manifolds with 25mm dia MS Pipe. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Auto Change Over valve with in built pressure Regulator-ACM4. Makes: UW or its equivalent make as approved by the competent authority.	24,700.00	74,100.00
1196	6.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage-1, 1 " Regulator, P O to 17 Kg/Cm2, O.P.Oto 2 Kg, adjustable flow rate-1 100 Nm3/hr. End conenction flanged end 150	7,500.00	45,000.00
1197	6.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage-1 consisting of the following. The system shall be connecting two LPG cylinder manifolds with 25mm dia MS Pipe. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Gas Filter -F2 without pressure gauge & valve. Makes: UW/Vanaz or its equivalaent make]	5,500.00	33,000.00
1198	3.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage-1 consisting of the following. The system shall be connecting two LPG cylinder manifolds with 25mm dia MS Pipe. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Flame Arrestor flanged end. Makes: UW or its equivalaent make	25,350.00	76,050.00
1199	57.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage ? 2 consisting of the following. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Fire safe CS Flange-end 150 class type ball valve-25mm. Makes: L&T/Hawa/Marck or its equivalent as approved by the competent authority.	5,765.00	3,28,605.00
1200	18.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage ? 2 consisting of the following. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Pressure Regulator with OPSO & UPSO - B25. Makes: Clesses or its equivalent as approved by the competent authority.	31,000.00	5,58,000.00
1201	18.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage ? 2 consisting of the following. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Pressure guages 0 - 4 Kg with control valve. Makes:Hguru/FIEBIG/Baumer make SS or its equivalent as approved by the competent authority.	3,500.00	63,000.00
1202	18.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage ? 2 consisting of the following. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Pressure gauges 0 - 600 milibar with control valve. Makes:Mahavir/gasafe or its equivalent as approved by the competent authority.	1,950.00	35,100.00
1203	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Isolation ball valves-15mm Makes:I.TaP/Comap/VGN or its equivalent as approved by the competent authority.	650.00	2,80,800.00
1204	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Pressure regulator with UPSO. MakesGreen globe or its equivalent as approved by the competent authority.	575.00	2,48,400.00
1205	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Prepaid smart card based Gas Meter. Makes: Quinchuan or its equivalent as approved by the competent authority.	3,900.00	16,84,800.00
1206	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Brass/MS fitting Set	850.00	3,67,200.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1207	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Gas Tap 1/4" (Nozzle Type)	325.00	1,40,400.00
1208	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Suraksha Hose pipe-1.5 Mtr	225.00	97,200.00
1209	432.00	Supply, fabrication, installation and commissioning of Pressure Regulation Stage 3 with meter near the kitchen duct of the each floor flats. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials Meter Plate/Supporting plate	160.00	69,120.00
1210	1,500.00	Supply & installation of M.S. ERW C class Pipeline As per IS 1239 which includes all the required fittings. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials A) From PRS 1 to PRS 2 Main Line 25 NB Dia MS ERW Pipe Makes: Tata/Jindal/Essar/MSL/ISMT or its equivalent as approved by the competent authority.	835.00	12,52,500.00
1211	1,800.00	Supply & installation of M.S. ERW C class Pipeline As per IS 1239 which includes all the required fittings. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials B) From PRS 2 to PRS 3 Header (Riser) 25 NB Dia MS ERW Pipe Makes: Tata/Jindal/Essar/MSL/ISMT or its equivalent as approved by the competent authority.	800.00	14,40,000.00
1212	216.00	Supply & installation SS 316 Seamless Sch 40 pipe line for underground from gas bank to Stilt level of ground floor as per approved drawings. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings / makes of materials. B) From PRS1 upto G.floor stilt level size 25 NB dia SS 316 Sch 40 pipe (Sml/Ismt) B) From PRS 2 to PRS 3 Header (Riser) 25 NB Dia MS ERW Pipe Makes: Tata/Jindal/Essar/MSL/ISMT or its equivalent as approved by the competent authority.	3,670.00	7,92,720.00
1213	900.00	Supply & installation of M.S. ERW C class Pipeline As per IS 1239 which includes all the required fittings. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials B) From PRS 2 to PRS 3 Taping 15 NB Dia MS ERW Pipe from tapping to PRS-3 of each flat Makes: Tata/Jindal/Essar/MSL/ISMT or its equivalent as approved by the competent authority.	600.00	5,40,000.00
1214	36.00	Supply & installation of M.S. ERW C class Pipeline As per IS 1239 which includes all the required fittings. The rate shall include supply of all the materials and labour to carry out the job and shall be as per the drawings/ makes of materials B) From PRS 2 to PRS 3- Fire safe CS Flange-end Type 150 Ball Valve-25MM for Riser line (Makes: L&T/Hawa/Marck make)	5,765.00	2,07,540.00
1215	1,728.00	Supply and installation of 12 mm (0.6mm Thickness) dia Copper pipe from Kitchen isolation valve to Kitchen	660.00	11,40,480.00
1216	6.00	Gas Bank Safety equipments - 2 No's Sand Buckets,2 No's Water buckets,Sign Boards & 2 No's ABC power Type 9Kg capacity Fire Exstinguishers	15,000.00	90,000.00
1217	6.00	Supply & installation of Leak detection System at gas bank with 2 sensors & one Control panel along with Alarm	60,000.00	3,60,000.00
1218	18.00	Gas Bank : Hydro Test-Main Line,Header,Riser&Tapping - with nitrogen purging Complete MS Pipe Line Testing as per IS 6044 standards as directed by Engineer-In-Charge.	1,25,000.00	22,50,000.00
1219	18.00	Submission of online applciations and getting approvals from Oil Companies either HPCL/IOCL/BPCL or any other comapanies as per the guidelines issued by ONGC/Petroleum dept, Govt of India and as directed by Engineer-In-charge.	1,00,000.00	18,00,000.00
1220	3.00	Providing necessary civil works like construction/erection of scaffholding and core cutting works in walls for passing of gas pipe lines of approved size and dia in all dwelling units and as directed by Engineer-In-charge..	10,00,000.00	30,00,000.00
1221	210.00	Supply and delivery of 14.2 Kg cylinders of approved company either HPCL/IOCL/BPCL or any other companies by means of paying necessary deposit charges and installing the same at site as per approved plan layout as directed by Engineer-In-Charge.	2,400.00	5,04,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1222	432.00	Supply, Installation,Testing & Commissioning of Automation switches (with 2/4 channel relay, indicator,etc) compatible to mechanical touch and remote operation (with Wifi dual in wall relay/ RF like Z wave, Zigbee etc, latest technology during supply) for control of light & fan (not less than 20 controls) in specified locations with necessary accessories as complete as required as per latest technology in market and as directed by Engineer-In-Charge. Makes: Legrand/Schneider/Havells/L&T	1,23,000.00	5,31,36,000.00
1223	432.00	Supply, Installation,Testing & Commissioning of Video door phone with touch screen- 7",brightness, contrast & colour settings-adjustable type, screen resolution upto 1024x600, talk back type, door lock release, inbuilt storage capacity up to 100 images, external memory card slot suitable upto 32 GB or above, Built in intercom facility, indoor monitors- to connect master & slave units upto 3/4, call forwarding facilities, automatic voice messages, with WIFI facility, outdoor monitors upto 2 door stations, external CCTV support upto 2 HD CCTV Cameras, adjustable micro-phone & speaker, night vision LED , Viewing angle upto 120 deg or above, suitable for hands free operation, Camera resolution 2 MP, Surface mounted type, suitable for electric lock release support (optional),weather proof type with necessary accessories as complete as required as per latest technology in market with suitable power adoptors, connections etc complete as directed by Engineer-In-Charge. Makes: Legrand/Honeywell/Godrej/Havells/Panasonic.	15,000.00	64,80,000.00
1224	900.00	Supply, Installation, Testing and Commissioning of ongrid Solar Photovoltaic Systems conforming to MNRE specifications as amended, consisting of Mono PERC half cut solar modules, net metering facility, necessary protections, earthing, mounted on Aluminium/GI structure of suitable strength with following components including Operation and maintenance for 3 years , GST, NAC complete as required:- a) Solar Photovoltaic Module of capacity 540 Wp or above, manufactured in India, conforming to IS 14286/IEC 61215, IS/IEC 61730-Part-1, IS/IEC 61730-Part-2. Solar Photovoltaic Module conversion efficiency shall not be less than 20%. PV modules used in solar power plants/ systems must be warranted for their output peak watt capacity, which should not be less than 90% at the end of 10 years and 80% at the end of 25 years. b) Power Conditioning Unit (PCU) of 350-800 V DC Input voltage range and 400 VAC, three phase, 4 wire, 50Hz +/- 2.5 Hz, output voltage suitable to generate AC Power with efficiency not less than 97%, total harmonic distortion less than 3% and suitable for ambient temperature from 0 to 50 degree C. The PCU shall adjust the voltage and frequency level to suit the Grid Voltage Frequency. c) Data Monitoring System complete with accessories. d) Fixing of Array junction box & Main junction box with IP 65 protection and termination arrangement for incoming and outgoing cable along with glands, lugs and other accessories etc. as required. e) Lightning and surge voltage protection. f) Connections & Interconnections by supplying & fixing required size XLPE insulated copper conductor 1.1 kV grade armoured power and control cables between solar modules, main power cable to grid supply PCU unit along with supplying & fixing of necessary channel/conduit lugs and other accessories etc. as required and as directed by Engineer-In-Charge.	58,950.00	5,30,55,000.00

1231	1,346.00	Providing and fixing factory made Modular Kitchen wall cabinets with open able shutter and shelves of 18mm thick High Moisture Resistant High Density Fibre Board material having back panel of 5.5 mm thick HMR HDF Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane on outer face and shelves 2 nos shall be both side pre laminated of approved quality with Soft closing hinges Hettich/Blum/Hafele make as per requirement, with build in C and J Sections handle (Gola profile - Hettich make or equivalent) fixed with S.S screws etc complete. The work shall be executed as per drawing, sample prepared in sample flat at site and direction of Engineer-in-charge. Cabinets as per approved Drawing, height & length as per drawing.	21,100.00	2,84,00,600.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1232	11,154.00	Providing and fixing modular factory made Wardrobe with open able shutter and sufficient number of drawer of 18mm thick as per approved drawing of High Moisture Resistant High Density Fibre (HMR HDF) Board Supertuff of approved brand material having back panel of 8 mm thick High Moisture Resistant High Density Fibre Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter and drawer front shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane of approved quality, Soft closing hinges of Blum/Hettich and Soft Close Quadro Slides as per requirement (of approved make) with S.S screws etc complete. Hanger rods, handles and locks Hettich make etc complete as per approved drawings.	23,000.00	25,65,42,000.00
1233	1,600.00	Providing and fixing modular factory made TV unit with open able shutter/glass shutter and sufficient number of drawer of 18mm thick as per approved drawing of High Moisture Resistant High Density Fibre (HMR HDF) Board of approved brand material having back panel of 8 mm thick High Moisture Resistant High Density Fibre Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter and drawer front shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane/glass of approved quality, Soft closing hinges of Blum/Hettich and Soft Close Quadro Slides as per requirement (of approved make) with S.S screws etc complete. Hanger rods, handles and locks Hettich make etc complete as per approved drawings.	23,000.00	3,68,00,000.00
1234	3,850.00	Providing and fixing modular factory made Crockery unit with open able shutter/glass shutter and sufficient number of drawer of 18mm thick as per approved drawing of High Moisture Resistant High Density Fibre (HMR HDF) Board of approved brand material having back panel of 8 mm thick High Moisture Resistant High Density Fibre Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter and drawer front shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane/glass of approved quality, Soft closing hinges of Blum/Hettich and Soft Close Quadro Slides as per requirement (of approved make) with S.S screws etc complete. Hanger rods, handles and locks Hettich make etc complete as per approved drawings.	23,000.00	8,85,50,000.00
1235	414.00	Providing and fixing soft closing bottle pull out of Hettich/Hafele or equivalent make of size 300 mm of SS 304 Grade and Telescopic Slides of Hettich/Hafele/or equivalent make with requirement SS screws for fixing above component of Hettich/Hafele or equivalent make, complete as per drawing in existing space, sample prepared in sample flat at site and as per direction of Engineer-in-charge.	7,800.00	32,29,200.00
1236	414.00	Providing and fixing soft closing bottle pull out of Hettich/Hafele or equivalent make of size 200 mm of SS 304 Grade and Telescopic Slides of Hettich/Hafele/or equivalent make with requirement SS screws for fixing above component of Hettich/Hafele or equivalent make, complete as per drawing in existing space, sample prepared in sample flat at site and as per direction of Engineer-in-charge.	5,600.00	23,18,400.00
1237	1,656.00	Providing and fixing drawers for pot and pan storage with full extension soft closing innotech series of Hettich/Hafele/Grass/Blum and fittings with required S.S. Screw for fixing above component of Hettich/Hafele/Grass/Blum as per drawing in existing space, sample prepared in sample flat at site and direction of Engineer-in-charge.	4,300.00	71,20,800.00
1238	1,656.00	Providing and fixing Kitchen medium drawers for utensils / Pulses storage with full extension soft closing innotech series of Hettich/HAFELE/Grass/Blum and fittings with required S.S. Screw for fixing above component of Hettich/Hafele/Grass/Blum as per drawing in existing space, sample prepared in sample flat at site and direction of Engineer-in-charge.	6,300.00	1,04,32,800.00
1239	1,242.00	Providing and fixing Kitchen large heavy drawers for grains storage with full extension soft closing innotech series of Hettich/HAFELE/Grass/Blum and fittings with required S.S. Screw for fixing above component of Hettich/Hafele/Grass/Blum as per drawing in existing space, sample prepared in sample flat at site and direction of Engineer-in-charge.	7,200.00	89,42,400.00
1240	414.00	Providing and fixing Dish Drainer of (Grass/Blum/Hettich/Hafele) or equivalent make and fittings with required S.S. screw for fixing above component of (Grass/Blum/Hettich/Hafele) or equivalent make, complete as per drawing in existing space, sample prepared in sample flat at site and as per direction of Engineer-in-charge.	3,600.00	14,90,400.00
1241	828.00	Providing and fixing PVC Cutlery Tray & SS 304 gas cylinder trolley in kitchen , complete as per drawing in existing space, sample prepared in sample flat at site and as per direction of Engineer-in-charge.	3,400.00	28,15,200.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1242	994.00	Providing and fixing modular factory made Shoe Rack unit with open able shutter/Louvered shutter and sufficient number of drawer of 18mm thick as per approved drawing of High Moisture Resistant High Density Fibre (HMR HDF) Board of approved brand material having back panel of 8 mm thick High Moisture Resistant High Density Fibre Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter and drawer front shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane/glass of approved quality, Soft closing hinges of Blum/Hettich and Soft Close Quadro Slides as per requirement (of approved make) with S.S screws etc complete. Hanger rods, handles and locks Hettich make etc complete as per approved drawings.	21,500.00	2,13,70,999.00
1243	466.08	Providing and fixing modular factory made Puja unit with open able shutter/Louvered shutter and with Granite Top and sufficient number of drawer of 18mm thick with as per approved drawing of High Moisture Resistant High Density Fibre (HMR HDF) Board of approved brand material having back panel of 8 mm thick High Moisture Resistant High Density Fibre Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter and drawer front shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane/glass of approved quality, Soft closing hinges of Blum/Hettich and Soft Close Quadro Slides as per requirement (of approved make) with S.S screws etc complete. Hanger rods, handles and locks Hettich make etc complete as per approved drawings.	21,500.00	1,00,20,720.00
1244	391.00	Providing and fixing modular factory made Vanity Unit with open able shutter/Louvered shutter and sufficient number of drawer of 18mm thick as per approved drawing of High Moisture Resistant High Density Fibre (HMR HDF) Board of approved brand material having back panel of 8 mm thick High Moisture Resistant High Density Fibre Board material with Pre laminated on both sides and 0.8mm thick PVC edge banding with factory drilled KD fittings, dowels . The shutter and drawer front shall be of 18mm thick High Moisture Resistant High Density Fibre Board material finished with High Gloss PVC membrane/glass of approved quality, Soft closing hinges of Blum/Hettich and Soft Close Quadro Slides as per requirement (of approved make) with S.S screws etc complete. Hanger rods, handles and locks Hettich make etc complete as per approved drawings.	21,300.00	83,28,300.00
1245	2,583.00	Providing and fixing 10mm thick toughened glass partitions (shower partion) with Sliding Door with necessary fittings including complete item of work as directied.	5,465.00	1,41,16,094.00
1246	246.81	Steel Grey Granite (40mm thk) Shotblasted- Providing and fixing Stone as specified in drawings for paving of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope, set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, Polymer based joint filler grouts (Laticrete , saint gobain grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	4,100.00	10,11,921.00
1247	1,345.62	Cera Grey Granite (40mm thk) Shotblasted- Providing and fixing Stone as specified in drawings for paving of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope, set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, Polymer based joint filler grouts (Laticrete , saint gobain grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	4,100.00	55,17,042.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1248	304.29	Coral Brown Granite (40mm thk) Shotblasted - Providing and fixing Stone as specified in drawings for paving of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope, set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, Polymer based joint filler grouts (Laticrete , saint gobain grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	4,000.00	12,17,160.00
1249	200.28	Srikakulam Granite (40mm thk) Shotblasted- Providing and fixing Stone as specified in drawings for paving of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope, set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, Polymer based joint filler grouts (Laticrete , saint gobain grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	3,650.00	7,31,022.00
1250	518.15	Coral Brown Granite (40mm thk) Sandblasted-Providing and fixing Stone of mentioned thickness, in Coping/Cladding of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope,set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc - Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	4,100.00	21,24,415.00
1251	1,059.60	Coral Brown Granite (20mm thk) Shotblasted - Providing and fixing Stone of mentioned thickness, in Coping/Cladding of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope,set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc - Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	3,600.00	38,14,560.00
1252	56.61	Srikakulam Granite (40mm thk) Shotblasted- Providing and fixing Stone of mentioned thickness, in Coping/Cladding of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope,set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc - Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	3,600.00	2,03,796.00
1253	12.15	Steel Grey Granite (20mm thk) Polished - Providing and fixing Stone of mentioned thickness, in Coping/Cladding of approved quality, color and uniform shade, with 5 mm wide grooves and to required slope,set on 20mm thick cement mortar 1:4, including fixing of granite stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc -Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	3,600.00	43,740.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1254	152.67	Coral Brown Granite (40mm thk) Polished-Providing and fixing Stone as per mentioned colour in Seater Coping / cladding of approved quality, color and uniform shade, with paper thin joint and to required slope, set on 20mm thick cement mortar 1:4, including fixing of stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc -Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	4,150.00	6,33,581.00
1255	155.87	Coral Brown Granite (20mm thk) Polished - Providing and fixing Stone as per mentioned colour in Seater Coping / cladding of approved quality, color and uniform shade, with paper thin joint and to required slope, set on 20mm thick cement mortar 1:4, including fixing of stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc -Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	3,500.00	5,45,549.00
1256	229.68	Srikakulam Granite (20mm thk) Shotblasted- Providing and fixing Stone as per mentioned colour in Seater Coping / cladding of approved quality, color and uniform shade, with paper thin joint and to required slope, set on 20mm thick cement mortar 1:4, including fixing of stone with cement paste and pointing the joints with approved quality and colour pigmented, cement based joint filler grouts (Fosroc -Nitotile grout or equivalent) to match the shade of granite stone, etc., The rate shall include for cost of providing and laying patterns, borders, inlays, cost of materials, wastages, labour, tools & plants, loading and unloading charges, transportation , curing, cleaning, all other incidental charges, etc ., complete with all leads and lifts as per specifications and drawings at the following levels and as per the instructions of Engineer in Charge.	3,500.00	8,03,880.00
1257	51.00	Supply, Transportation and fixing of 40W LED Post top lantern made with cast Aluminum with decorative opal polycarbonate diffuser with IP 65 protection etc., complete with all accessories with not less than two years warranty. Makes: Philips/Wipro/Havells/Crompton/Bajaj/Jaquar/K-lite/Reytek	9,324.00	4,75,524.00
1258	51.00	Supply and transportation of 4.00 Mtrs height, Bottom dia 143mm, Top 76mm, AV thickness 6mm and to withstand maximum wind velocity 180Km/Hr glass reinforced polymer (GRP) composite type Conical pole with single arm bracket of length 1Mtr and internal junction box including labour charges etc., complete.Makes:Bajaj / Kemrock / Valmont/Sumip/Helipole/K-lite/Reytek	14,443.00	7,36,593.00
1259	51.00	Supply, transportation and fixing of base bracket suitable For 4.00 Mtrs Pole glass reinforced polymer (GRP) composite type pole including labour charges etc., complete.Makes:Bajaj / Kemrock / Valmont/Sumip/Helipole/K-lite/Reytek	2,072.00	1,05,672.00
1260	675.00	Supply, installation, testing and commissioning of 10W Garden Step Light. IP65 Water Resistant and Adjustable Garden Spike Light, 230V AC supply, CCT-3000K.Makes: Philips/Wipro/Havells/Crompton/Bajaj/Jaquar/K-lite/Reytek	1,950.00	13,16,250.00
1261	138.00	Supply, installation, testing and commissioning of 12W Garden Spike Light. IP66 Water Resistant and Adjustable Garden Spike Light, 230V AC supply, CCT-3000K, Semi flush mount type, Fluoroscent/LED type light source.Makes: Philips/Wipro/Havells/Crompton/Bajaj/Jaquar/K-lite/Reytek	2,200.00	3,03,600.00
1262	60.00	Supply and Fixing of LED profile strip energy efficient, corded electric, plastic material, CCT-3000K, 5mtrs length with 12V DC, 5A, 60W driver and required accesoories etc complete.Makes: Philips/Wipro/Havells/Crompton/Bajaj/Jaquar/K-lite/Reytek	2,200.00	1,32,000.00
1263	54.00	Ceiling bracket down lighter -Supply, and delivery of Surface Mounted 1'x1' luminaire,16/20W LED ,with integrated driver,options of White and grey housing,CRI>70 with rating IP 20, operating voltage range of 140-270V, System power factor >0.9, efficiency 85%, THD <10%, Colour temeprature-6500k etc complete.Make:PhilipsWipro/Havells/Crompton/Jaquar/K-Lite/Reytek	2,100.00	1,13,400.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1264	6.00	Fabrication, Transportation and supply of hot-dip galvanized Octagonal Pole with BSEN - 10025 grade S 355 JO steel plate for shaft, IS 2062 for base plate with door opening arrangement, including the supply of suitable boards with bakelite sheet and MCB's as per IS specification suitable to withstand the wind speed of 180KMPH for 9 Mtrs mounting height Pole having dimensions bottom 185 mm,. Top 70mm with 3mm thick, base plate 275 x 275 x 20mm and 4 Nos of M24 x 1000 long 'J' bolts along with templates. Including Supply of 1.5M Dragon type decorative galvanized Single arm with PU Painted bracket. Makes: As per list of recommended brands. Makes: Bajaj/Valmont/Laasma /Transrail/Utkarsh/ Skipper/Consoul/Surya/Vakrangee/Lysaght Pole/K-lite/Reytek.	30,490.00	1,82,940.00
1265	6.00	Foundation and erection charges with special T&P, for 9.00Mtrs / 10Mtrs long Octagonal / Conical pole duly erecting on base plate duly providing 4 Nos foundation bolts with nuts with providing of 0.60Mtr x 0.60Mtrs x 1.40 Mtr size M20 cc work vibrated concreting mixing with necessary steel (15kgs) reinforcement and curing for 7 days as directed by the field engineers during execution including excavation of Earth/BT all labour charges and cost and conveyance of materials etc., complete.	8,909.00	53,454.00
1266	6.00	Supply and transportation of 400W LED Flood light Luminaire made of pressure diecast aluminum housing with powder coated, having protective toughened glass, supply Input voltage 120 - 270 V AC, P.F > 0.90, high power LEDs, with a System Efficacy >=120 lumens/watt and junction temperature < 70°C, with ingress protection IP66, Luminaire performance complies to IS 10322 (Part 5 / Sec-3), IK05, driver surge protection 4KV, In-house additional surge protection = 10KV with wide/ narrow beam optics, THD<10% at 110 Volts AC, driver efficiency >90%, , CCT: 3000K - 5700K, minimum CRI>70, etc., complete with earth connection and not less than two years warranty.Makes: Philips/Wipro/Havells/Crompton/Bajaj/Jaquar/K-lite/Reytek	26,816.00	1,60,896.00
1267	39.00	Supply and fixing of All weather IP67 In Ground 5w -Water Fountain light, with SPD up to 2 KV, LED hilder type, Average Lumen output 250 lm,.Makes: Philips/Wipro/Havells/Crompton/Bajaj/Jaquar/K-lite/Reytek	2,800.00	1,09,200.00
1268	930.00	PVC pipe 75mm-6 kg/cm² Pipes Work: Supply, laying & commissioning in position PVC pipe conforming to IS:4985:2000 and suitable for the respective working pressures without all fittings and accessories e.g. couplings, tees, bends, reducers, screwed adapters, flanged tail pieces etc. jointing as per manufacturers' instruction Finolex/Supreme or Equivalent. Finolex/Supreme or Equivalent	265.00	2,46,450.00
1269	660.00	PVC pipe 63mm-6 kg/cm² Pipes Work: Supply, laying & commissioning in position PVC pipe conforming to IS:4985:2000 and suitable for the respective working pressures without all fittings and accessories e.g. couplings, tees, bends, reducers, screwed adapters, flanged tail pieces etc. jointing as per manufacturers' instruction Finolex/Supreme or Equivalent	145.00	95,700.00
1270	1,471.45	PVC pipe 50mm-6 kg/cm² Pipes Work: Supply, laying & commissioning in position PVC pipe conforming to IS:4985:2000 and suitable for the respective working pressures without all fittings and accessories e.g. couplings, tees, bends, reducers, screwed adapters, flanged tail pieces etc. jointing as per manufacturers' instruction. Finolex/Supreme or Equivalent	95.00	1,39,788.00
1271	1,620.00	PVC pipe 40mm-6 kg/cm² Pipes Work: Supply, laying & commissioning in position PVC pipe conforming to IS:4985:2000 and suitable for the respective working pressures without all fittings and accessories e.g. couplings, tees, bends, reducers, screwed adapters, flanged tail pieces etc. jointing as per manufacturers' instruction. Finolex/Supreme or Equivalent	90.00	1,45,800.00
1272	1.00	PVC fittings Finolex/Supreme or Equivalent	1,88,280.00	1,88,280.00
1273	3,510.00	Earth work excavation and refilling 300x450mm	90.00	3,15,900.00
1274	30.00	Supply,Fixing & commissioning of 10mm Anchor fasteners, 10mm Threaded Rod, Universal Clamp, Channel, Threaded U Clamp, for below podium work. ISI Certified	375.00	11,250.00
1275	30.00	Supply,Fixing & commissioning of MS Bracket fabricated from L-Angle with Anchor Bolts as wall/floor clamping ISI Certified	520.00	15,600.00
1276	10,800.00	Supply,Fixing & commissioning of flexible,kink resistant 16mm inline tubing with pressure compensating, self flushing mechanism , Flat emitter and resistance to UV damage, algae growth brown in colour, Longer lateral run lengh with flow rate 3.5 lph, pressure rating 0.58 to 4.1 bar wall thickness 1.2mm XFD. RAINBIRD XFD or Equivalent	45.00	4,86,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1277	18.00	Supply,Fixing & commissioning of 2" Large Capacity Y Filters for submain filteration Have High Flow & Low Maintenance With a Solid Build,Maximum Flow Up to 110 gpm (25m³/hr), Maximum Pressure 116 psi (8 bar),Maximum Temperature Up to 140ºF (60ºC). LCRBY200D. RAINBIRD or Equivalent	2,500.00	45,000.00
1278	18.00	Supply,Fixing & commissioning of 63mm dia self-closing flushing valves that are installed at the end of the irrigation line for effecting flushing of the line at the beginning of every irrigation cycle, thus avoiding the clogging of the emitters /sprinklers through removal of particles, sediments and other impurities from the water. NETAFIM/AQVASTAR or Equivalent	300.00	5,400.00
1279	1,800.00	Supply,Fixing & commissioning of 12- Gauge Galvanized Steal Rod Comes Pre -Bent to Staple Distribution Tubing , XF Drip Line or XBS Tubing to Finished Grade. Notched Sides. Corrosion -Resistant of TIE DOWN STAKE TDSO50BEND / RAINBIRD or Equivalent	18.00	32,400.00
1280	750.00	Supply,Fixing & commissioning of Gromatetake off Connects XF Series Drip Line and Blank Tubing to PVC Mainlines at Low Pressures. 17mm GTO. RAINBIRD/ ISI or Equivalent	20.00	15,000.00
1281	600.00	Supply,Fixing & commissioning of High Quality Barbs Grab Tubing for a Secure Fit. Unique Barb Design to Reduce Insertion Force. Non - Obtrusive Brown Colored Fittings of 17mm BARBX BARB TEE. RAINBIRD/ XFF -TEE or Equivalent	45.00	27,000.00
1282	750.00	Supply,Fixing & commissioning of High Quality Barbs Grab Tubing for a Secure Fit. Unique Barb Design to Reduce Insertion Force. Non - Obtrusive Brown Colored Fittings of 17mm BARBX BARB COUPLING RAINBIRD/XFF-COUP or Equivalent	25.00	18,750.00
1283	600.00	Supply,Fixing & commissioning of High Quality Barbs Grab Tubing for a Secure Fit. Unique Barb Design to Reduce Insertion Force. Non - Obtrusive Brown Colored Fittings of 17mm BARBX BARB ELBOW. RAINBIRD/XFF-ELBOW or Equivalent	21.00	12,600.00
1284	75.00	Supply,Fixing & commissioning of High Quality Barbs Grab Tubing for a Secure Fit. Unique Barb Design to Reduce Insertion Force. Non - Obtrusive Brown Colored Fittings of 17mm BARBX 1/2" MPT ADAPT.RAINBIRD/XFF-MA050 or Equivalent	32.00	2,400.00
1285	45.00	Supply,Fixing & commissioning of High Quality Barbs Grab Tubing for a Secure Fit. Unique Barb Design to Reduce Insertion Force. Non - Obtrusive Brown Colored Fittings of 17mm BARBX 3/4" MPT ADAPT RAINBIRD/XFF-MA075 or Equivalent	36.00	1,620.00
1286	1,350.00	Supply,Fixing & commissioning of 17mm End cap S Type for dripline closure at the end of the dripline. RAINBIRD/ISI or Equivalent	14.00	18,900.00
1287	645.00	Supply,Fixing & commissioning of Pop up spray head1804 Series Spray bodies, with Rotary nozzle having mutilple stream MPR sprayhaving Co-moulded wiper seal is molded into the cap and features an encased plastic 'cage' to provide unmatched resitence to grit, nozzle capable of covering 4.0-7.3m at 1.4 - 3.8 Bars pressure, and the enviroment. Rotary nozzles shall have hand adjustable (without tools) radius and arc-45 to 270 degree or full circle,True flushing mechanism,Thick streams and large water droplet & Low precipitation rate Additionally, the pressure-activated, multi-function seal design assures a positive seal without excess'flow-by'which enables more heads to be installed on the same valve, Two-piece ratchet mechanism, Features is Precision controlled flush at pop-down clears debris from unit, Construction of time-proven UV_resitant plastic.Pop spray body shall with stand upto 4.8 bar. 1804 R1724. RAINBIRD/1804 R1724	750.00	4,83,750.00
1288	645.00	Supply,Fixing & commissioning of 1/2" Pop up Connecting Swing joint Assembly. The tubing shall be made of polyetylene having wall thickness of 2.3mm ,a working pressure of 5.5 kg/cm2 at 43oC and a surge pressure of 16.6 kg/cm2. Flex pipe textured for wet conditions.The fittings shall be made of UV resistant thermo plastic.SA Series. RAINBIRD /SA	500.00	3,22,500.00
1289	645.00	Supply,Fixing & commissioning of Imported HDPE service saddle of varying size upto 63mm dia with pressure rating of PN 10.	260.00	1,67,700.00
1290	33.00	Supply,Fixing & commissioning of PVC Single Union Ball Valve,security pivot to maintain lever in space,double water tight joint,direct injection stem,Stem O-Ring, non mechanical ,ball Seals with backing seals and with a base which permits maximum penetration into the valve of size 63mm with pressure rating PN 10. PIMTAS/VARIOS	1,400.00	46,200.00
1291	3.00	Supply,Fixing & commissioning of PVC Single Union Ball Valve,security pivot to maintain lever in space,double water tight joint,direct injection stem,Stem O-Ring, non mechanical ,ball Seals with backing seals and with a base which permits maximum penetration into the valve of size 40mm. with pressure rating PN 10. PIMTAS/VARIOS	899.00	2,697.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1292	18.00	Supply,Fixing & commissioning of a double acting air and vaccum release 1/2 " Air release valve . The Air release valve shall be capable of both releasing and admitting air from and into the line. The working pressure shall be 5 bar. RAIN BIRD/AQVASTAR	750.00	13,500.00
1293	9.00	Supply of a double acting air and vaccum release 2 " Air release valve . The Air release valve shall be capable of both releasing and admitting air from and into the line. The working pressure shall be 10 KSC . RAIN BIRD/HT	1,250.00	11,250.00
1294	51.00	Supply,Fixing & commissioning of 6"Round box with greenlid and corrugated structure with unique shovel access slot and bolt hole knockout & Having Dimensions @ Top Opening :6 1/8" Dia & Bottom Opening 8 5/8" Dia. RAINBIRD/PVB/VB	450.00	22,950.00
1295	18.00	Supply,Fixing & commissioning of 10" Round Valve Box with greenlid and corrugated structure with unique shovel access slot and bolt hole knockout & Having Dimensions @ Top Opening 10" Dia & Bottom Opening 12 13/16" Dia. RAINBIRD/PVB/VB	1,300.00	23,400.00
1296	24.00	Supply,Fixing & commissioning of 12" Rectangular Standard Valve Box with greenlid and corrugated structure with unique shovel access slot and bolt hole knockout & having Dimensions @ Top Opening:18 1/4" L X 13" W & bottom opening :21 1/4" L X 15 15/16"W X 12" H RAINBIRD/PVB/VB	2,200.00	52,800.00
1297	18.00	Supply,Fixing & commissioning of 18" Jumbo Rectangular Standard Valve Box with greenlid and corrugated structure with unique shovel access slot and bolt hole knockout & having Dimensions @ Top Opening:18 1/4" L X 13" W & bottom opening :21 1/4" L X 15 15/16"W X 12" H RAINBIRD/VB	3,300.00	59,400.00
1298	24.00	Supply,Fixing & commissioning of 3/4th Quick coupling valve made up of solid brass with locking cover corrosion resistant and stainless steel spring . RAINBIRD/3RC	3,900.00	93,600.00
1299	6.00	Supply,Fixing & commissioning of 3/4th Key threads into top of QCV to provide water access 33DK	2,600.00	15,600.00
1300	6.00	Supply,Fixing & commissioning of 3/4th Hose Swivel Made up of Solid Brass Swivels up to 360 degrees to allows hose to be pulled in any direction & Also to prevent Hose Damage. SH-0. RAINBIRD/33DK	4,300.00	25,800.00
1301	3.00	Supply,Fixing & commissioning of 2" Disc Filter with capacity 30m3/Hr having an suitable inlet connections , to create a helical effect in the incoming water ,spinning particulate in suspension away from the filtering element and so minimizing cleanings frequency ,3/4" outlet for flushing at bottom of filter & maximum working pressure of 12 Bars AQVASTAR/ARMAS	11,000.00	33,000.00
1302	3.00	Supply,Fixing & commissioning of Monobloc or openwell submercible pumpset of having discharge and head of design flow with pressure gauge, UPVC sch 80 - suction & delivery manifold and mounted on a baseframe with proper supports. TEXMO/KIRLOSKER	56,000.00	1,68,000.00
1303	3.00	Supply,Fixing & commissioning of control panel suitable for pumpset having panel box made of CRCA sheet of 2 mm thickness and fixed alongwith following accessories DOL starter (L&T make),start / stop push buttons (L&T make), Ammeter (AE make), Single phase preventor (Minilec make), Voltmeter (AE make) , Indicating lamps (L & T make), MCB (L & T make), Dry level guard sensor (Minilec make) with control cable, etc. L & T	15,000.00	45,000.00
1304	3.00	Supply,Fixing & commissioning of control Valve, Butterfly Valve in mainline for bypass and flow diversion of approved quality with pressure rating of PN 10. PIMTAS/VARIOS	4,800.00	14,400.00
1305	3.00	Supply,Fixing & commissioning of Non Return Valve to prevent back flow have flap type or spring type with pressure rating of PN 10. PIMTAS/VARIOS	3,900.00	11,700.00
1306	3.00	Supply,Fixing & commissioning of Pressure release valve 2" with pressure setting from 0 to 7 Bar. PIMTAS/ARMAS	19,000.00	57,000.00
1307	1.00	Supervision & Transportation Charges all accessories of Filteration and Pumping Unit	3,49,394.70	3,49,395.00
1308	600.00	Supply,Fixing & Commissioning of Direct burial14 Awg x 2 Maxi cable with PVC insulated UL stndard 493 with impregnated polyethene jacket and soft annealed tin coated copper confirming to ASTM B-33 for two way communication between decoder controller and decoders complete. RAINBIRD/PAIGE	150.00	90,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1309	3.00	Supply,Fixing & Commissioning of decoder control system outdoor rated, UV resistant,wall mount case, to support sensor decoder,turf decoders and line surgeprotectors (LSP) with options of program BACK UP AND RESTORE , cycle +soak,Raindelay,ET managers ,weather station, controlling upto 5 master valve(5water source)with diagnostic feature in wire shorttest ,voltage test at stations,ping test and with option to upgradable to IQ central control including , standard accessories complete RAINBIRD - ESP LXD	75,000.00	2,25,000.00
1310	3.00	Supply,Fixing & commissioning Of IQ NCC network Communication Cartrige shall be enabled to access controller through mobile and tab for full operation of irrigation system and Cloud shall have Global weather feature and pin enabled access for user and dry run to budget available water. RAINBIRD/IQ NCC	75,000.00	2,25,000.00
1311	45.00	Supply,Fixing & Commissioning of Field Decodertor support 1 station ,fully water proof encapsulation,power draw 0.5mA at idle and 18mA at active ,working range 0 deg to 50 degree centigrade as per specifications and with different station capacities as given below Field Decoder 1 station. RAINBIRD - FD101	6,200.00	2,79,000.00
1312	9.00	Supply,Fixing & commisioning of Line Surge Protection device as required with copper grounding rod, clamps, charcoal and all requisite accessories complete. RAINBIRD - LSP1	9,000.00	81,000.00
1313	3.00	Supply,Fixing & commissioning of 1" Solenoid globe angle inlet Valves with fabric reinforced Nitrile diaphram Material and rugged PVC construction ,compatible and slow closing to prevent water hammer,pressure rating upto 10.4 KSC and maximum flow of 40GPM ,max water temp. upto 42degree centigrade, with 24AC solenoid,current rating 0.41A @60Hz,coil resistance 30ohm with provision to attach PRS-Dial PGA Pressure Regulation Optional PRS-D. RAINBIRD/PGA	2,200.00	6,600.00
1314	30.00	Supply,Fixing & commissioning of 2" Solenoid globe angle inlet Valves with fabric reinforced Nitrile diaphram Material and rugged PVC durable glass -filled nylon construction ,compatible with and slow closing to prevent water hammer,pressure rating upto 10.4 KSC and maximum flow of 150GPM ,max water temp. upto 42degree centigrade, with 24AC solenoid,current rating 0.41A @60Hz,coil resistance 30ohm with provision to attach PRS-Dial PGA Pressure Regulation Optional PRS-D. RAINBIRD/PGA	4,900.00	1,47,000.00
1315	3.00	Supply,Fixing & commissioning of 3" Solenoid globe Valves as central shut off valve with fabric reinforced diaphram and rugged PVC construction ,compatible and slow closing to prevent water hammer,pressure rating upto 0,7 to 10 KSC and maximum flow of 10 to 100 m3/h ,max water temp. upto 60°C with 24 VAC - 50 Hz,coil resistance 30ohm with provision to attach PRS-Dial. RAINBIRD/AQVASTAR	22,500.00	67,500.00
1316	42.00	Supply,Fixing & commissioning of PRS-DIAL to Maintain constant outlet pressure between 1.04 to6.9 KSC. RAINBIRD PRS	3,200.00	1,34,400.00
1317	158.00	Supply,Fixing & commissioning of direct bury -on wire connector with strain relief ,UL486 D certified ,with waterproof silicon sealant ,fits wire from 22ga to6 ga as per specifications complete DBRY. RAINBIRD DBRY	140.00	22,120.00
1318	3.00	Supply,Fixing & commissioning of automatic rain shut off device ,latching hinge with multiple rainfall settings 5mm to 20mm UL CUL listed and CE approved complete. RAINBIRD RSD BEX	4,000.00	12,000.00
1319	3.00	Supply,Fixing & commissioning of Pump relay 24 AC PLA relay ,stabilizer 300watts. PSA	6,500.00	19,500.00
1320	1.00	Supervision &Transportation Charges of all Automation Equipments	1,30,912.00	1,30,912.00
1321	745.50	Removal of earth by mechanical transport i.e. loading unloading etc. with all leads and lifts	82.50	61,504.00
1322	1,013.23	Supplying and stacking of good earth at site including royalty and carriage with all leads and lifts (earth measured in stacks will be reduced by 20% for payment)	203.50	2,06,193.00
1323	342.14	Supplying and stacking cow dung at site including royalty and carriage with all leads and lifts (sludge measured in stacks will be reduced by 8% for payment)	154.00	52,689.00
1324	1,000.08	Flooding the ground with water including making kiaries and dismantling the same	16.50	16,501.00
1325	2,191.80	Spreading of sludge, dump manure or/and good earth in required thickness (cost of sludge dump manure or/and good earth to be paid separately)	16.50	36,165.00
1326	4,735.82	Fine dressing the ground	99.00	4,68,846.00
1327	386.17	Digging holes in ordinary soil and refilling the same with the excavated earth mixed with manure or sludge in the ratio of 2:1 by volume (2 parts of stacked volume of earth after reduction by 8%) flooding with water, dressing including removal of rubbish and surplus earth, if any with all leads and lifts (cost of manure sludge or extra good earth if needed to be paid for separately) (a) Holes 90 cm dia and 90 cm deep	165.00	63,718.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1328	174.05	Digging holes in ordinary soil and refilling the same with the excavated earth mixed with manure or sludge in the ratio of 2:1 by volume (2 parts of stacked volume of earth after reduction by 8%) flooding with water, dressing including removal of rubbish and surplus earth, if any with all leads and lifts (cost of manure sludge or extra good earth if needed to be paid for separately) (b) Holes 75 cm dia and 75 cm deep	66.00	11,487.00
1329	376.07	Digging holes in ordinary soil and refilling the same with the excavated earth mixed with manure or sludge in the ratio of 2:1 by volume (2 parts of stacked volume of earth after reduction by 8%) flooding with water, dressing including removal of rubbish and surplus earth, if any with all leads and lifts (cost of manure sludge or extra good earth if needed to be paid for separately) (c) Holes 60 m dia and 90 m deep	44.00	16,547.00
1330	23.00	Bauhinia blakeana - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	4,000.00	92,000.00
1331	19.00	Brassaia actinophylla - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,500.00	28,500.00
1332	37.00	Bucida molineti - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	4,500.00	1,66,500.00
1333	35.00	Cassia fistula - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	2,500.00	87,500.00
1334	43.00	Ceiba pentandra- Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	900.00	38,700.00
1335	31.00	Cordia sebestana - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,750.00	54,250.00
1336	19.00	Conocarpus erectus - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	2,000.00	38,000.00

S.No	Estimate Quantity	Item Detailed Specification Description	Rate (INR) (Upto 2 Decimals)	Amount (INR) (Upto 2 Decimals)
1337	7.00	Delonix regia - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,200.00	8,400.00
1338	68.00	Ficus benjamina - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,200.00	81,600.00
1339	73.00	Lagerstroemia speciosa - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,500.00	1,09,500.00
1340	14.00	Plumeria obtusa - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	3,500.00	49,000.00
1341	90.00	Plumeria acutifolia- Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	3,000.00	2,70,000.00
1342	48.00	Plumeria rubra - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	3,500.00	1,68,000.00
1343	20.00	Saraca asoca - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	2,500.00	50,000.00
1344	15.00	Spathodea campanulata - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,500.00	22,500.00
1345	33.00	Tabebuia impetiginosa - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,600.00	52,800.00

1347	24.00	Chrysalidocarpus lutescens - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	600.00	14,400.00
1348	81.00	Ptychosperma microcarpum - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	6,000.00	4,86,000.00
1349	15.00	Roystonia regia - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	7,200.00	1,08,000.00
1350	7.00	Washingtonia robusta- Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	6,000.00	42,000.00
1351	13.00	Wodyetia bifurcata - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	6,000.00	78,000.00
1352	2.00	Licuala grandis - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	6,000.00	12,000.00
1353	124.00	Bambusa ventricosa - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,000.00	1,24,000.00
1354	77.00	Phyllostachys nigra - Cost of supplying and planting Tree plants and there after maintenance for 180 days.(with replacement guarantee) The height should not be less than 1.2m or mentioning against the name of Tree. These should be supplied in polybag or earthen pot of min. 300mm dia. or as per size of trunk. Cost to include stacking and storing in temporary nursery and then after preparing the mimium planting pit 0.9 x 0.9 x 0.9 m deep or as per requirement with antifungal & anti termite medicine & appropriate manure, the plant to be planted as per site engineers instruction.	1,500.00	1,15,500.00

DPR FOR FLOOD MANAGEMENT FOR AMAVARATI CAPITAL CITY (Volume 1 of 2)

June 2017

DOCUMENT NO. TCE.10244A-CV-155-PJ-01

LIST OF ABBREVIATIONS

ADCL	Amaravati Development Corporation Limited
APCRDA	Andhra Pradesh Capital Region Development Authority
CAPEX	Capital Expenditures
DEM	Digital Elevation Model
FRL	Final Road level / Full Reservoir Level
FSL	Full Supply Level
GIS	Geographical Information System
ID	Irrigation Department
IWAI	Inland Waterway Authority of India
MFL	Maximum Flood Level
MLD	Million liters of water per day.
NW-4	National Waterway 4
OPEX	Operating Expenses
RFP	Request for Proposal
ROI	Return on Investment
TMC	Thousand million cubic feet
WMS	Weather Monitoring Station
LT	Level Transmitter
WQM	Weather Quality Monitor

EXECUTIVE SUMMARY

Blue Consultant, a consortium of Tata Consulting Engineers Limited (TCE) and Arcadis Netherlands B V have been assigned by the Amaravati Development Corporation (ADC), Government of Andhra Pradesh for the preparation of Detailed Project Reports (DPRs) for Flood Management, Urban Waterways and Strengthening of Right Flood banks of River Krishna.

This DPR presents the details of the Flood management for the Capital City of Amravati. Flood management concerns the seasonal flooding of the Kondaveeti Vagu and it's in falling drains. Numerical hydrological modeling shows the flood hazard is at its peak after the construction of the build area of Amaravati. The expected peak flow increased due to the effect of the increased rainfall runoff rate from the paved areas.

The water system within the capital city is designed in such a way that a 1/100 year event, defined as 222 mm precipitation in one day, will not lead to inundations of the new to be build capital city. This however requires substantial dimensions of the canals in width as well as in depth and the necessity of pumping capacity. Canal dimensions as proposed are designed to handle a 1/100 year peak precipitation event under the presumption of sufficient pumping capacity in the eastern part of the city, near Undavalli outlet, i.e., confluence point of Kondaveeti Vagu, Krishna River and Buckingham Canal.

Numerical hydraulic modeling shows the most hazardous situations occur after the realization of the city. The introduction of paved areas, even with the proposed density of around 60% paved and 40% green areas, leads to peak discharges which are larger than the peak discharges in the current situation. This includes a future situation where the discharge upstream of Lam reservoir is redirected into a proposed gravity canal which discharges into Krishna River in the western part of the city at Vykuntapuram.

The protection against flooding from the Kondaveeti Vagu and its in falling drains can be mitigated by a combination of measures, which comprises both gravity drainage (part diversion of flood to Krishna Western Delta canal and part diversion to River Krishna through a flood canal from upper catchment areas connecting Lam-Pedaparimi-Vykuntapuram reservoirs) and pumping at Undavalli outlet. Pumping capacity is needed under all circumstances to lower and maintain the water level in the Kondaveeti Vagu to 14m which reduces the flood hazard. The lowering of HFL to 14m is to ensure gravity flow of storm water including the treated sewage from the adjoining areas of the capital city.

Active water level management for the reservoirs in the capital city is essential. This shall be carried out in combination with emptying of reservoirs and / or reducing water levels when extreme precipitation events are expected which eventually reduces the flood hazard. The preemptive emptying of reservoirs seems in disagreement with the water conservation goals. However as this only is needed to prevent flooding under extreme precipitation events and the amount of water available in such an event is very large, the net effect of preemptive emptying with regard to water conservation goals will be negligible.

All the spatial constraints relative to the waterways earmarked in the Master plan Version 4 have been adhered to. This includes the total allocated water way width and maintaining the necessary flat width of green area on either side of the canals. Optimization of canal size to achieve this has taken place both in terms of cross-sectional areas and the material of lining for the canal based on its use for cargo, commuting and recreational purposes.

The total cost for Flood Management of the Capital city works out to **Rs**. **2162.49 Crore**. Furthermore, it is to be noted that this cost is exclusive of Canal Lining works which is proposed to be taken up two years hence, after assessing the results from the seepage observation wells proposed along the canals.

CHAPTER-1
INTRODUCTION

1.1 BACKGROUND

Government of Andhra Pradesh (GoAP) proposes to establish 'Amaravati', a world class capital city for the newly formed State. The Amaravati capital city is proposed to be located on the right bank of perennial River Krishna in Guntur district of Andhra Pradesh. The capital city development is proposed to be over an area of about 217 km^2. The capital city area is bestowed with rich natural features including hillocks, river islands, abundant water, fertile soil and greenery. While abundance of water is a boon for the capital city, seasonal flooding driven by Kondaveeti Vagu and river Krishna poses a threat to the city. Figure 1.1 presents the location of the proposed capital city. The details of location and Blue Master Plan are presented in drawing no.TCE.10244A-CV-LM-30001, TCE.10244A-CV-LM-30002 and TCE.10244A-CV- MP-30003.

Under the vision of developing a sustainable and green Capital city, the GoAP intends to leverage these natural advantages to the best and deal with the challenges posed. As part of this, the GoAP plans to develop comprehensive network of brown field and green field urban waterways, robust flood management systems and develop its riverfront. Blue Consultant, a consortium of M/s. TATA Consulting Engineers Limited, India and M/s. ARCADIS, Netherlands was entrusted the task of preparing Detailed Project Report (DPR) including preparation of bid documents for the following three tasks for Amaravati capital city:

(i) Flood management system for the capital city
(ii) Development of Urban waterways in Amaravati
(iii) River training works for Krishna river including strengthening of right flood bank

1.2 SCOPE OF WORK

The scope of work as mentioned by the RFP is summarized here for reference purposes:

1. Undertake feasibility study
    a. Flood management measures in the capital by improving Kondaveeti Vagu and its in-falling drains to required standards for safe disposal of flood discharge, and prevent to inundation
    b. Leverage flood management studies to identify locations for developing multi-purpose reservoirs

c. Contribute to plan for road network duly fixing the top levels in consideration of the floods for avoiding inundation or breaches

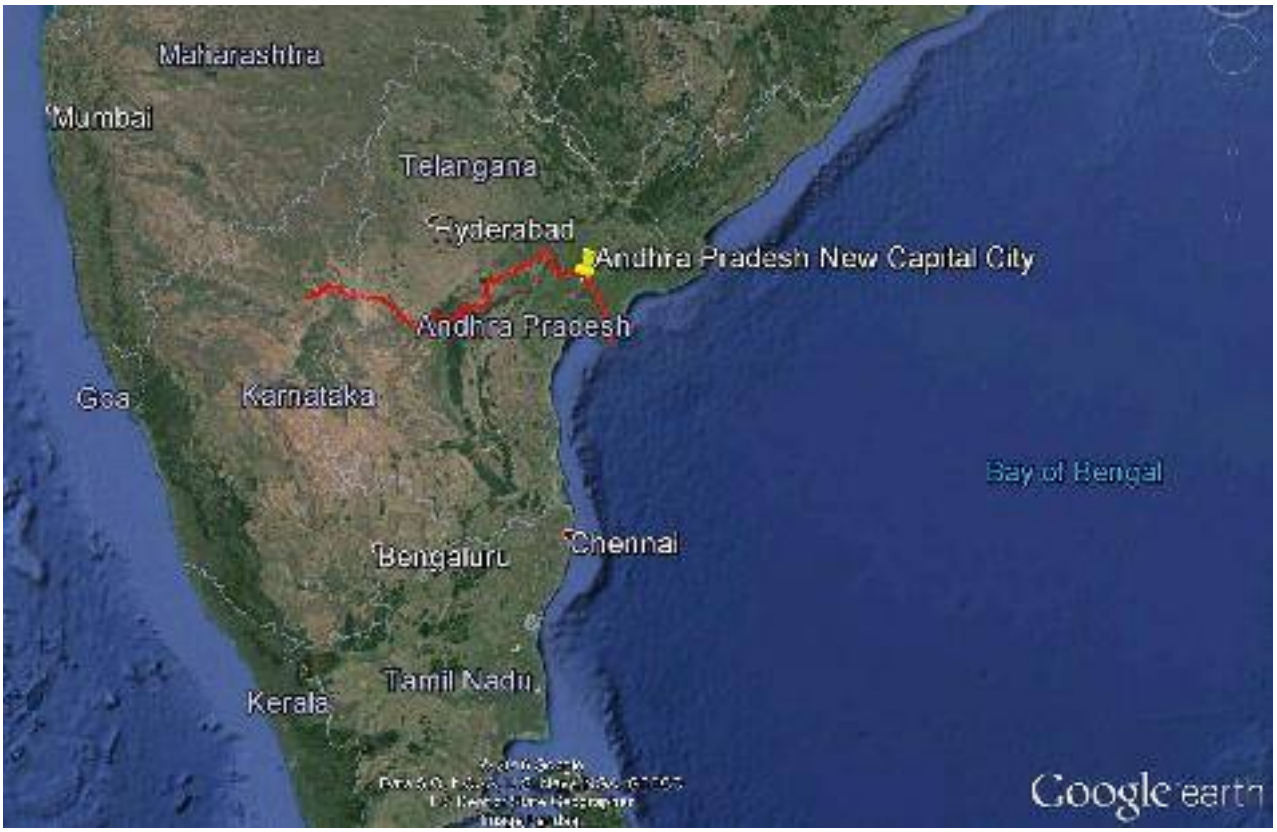

Figure 1.1 Location of Amaravati within Andhra Pradesh with the course of the Krishna River shown in red

2. Concept plan
3. Standards & Design
   a. Reservoir design should include structuring and capacity tables for arriving at gross, net storage and all salient features
   b. CPHEEO manual, BIS standards or applicable British/American standards
   c. System should be durable and easy to implement, operate and maintain

1.3 CHOICES TO BE MADE

The feasibility of having a flood management for the capital city Amaravati holds a number of options or choices. These choices include, but are not limited to, the water level to be maintained in the urban water system, the maximum allowable size of vessels able to enter the urban water system, the geometry of the bund, the height of roads, the use of bunds along the future course of the Kondaveeti Vagu and Pala Vagu, the number of embankment / dis-embarkment sites etc.

Flood management concerns the seasonal flooding of the Kondaveeti Vagu and its in-falling drains. Numerical hydrological modeling shows the flood hazard is at its peak after the

construction of the build area of Amaravati. The expected peak flow increased due to the effect of the increased rainfall runoff rate from the paved areas. Analysis of rainfall shows the normative event for the 1/100 year situation is 222 mm of rain during 24 hours. The hydraulic numerical modeling indicates the normative event for flooding could as well be two consecutive days with a lesser rainfall of approximately 180 mm of rainfall or comparable. To compensate for the uncertainty in translating rainfall events and rainfall statistics we recommend a slightly over dimensioned design of the waterways themselves.

For the present study, the normative conditions are considered to exist after finalizing the construction of the city. As the canals are proposed to be constructed as soon as possible, these canals will seem to be over dimensioned during the build phase.

The management of water levels in the reservoirs determines the absolute height of the water levels during normative conditions. Fully filled reservoirs result in a substantial higher flood level than reservoirs which are emptied in anticipation of a torrential rain event. For the feasibility we assume a normative water level based on flood predictions. Assuming fully filled reservoirs without preemptive emptying of the reservoirs would result in substantial higher road levels and thus a significantly higher CAPEX.

After finalizing the constructions phase of the city the canal system will be slightly over dimensioned as compensation for numerical and statistical uncertainties. This final design will still “fit” within the spatial constraints as given by the master plan. Therefore we deem the management of seasonal flooding feasible.

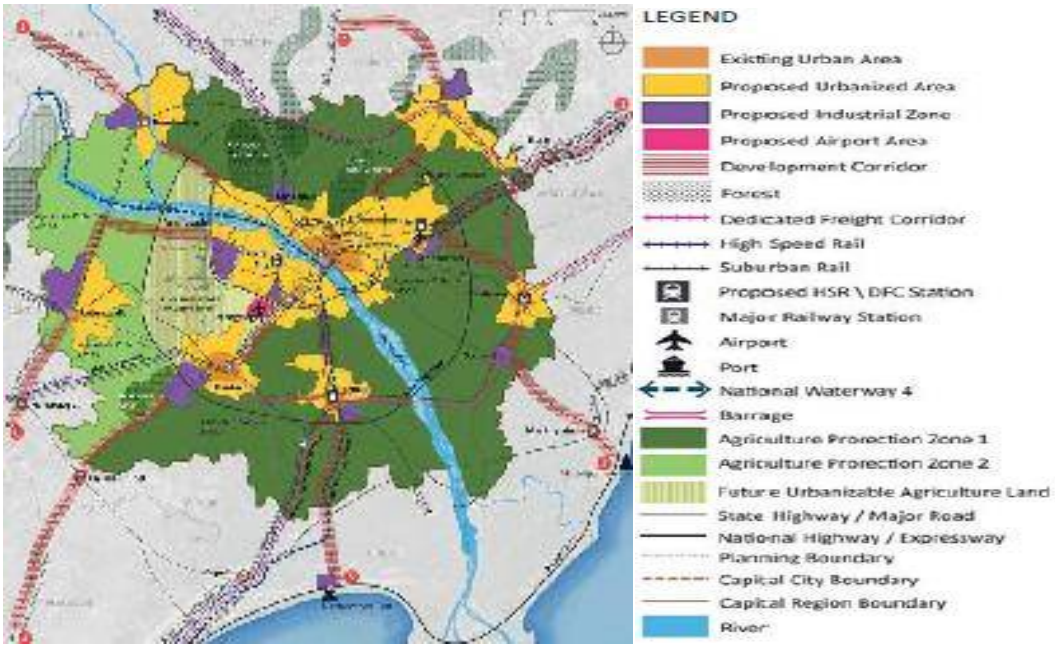

Figure 1.2 Location and Connection to the Capital City (Capital City Master Plan)

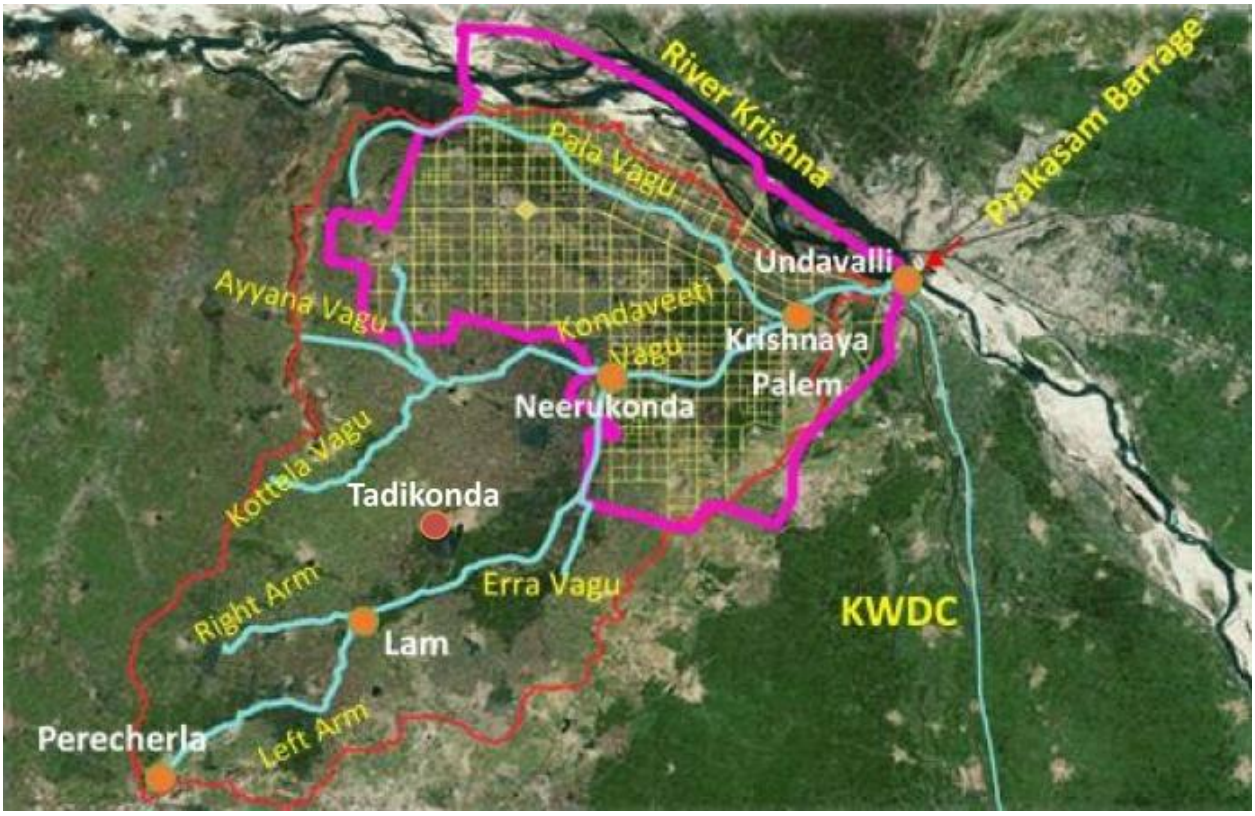

Figure 1.3 Amaravati City Plan in the Kondaveeti Vagu Catchment Area

Figure 1.2 shows the location and connection to the Capital City as per the Master plan. Figure 1.3 presents the Amaravati Capital City Plan inserted in the Kondaveeti Vagu catchment area. Technically all the measures needed for flood protection, stabilization of the right bank and island

in the Krishna River and the creation of a navigable urban water system are feasible. The investigations and studies which underpin this conclusion made it clear the urban water system will be a fairly technical system. The combination of flood protection and navigability requires regulating works such as weirs and ship locks which have to be maintained and operated. This is of course nothing out of the ordinary, but is does require attention from the responsible authorities as the consequences of systems failure will be severe and large parts of the future city can suffer from pluvial rain flooding as well as flooding from the surface water as a result of partial or total system failure.

From a water management point of view the location for Amaravati is not optimal. Under current conditions flooding during the monsoon already occurs. Natural discharge from regional water systems as the Kondaveeti Vagu is hindered by the existing bund and its regulating works as well as the regime of the Prakasam Barrage. Change of land use from agriculture to urban environment increases peak runoff resulting in a faster discharge of pluvial water and subsequent higher water levels downstream. As a result the normative condition, i.e. the conditions determining the maximum flood levels, is determined by the future situation in which the city is fully developed. This also implies that the water system has to be defined according to this fully developed situation.

The spatial restrictions implied by the city design do limit optimization of the water system design. More space for water reservoirs and storage areas has been emphasized in earlier studies. Even with the added room for green areas and water storage areas the need for pumping stations remains. This also has to do with the natural characteristics of the area. The need for permanent pumping capacity is clear and cannot be avoided. The needed capacity can be optimized, this requires the active control of water levels in the reservoirs and a flood early warning system. A conflict of functions occurs as the reservoirs are also designed for water storage / water conservation. By allowing active water level management during the monsoon with restrictions near the end of the monsoon period a functioning system with optimized pumping capacity can be realized. Preliminary optimization has taken place in this feasibility phase and will be fine-tuned during the conceptual and final design phases. The Blue Master Plan

CHAPTER-2
HYDROLOGY

2.1 GENERAL

The modeling of the Kondaveeti Vagu (KV) catchment is a necessity in the process of flood management measurements and urban waterway design. With the hydraulic model water levels in the Kondaveeti Vagu catchment can be predicted in different design scenarios. For the model design conditions are defined as a once in a hundred years precipitation event.

2.2 RAINFALL DATA

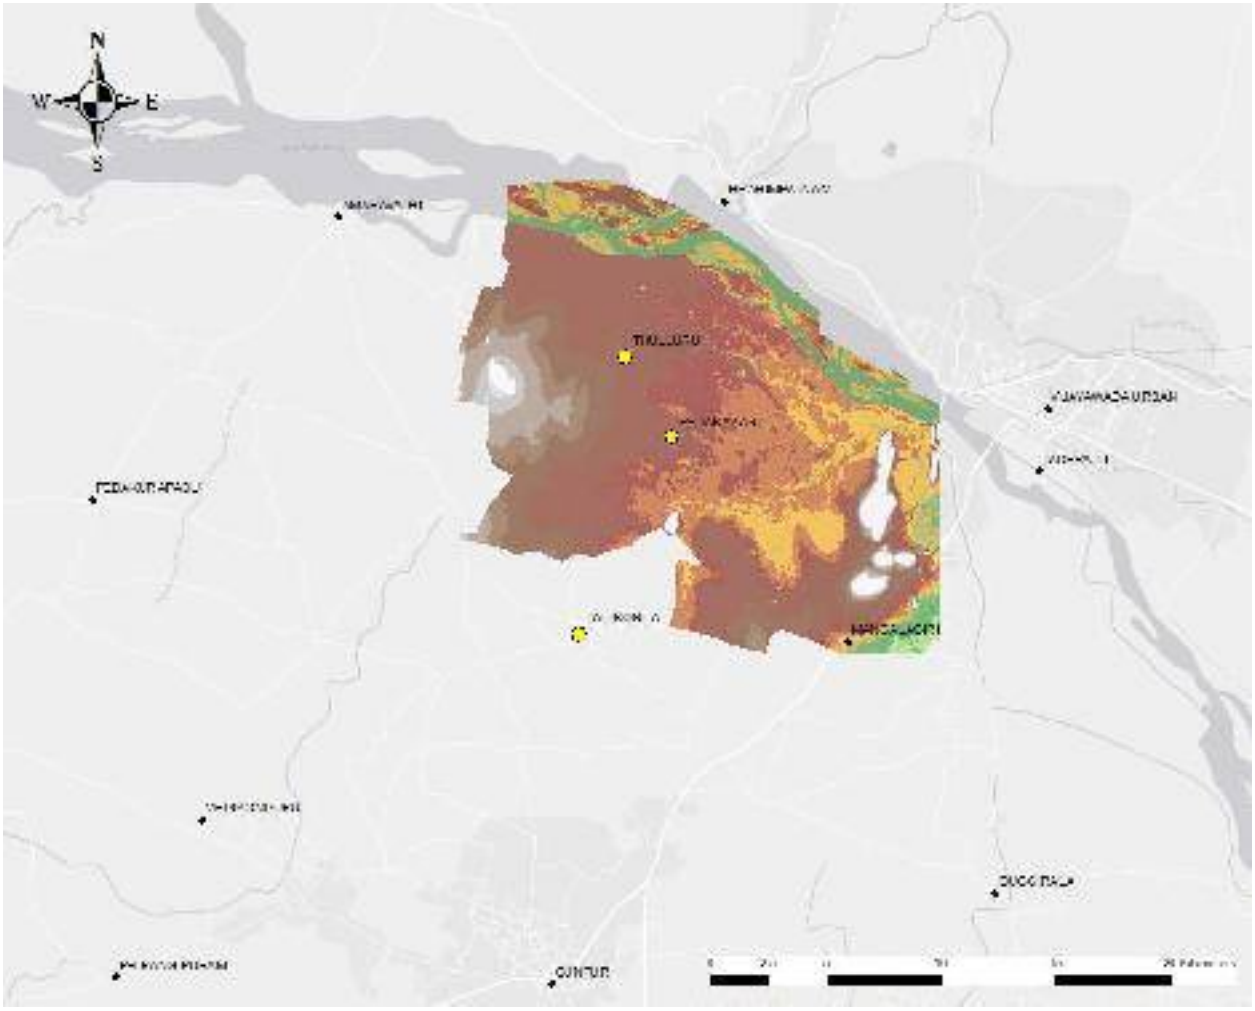

Figure 2.1 Rain gauge Stations in the Kondaveeti Vagu Catchment

Figure 2.1 presents the location of the Rain gauge stations in the Kondaveeti Vagu catchment area. Rainfall data from these stations are examined for consideration in the studies.

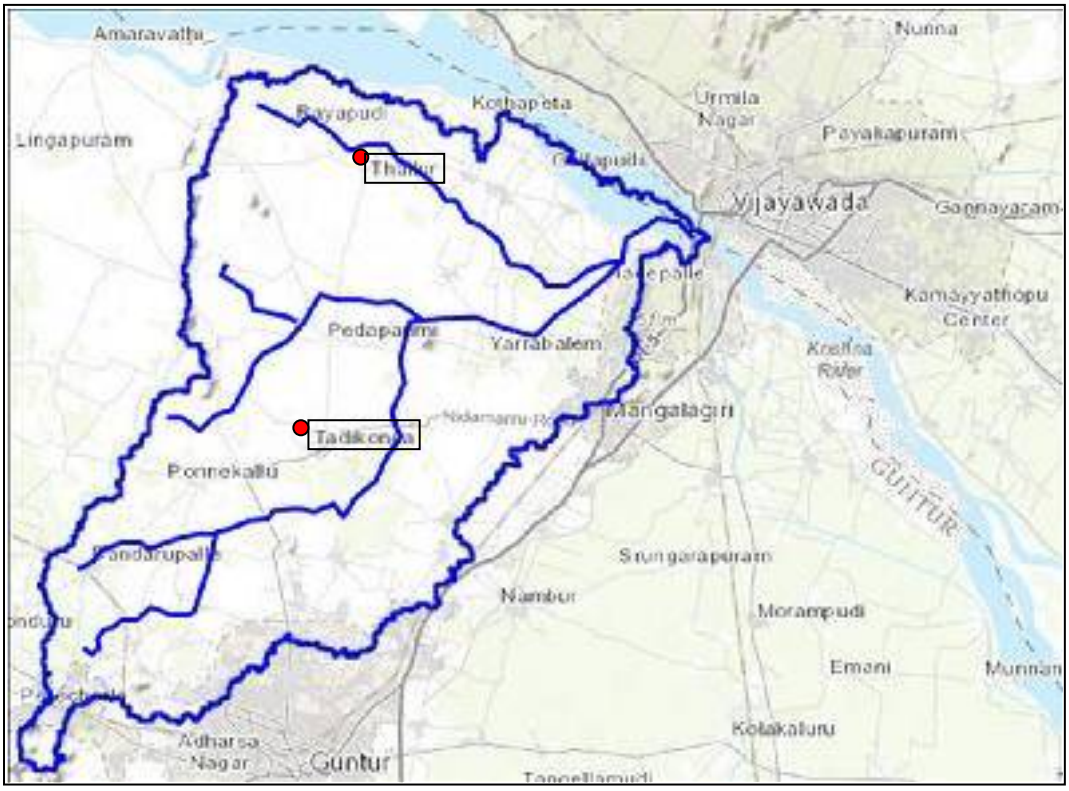

Figure 2.2 Location of influencing Rain gauge Stations in the Kondaveeti Vagu Catchment Area

Figure 2.2 above presents the location of the two Rain gauge stations at Thalluru and Tadikonda within the Kondaveeti catchment area that influences the hydrological characteristics and the runoff from the said catchment.

On a careful review of the available data at these rain gauge stations it is inferred that the following three rain gauge stations at Thulluru, Pedakakani and Tadikonda influence the rainfall characteristics of the catchment area under study and hence 25 years of rainfall data from these are utilized for the calculation of flood flow from the catchment area.

Furthermore, the presence of Mountain ranges, causes s different rainfall pattern and regime on to places like Guntur and Mangalagiri though they are located in the vicinity of the proposed capital city.

2.3 VAILDATION OF THE AVAILABLE RAINFALL DATA

Available rainfall data from the rain gauge stations in the Kondaveeti Vagu catchment is further validated for its authenticity by making a comparison of the same with the available

meteorological data from the Indian Meteorological Department (IMD). Figure 2.3 presents the Isopluvial Map from the IMD dataset for 100 years. On a review of the data it is observed that the daily rainfall intensity lies between 260 and 280mm for the area under consideration.

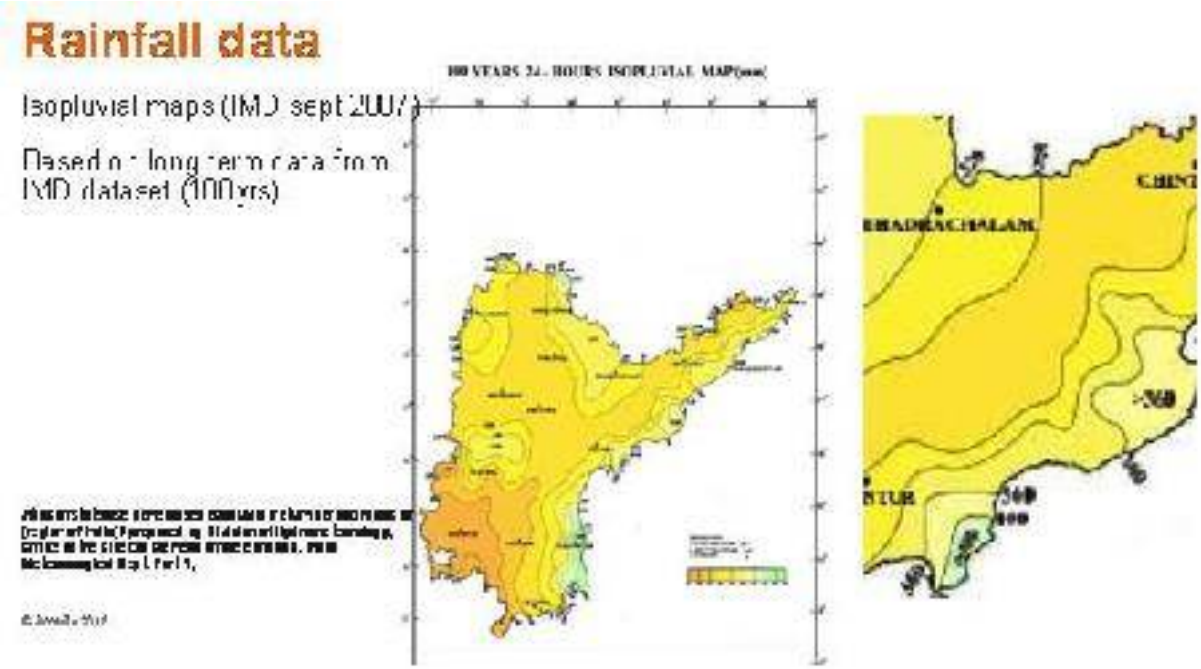

Figure 2.3 Isopluvial Maps (Ref: IMD, Sept 2007)

Figure 2.4 presents the comparison of the rainfall data from the Iso-pluvial maps of IMD corresponding to various Return Periods. As observed, for a Return Period of 100 years considered for the present study, the rainfall data is provided to be less than 280mm. Furthermore, the figure also indicates that the factor to be used for extrapolating the 5 year return period rainfall data to 100 year rainfall data is 1.75.

A comparison of this factor from a hydrologically similar catchment in The Netherlands is made. It is observed that the conversion factor is 1.68 (Refer Figure 2.5). This is therefore comparable with the conversion factor of 1.75 as in Figure 2.4.

Thus the Daily Design Rainfall data to be used for the catchment under study which is 222 mm is well within the available data and return period factor and therefore stands validated.

Figure 2.4 IMD Rainfall Data for various Return Periods

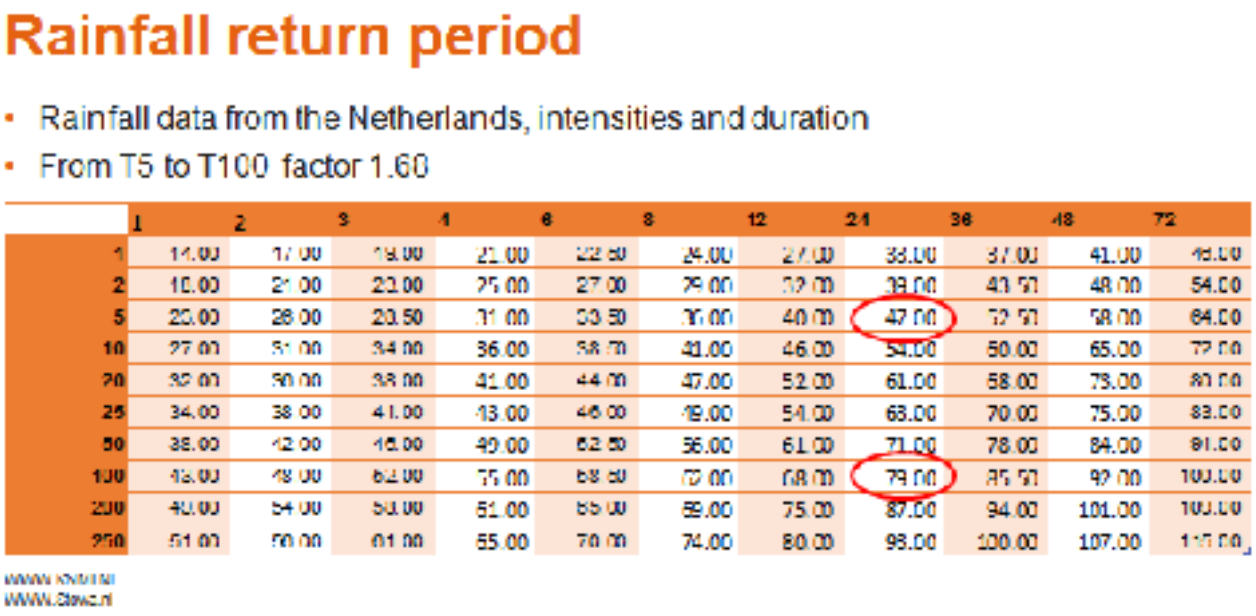

Figure 2.5 Conversion Factor for hydrologically similar catchment in The Netherlands

2.4 CONCLUSIONS

Based on the existing 25 year rainfall data in the Kondaveeti Vagu catchment and the important effective rain gauge data among them and comparison of the factor to be used for extrapolation of the current available 25 year rainfall data to 100 year return period and the subsequent comparison of the conversion factor with a similar hydrological catchment from The Netherlands as detailed in the previous sections, following conclusions can be drawn:

a) A 24h T100 rainfall event does not show intensities over 30mm/hour
b) A 24h T100 rainfall event does have a 90% upper limit of 175 to 180mm based on Gumbell Distribution
c) Raw rainfall data at Guntur results in an isolated rainfall event of 240mm

Considering the above conclusions a rainfall event of 222mm in 24 hours is used for all calculations of flood flow.

2.5 CLARIFICATIONS ON SIMULTANEOUS OCCURRENCE OF FLOODS IN KONDAVEETI VAGU CATCHMENT AND KRISHNA RIVER AT PRAKASAM BARRAGE IN VIJAYAWADA

The flood discharge of Kondaveeti Vagu is entirely dependent on the magnitude of rainfall occurring over the catchment area. Hence, a review of observed rainfall data in the catchment vis-a-visa peak annual flood discharge of Krishna River recorded at Prakasam Barrage, Vijayawada is made considering the recent 25 years period (i.e., 1990-91 to 2014-15).

The observed rainfall data at Thullur and Tadikonda rain gauge stations which represent significantly the catchment and which are located within the catchment of Kondaveeti Vagu (Refer Figure 2.2) is considered for the above stated purpose.

Based on review of historical flood records of Krishna River at Prakasam Barrage at Vijayawada for the recent 25 years period, a maximum flood discharge of 31,447 m^3/s (which corresponds to 100 year peak flood of Krishna River) was observed on 05th October 2009. The corresponding rainfall recorded at Thullur and Tadikonda rain gauge stations on the above date is nil (i.e., 0 mm).

In order to make a realistic assessment of probability of simultaneous occurrence of peak floods in both the river basins, rainfall and flood records of Kondaveeti Vagu catchment and Krishna River are reviewed with the available data for recent 25 years period. The observed peak annual flood of Krishna River for each year along with date of occurrence is extracted from flood records. Further, the corresponding rainfall observed at Thullur and Tadikonda rain gauge stations for the above date is extracted from rainfall data. The summary of above data is shown in Table 2.1.

From Table 2.1, it can be seen that the rainfall in Kondaveeti Vagu catchment is either nil or marginal when there is peak flood in Krishna river for all years, except for 2005-06. During 2005-06, the peak flood observed in Krishna river is about 20,545 m^3/s (which is about 65% of 100

year flood of Krishna river) and the corresponding average rainfall in Kondaveeti Vagu catchment is about 162 mm (which is less than the 100 year rainfall of 222 mm considered in the design).

From the above, it can be concluded that simultaneous occurrence of peak floods in Krishna River and Kondaveeti Vagu catchment (capital city) has a low probability. Since, flood management of capital city is regulated with pumping stations; its relevance is only in design of pumping stations. The pumping station will be designed to cater to the above condition.

Based on points discussed above, it is to be noted that the joint probability of simultaneous occurrence of 100 year peak floods in both river basins and pump/power failure is expected to be low (i.e. return period of occurrence of such a scenario will be greater than 100 years). Hence, the risk associated with power/pump failure during the occurrence of a 100 year flood can be categorized as "**Low Probability High Risk**" event. It would be uneconomical to design the entire flood management system of capital city to cater to such an event. However, to avoid any loss of life or damage to critical infrastructure, risk mitigation measures (preventive and backup) are recommended to be adopted for the capital city.

2.6 OBJECTIVES OF FLOOD MODELLING

With the hydraulic model the following objectives are to be achieved:

- Provide minimal dimensions of an urban waterway system with which a safe disposal of flood discharge is possible;
- Provide minimum road levels for the principal roads which provide free access of the capital during flood discharge;
- Identify the effect of multipurpose reservoirs on flood discharge;
- Provide a navigable connected water system within the City boundaries;
- Provide recommendations to maintain good water quality;
- Provide recommendations for further analysis in flood control measurements and urban drainage design.

2.7 METHODOLOGY

Modeling the Kondaveeti Vagu catchment is done using the SOBEK1 2.14.001 rural package. From this modeling package the Rainfall Runoff (RR) and 1 dimensional flow (1D-FLOW) modules are used to model this catchment. Initially, the current situation is modeled to determine the competence of the model. After a successful reproduction and analysis of the T100 flood

a. [1]https://www.deltares.nl/en/software/sobek/

discharge the model can be adapted to simulate the functioning of the water system in the Amaravati Capital City Master Plan.

SOBEK is a modeling suite developed by Dutch national knowledge institute Deltares, Standard software for all Dutch water authorities and used internationally in many countries.

Designed for:

- flood forecasting,
- optimization of drainage systems,
- control of irrigation systems,
- sewer overflow design,
- river morphology

The modules within the SOBEK modeling suite simulate the complex flows and the water related processes in almost any system. The modules represent phenomena and physical processes in an accurate way in one-dimensional (1D) network systems and on two-dimensional (2D) horizontal grids. It is the ideal tool for guiding the designer in making optimum use of resources.

Figure 2.6 presents the way in which the Kondaveeti Vagu catchment model under study is designed to cater to two basic divisions of the entire catchment (421 sq km) into upper catchment (190 sq km) and lower catchment (231 sq km).

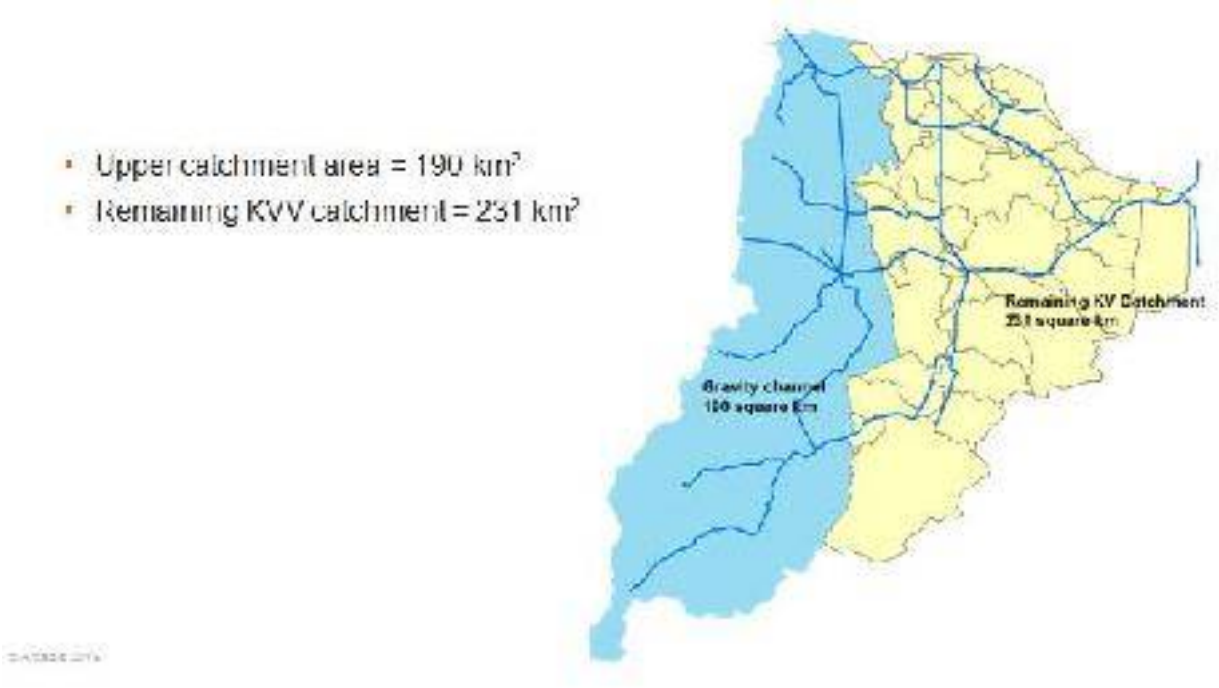

Figure 2.6 Model Design of Kondaveeti Vagu Catchment

Figure 2.7 Model Discretization using SOBEK

Both the upper catchment and the lower catchment of the Kondaveeti Vagu and its in-falling drains is discretized into various elements as indicated in Figure 2.7 above.

2.8 MODEL SETUP

2.8.1 Current Situation

The model is based on the available GIS data. Using the DEM the Kondaveeti Vagu catchment is calculated with ArcGIS software. The Catchment area of Kondaveeti Vagu is about 421 km^2 with elevations between 17m and 30m above mean sea level.

2.8.2 Cross-Sections

The cross-sections of all channels in the current situation are based on the DEM. For all channels, approximately every 500 m. apart, a transverse line 400 m. long is created. All these lines are then converted to points, 10 m. apart. These points are then assigned the elevation of the DEM pixel on which they lay. The center 2 points are lowered 2.0 m. artificially creating a 20 m. wide channel with a bottom level 2 m. below ground level. All cross-sections are imported to

SOBEK (with the tool Turtle2) and checked. Irregular cross-sections are deleted. The model contains 172 cross sections.

2.8.3 Rainfall Runoff

To accurately include the surface runoff of precipitation the Kondaveeti Vagu catchment is divided in sub-catchments. All channels are cut into segments of approximately 2000 m resulting in 61 segments. For each segment a sub-catchment is calculated based on the DEM using the DTM2CAT tool. For each channel segment a point is imported to SOBEK. On this point rainfall runoff flows into the channel from unpaved and paved nodes. For each sub-catchment the area and the mean elevation are calculated. In the current situation 95% of a sub-catchment area is appointed to unpaved nodes and 5% to the paved nodes. The model contains 61 unpaved area nodes and 61 paved area nodes.

Due to land use change from agricultural use to urban area there will be an increased paved surface. To include this change in the model the areas represented by paved and unpaved areas are changed.

Based on the city design the city area is reconnected to the channel. Within city boundaries the paved area is set to 64% and unpaved set to 36%. Default parameters for drainage and subsoil processes are used.

During discussions with urban design consultant the option for reduction of drain discharge to current discharge was mentioned. This will be included in design considerations.

2.8.4 Downstream Boundaries

At the downstream end of the Kondaveeti Vagu, the Undavalli outfall and the Krishna Western Delta Canal are the downstream boundaries of this hydrological model. The water level at the Undavalli outfall can be modified to represent low (17.1 m RL) or high (21 m RL) in the Krishna River just upstream of the Prakasam barrage. In case the water levels are high a pump with capacity of 300 cumecs is used to discharge the water from the Kondaveeti Vagu. Water can also discharge to the Krishna Western Delta Canal which has a water level of 17 m RL. A sluice which represents the escape regulator 3 limits the discharge to 170 m3/s. although a maximum of 85m3/s (115 m3/s in the dry season) was mentioned in a meeting with the client.

[2] http://www.modelwalhalla.nl/cgi-bin/wiki/view/Tools/TurtleRural

[3] Report on Flood modeling & management measures of Kondaveeti Vagu, M/s. Aarvee Associates, May 2016

2.8.5 Meteorological Input

Modeling is done using daily measurements from the stations in KV catchment, stations Thullur and Tadikonda. To simulate a T100 event a rainfall event is created using the data of a wet monsoon combined with the T100 values (212 and 183 mm/day respectively) as defined in the Aarvee3 report.

Further analysis of the effect of rainfall data includes the use of the Gannavaram hourly rainfall data. These are normalized for daily totals to obtain hourly distributed rainfall. Analysis shows that hourly rainfall distribution at T100 reaches a simulated peak intensity of 36mm / hour 3 thus causing minimal differences with daily values.

2.8.6 Calibration

With SOBEK it is possible to include evapotranspiration in the model as daily evaporation values. Also soil processes are used in the modeling process. In order to obtain a valid simulation result the parameters in the model need to be adjusted to match model outcome with measured water levels and volumes.

In the KV catchment no water levels or discharge measurements are available. The only calibration value is a maximum discharge of 460 cumecs at the confluence point of KV with River Krishna.

2.8.7 2-Dimensional Modeling

Since the model of the current situation predicts discharge like there would be no inundations a coupled 1D/2D model was made using a 100 by 100 m grid based on the DEM. The results show large inundated areas and low peak discharge due to the huge amount of water that is stored at surface level.

For the construction of the design model, the Amaravati Master Plan V4 is used. Within city boundaries, the existing channels are removed and the waterways from the master plan are included in the model. The simulated situation is the T100 design flood.

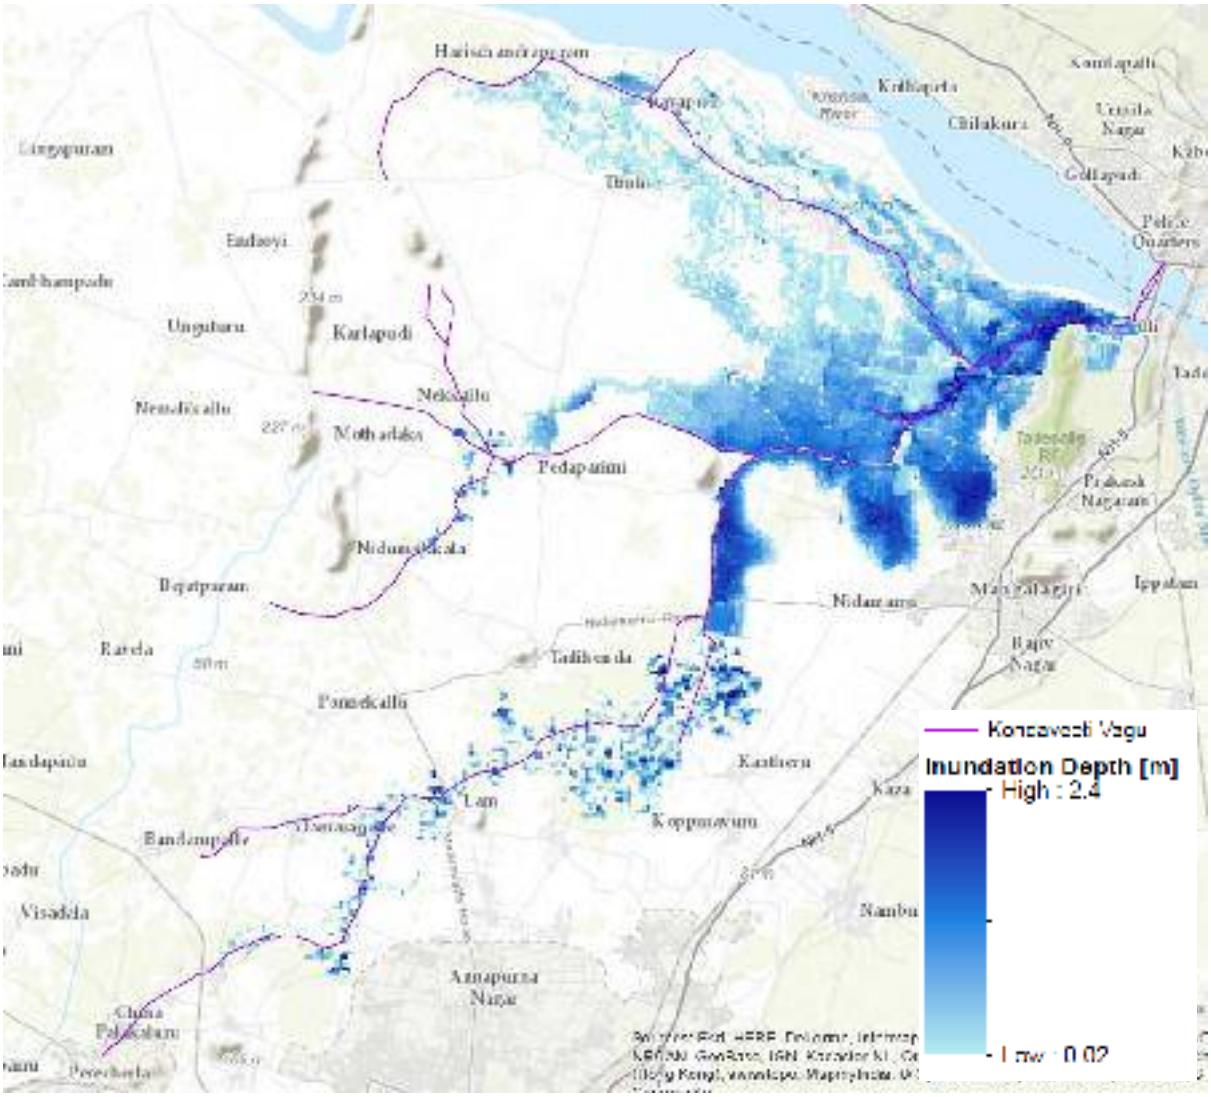

Figure 2.8 shows maximum inundation levels.

2.8.8 Channels

Based on the Master Plan V4 the new water network is imported into the model. Two versions are distinguished, a version in which a diversion of the upstream catchment area is included and a version without bypass.

Cross sections of channels are made based on the discussed profiles during site visits and meeting with client and further optimized for navigation and lowering of T100 flood levels during design.

Navigable channels are defined as waterways with minimal dimensions as per the Indian Standards and Indian Water Authority of India (IWWA). As flood protection dimensions are larger than the minimal navigable dimensions the navigable dimensions are easily met.

2.9 RESULTS OF ANALYSIS

The Results of Analysis using SOBEK software carried out during the Feasibility Study are presented in Appendix-2.

CHAPTER-3
FEASIBILITY STUDY

3.1 DETAILS OF STUDY

A Feasibility Report highlighting the feasibility of disposal of peak floods along with the buffer for green development was submitted to ADC in August 2016. Available choices for having flood discharge from the capital city for a storm equivalent to 1 in 100 year return period was carried out. The Report suggested that the proposed capital city can be technically protected against a flood event of 1 in 100 year storm. This report was submitted in August 2016.

3.2 SCOPE OF WORK

The scope of works for Feasibility Report for Flood Management as per the RFP for the project is as follows:

i) Undertake feasibility study
- Flood management measures in the capital by improving Kondaveeti Vagu and its infalling drains to required standards for safe disposal of flood discharge, and prevent to inundation
- Leverage flood management studies to identify locations for developing multi-purpose reservoirs
- Contribute to plan for road network duly fixing the top levels in consideration of the floods for avoiding inundation or breaches

ii) Concept plan

iii) Standards & Design
- Reservoir design should include structuring and capacity tables for arriving at gross, net storage and all salient features
- CPHEEO manual, BIS standards or applicable British/American standards
- System should be durable and easy to implement, operate and maintain

3.3 FLOOD PROTECTION

The water system can be designed in such a way that a 1/100 year event, defined as 222 mm precipitation in one day, will not lead to inundations of the new to be build capital city. This however requires substantial dimensions of the canals in width as well as in depth and the necessity of pumping capacity.

Numerical hydraulic modeling shows the most hazardous situations occur after the realization of the city. The introduction of paved areas, even with the proposed density of around 60% paved and 40% green areas, leads to peak discharges which are larger than the peak discharges in the current situation. This includes a future situation where the discharge upstream of Lam reservoir is redirected into a new to be build canal which discharges into Krishna River in the western part of the city.

Canal dimensions as proposed are designed to handle a 1/100 year peak precipitation event under the presumption of sufficient pumping capacity in the eastern part of the city, near Undavalli outlet, i.e., confluence point of Kondaveeti Vagu, Krishna River and Buckingham Canal.

The active management of water levels in the reservoirs determines the absolute height of the water levels during normative conditions. Fully filled reservoirs result in a substantial higher flood level than reservoirs which are emptied in anticipation of a torrential rain event. For design purposes we will assume a controlled water level based on flood predictions preliminary optimization has taken place by assuming active water level control in the water reservoir. The numerical model shows a significant reduction in expected water levels during peak discharges if the reservoirs are actively managed.

3.4 OPTIONS FOR FLOOD DISCHARGE

Following Three (3) options of flood discharge from the capital city to River Krishna as identified by the Technical Expert Committee (TEC) appointed by the Government of Andhra Pradesh in discussion with the then appointed Consultant (M/s. Aarvee Associates for flood study prior to the advent of Blue Consultant) were concurred upon by the Blue Consultant as the possibilities for flood discharge from the Capital city. These three options are:

Option-1: Flood Discharge by gravity through a) existing Kondaveeti Vagu and Pala Vagu and their infalling drains from the lower catchment through Neerukonda and Krishnayapalem Reservoirs within the Capital city; b) discharge through proposed gravity canal from Lam Reservoir to Vykuntapuram Reservoir via Pedaparimi Reservoir, all lying outside the capital city Amaravati in the upper catchment; and c) Pumping of excess water from Undavalli to River Krishna in the lower catchment and from Vykuntapuram in the upper catchment.

Option-2: Flood Discharge by gravity through a) existing Kondaveeti Vagu and Pala Vagu and their infalling drains from the lower catchment through Neerukonda and Krishnayapalem Reservoirs within the capital city; b) discharge from Lam Reservoir till

Neerukonda Reservoir and further to River Krishna through the proposed Central Vista Canal passing through the Secretariat Complex catering the upper catchment; and c) Pumping of excess water from Undavalli to River Krishna in the lower catchment and from Vykuntapuram in the upper catchment.

Option-3: Flood Discharge by gravity through a) Kondaveeti and Pala Vagu and its in-falling drains and b) Pumping all the flows from both upper catchment and lower catchment at Undavalli.

It is to be noted that the flood modeling was carried out based on the Digital Elevation Model (DEM) obtained from Amaravati Development Corporation (ADC) and Andhra Pradesh Capital Region Development Authority (APCRDA) and post discussions with various Stake holders apart from various Governmental bodies and Departments that concluded that Option-2 for flood discharge to be the optimum though earlier studies including the TEC recommendation was for Option-1 which delineated the entire catchment into upper and lower catchment and the flood discharge from the upper catchment was through the proposed gravity canal. Including this pumping of flood waters included at two places – one from Undavalli and the other one from Vykuntapuram as against pumping only at Undavalli that was suggested by earlier studies.

The main reasons that were responsible for the changes proposed compared to the earlier studies were as follows:

1. Option-1 was not considered in view of the land acquisitions that would result for three reservoirs Lam, Pedaparimi and Vykuntapuram that lie outside the capital city and were expensive and time consuming.
2. Option-2 involved the flood discharge through the Central Vista in the Secretariat Area that was aesthetically not acceptable.
3. Extra Pumping Station at Vykuntapuram in the western part of the capital city was recommended in view of the river modeling that was carried out indicated water levels of the order of 25m

Flood Modeling was carried out using SOBEK software. Results obtained for Flood modeling of the catchment during the Feasibility Stage is presented in Appendix-2.

3.5 CONCLSIONS & RECOMMENDATIONS

The protection against flooding from the Kondaveeti Vagu and its in falling drains can be mitigated by a combination of measures, which comprises both gravity drainage (part diversion of flood to Krishna Western Delta canal and part diversion to Krishna River through

a flood canal from upper catchment areas connecting Lam-Pedaparimi-Vykuntapuram reservoirs) and pumping at Undavalli outlet. Pumping capacity is needed under all circumstances, lowering and maintaining the water level in the Kondaveeti Vagu to 17.1 m will reduce the flood hazard. Active water level management for the reservoirs in combination with emptying the reservoir or at least reducing water levels when extreme precipitation events are expected will reduce flood hazard. The preemptive emptying of reservoirs seems in disagreement with the water conservation goals. However as this only is needed to prevent flooding under extreme precipitation events and the amount of water available in such an event is very large the net effect of preemptive emptying with regard to water conservation goals will be negligible.

3.6 FINISHED ROAD LEVELS (FRLS)

One of the parameters that depend on the road levels in the capital city are the HFLs. Suitable free board above the HFL as per the IS Code is provided to arrive at the Finished Road Levels at several locations along the proposed road network. These levels become pertinent at the location of bridges and culvert crossings in the city. Depending on the type of traffic for the Class of vehicles that are proposed to cross the bridge in the navigable stretch of the waterways and the HFLs at the particular location, FRLs of the Road at the location is hence decided. Figure 3.1 and Figure 3.2 below present the corresponding FRLs.

Figure 3.1 Finished Road Levels along the Seed Access Road of the Capital City

Figure 3.2 Finished Road Levels along the Main Priority Roads of the Capital City

3.7 FLOOD MITIGATION MEASURES

The Feasibility Report concluded the following flood mitigation measures that are technically feasible to counter the 1 in 100 year storm event:

a) Widening and deepening of the existing Kondaveeti Vagu and Pala Vagu; b) Construction of 2 numbers of Reservoirs – Neerukonda and Krishnayapalem within the capital city and 3 numbers of Reservoirs – Lam, Pedaparimi and Vykuntapuram outside the capital city; and c) Provision of 2 numbers of Flood Pumping Stations one at Undavalli and another at Vykuntapuram.

CHAPTER-4
CONCEPTUAL DESIGN

4.1 BACKGROUND

On the submission of the Feasibility Report in August 2016, there were several discussions with ADC, APCRDA, Government Departments and other stake holders. These discussions mainly centered around the option for flood discharge, having the aesthetics of the flood canal in the capital city and the possibility of usage of the suggested large flood canals for urban navigation, possibility of discharge of storm water by gravity from the surrounding urban areas into the Kondaveeti Vagu and Pala Vagu and the cost for each items thereof. Details regarding the mentioned aspects are given in the following sections.

4.2 STORM WATER DISCHARGE INTO CANALS

One of the main constraints that was encountered in designing the flood management system was the storm water drains in the capital city. Several discussions took place with the Infrastructure Consultant responsible for the design of the same. As per the results of the High Flood levels (HFLs) obtained from the model studies were reduced from RL 17.0m to RL 15.0m, especially in the lower reaches at Undavalli. This also resulted in the constraint of having the pumping at Undavalli necessary not only during floods but also at times where the water level in Kondaveeti and Pala Vagu and their in-falling drains need to be brought down to RL 15.0m to facilitate the discharge of storm water from the city surroundings to the canals by gravity.

4.3 SELECTED OPTION FOR FLOOD DISCHARGE

Of the three options of flood discharge from the capital city described in the previous Chapter, Option-1 of delineating the catchment area into upper and lower catchment and discharging the upper catchment flood through a gravity canal starting from Lam Reservoir and ending at Vykuntapuram Reservoir and pumping the excess flow at Vykuntapuram in the upper catchment and at Undavalli in the lower catchment was finally agreed upon and finalized as the mode of discharge of 1 in 100 year storm event. This decision was taken after a detailed discussion with ADC, APCRDA and relevant Government Departments and all the stakeholders. This option was selected mainly due to the following reasons:

1. Option-2 mainly involved discharge of flood water through the Central Vista and passing through the Secretariat Area which was questionable and not aesthetic;

2. Option-3 which involved pumping all the flood water from the capital city at one single place at Undavalli mainly was redundant; and

3. Option-1 had the advantage of delineating the entire Kondaveeti Vagu into upper and lower catchments and the fact that the works comprising gravity canal from Lam to Vykuntapuram that falls outside the capital city could be taken up at a later stage when the capital city has developed or is in the stage of development.

4.4 NOTABLE CHANGES IN THE CONCEPTUAL DESIGN STAGE

After submittal of final conceptual design report, version November 2016, it was clear that the terrain grading as proposed by the Infrastructure Consultant was meeting a lot of resistance from the local communities. The graded terrain model used in the water system analysis, as required by the client, became herewith obsolete.

During discussions with stakeholders, the client and consultants, a number of notable changes were made to the assumptions and constraints on flood protection, navigability and geometries. As far as the water system and flood protection is concerned the most notable changes are:

1. The Central Vista Canal is not to be used for navigation purposes,
2. The Central Vista Canal is not to be used for flood protection and peak discharges, only discharge of rainfall – runoff water from the direct vicinity of the canal is allowed,
3. For flood protection purposes the graded terrain model is deprecated and the current terrain elevations need to be assumed as future terrain levels. I.e. no terrain grading is foreseen,
4. Option-2 for flood protection as reported earlier during the feasibility stage became obsolete due to these constraints;
5. Option-1 therefore became the preferred solution for flood protection;
6. The reservoir at Neerukonda has to be reduced to approximately half its original surface;
7. Pumping becomes inevitable at two locations – one at Vykuntapuram and second at Undavalli.

4.5 MEETINGS WITH TECHNICAL EXPERT COMMITTEE (TEC)

A series of Technical Expert Committee Meetings were held with Blue Consultant. These were mainly to understand the modeling efforts carried out by Blue Consultant and the discussions with other Government Departments as well. This resulted in the TEC deciding

upon the Flood Flow of 470 m3/sec with an allowance of 100 to 120 m3/sec allowance. Based on this all the detailed design carried out is with respect to the agreed upon flow.

Appendix- 4 presents the Minutes of the Meetings of the TEC Meetings held in this regard for ready reference.

4.6 CONCLUSIONS

Studies during the Conceptual stages of the project that are relevant to the Flood management alone resulted in the following:

- Digital Elevation Model (DEM) to be followed for flood modeling was corresponding to non-graded option. This was obtained from the Infrastructural Consultant and utilized in all flood modeling studies.

- Technical Expert Committee (TEC) finalized the flood flow from the capital city that needs to be discharged for a 1 in 100 year storm event was 470 m3/sec with a margin of 100 to 120 m3/sec exigencies to be considered for designing all the canals and water ways planned within the capital city.

- Option-1 of flood discharge through gravity canal outside the capital city was decided upon as the mode of flood discharge for a 1 in 100 year storm event.

CHAPTER-5
OPTIONS FOR FLOOD DISPOSAL FROM CAPITAL CITY

5.1 GENERAL

There are 3 main options available for disposal of flood water from the Kondaveeti Vagu catchment including its in-falling drains that falls in nearly 2/3rds of the total area of the proposed Amaravati Capital city. These three options are studied apart from the other options of flood discharge that include inter-basin transfer of water. In view of the high cost and large land acquisitions resulting in huge costs, this alternative is further not considered for study. This Chapter provides the details of each of the three options in detail in the following sections.

5.2 OPTION-1

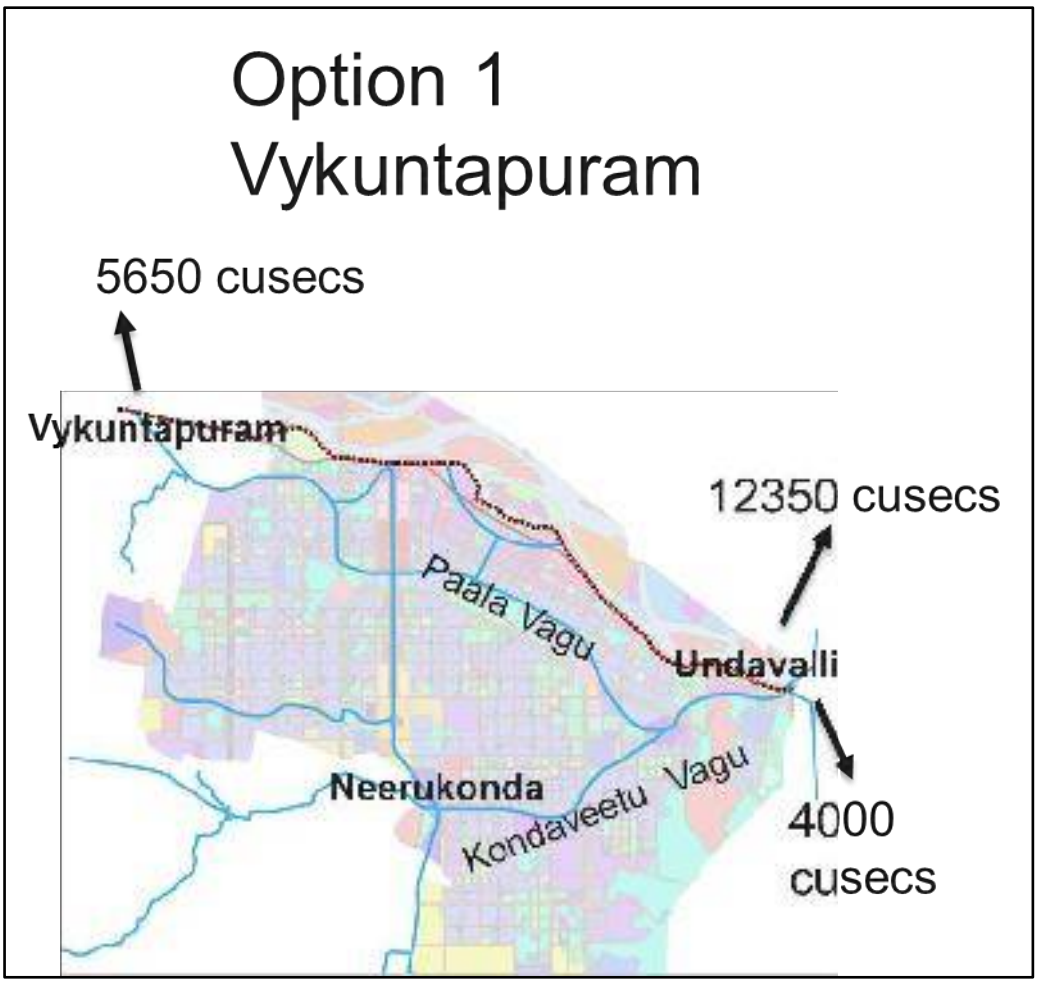

Figure 5.1 Option-1 for Flood Disposal

As indicated in Figure 5.1 above, based on the flood discharges computed, this option involves flood discharge of 5650 cusecs being disposed at Vykuntapuram and a flood discharge of 12350 cusecs (350 m3/sec) at Undavalli and 4000 cusecs (113 m3/sec) being discharged through Krishna Western Delta (KWD) Canal. The discharge from the upper catchment is realized through a gravity canal taking off from Lam Reservoir upto the Vykuntapuram Reservoir via another Reservoir located at Pedaparimi. Thus the upper catchment area of Kondaveeti Vagu is catered to by a gravity canal of total length of …….km and construction of three new reservoirs, namely Lam, Pedaparimi and Vykuntapuram Reservoirs.

The lower catchment of the Kondaveeti Vagu catchment in this option is catered to by Kondaveeti Vagu and Pala Vagu and its in-falling drains draining in to Undavalli where the flood water is pumped at Undavalli Pumping Station.

The advantages of this option are as follows:

1 The entire catchment is delineated into two sections – upper catchment and lower catchment, easing the burden of works involved;
2 The chances of the capital city getting flooded for a 1 in 00 year storm event gets reduced since the upper catchment flood flow is disposed off by means of the gravity canal proposed for this purpose that incidentally lies outside the capital city.
3 The pumping capacity for a 1 in 100 year storm event estimated as 470 m3/sec gets distributed as two pumping stations – one at Vykuntapuram corresponding to a flow of 160 m3/sec and the other at Undavalli corresponding to 350 m3/sec is planned. This lessens the burden of having a pumping station of large capacity at one location.

A flood pumping station at Undavalli is already planned by the Irrigation Department and the work for a total pumping capacity of150 m3/sec is already underway. It is proposed that the balance of flood flow corresponding to 200 m3/sec is planned at the same location.

5.3 OPTION-2

Figure 5.2 presents the details of this option. As indicated in the figure, this option describes disposing flood through the proposed

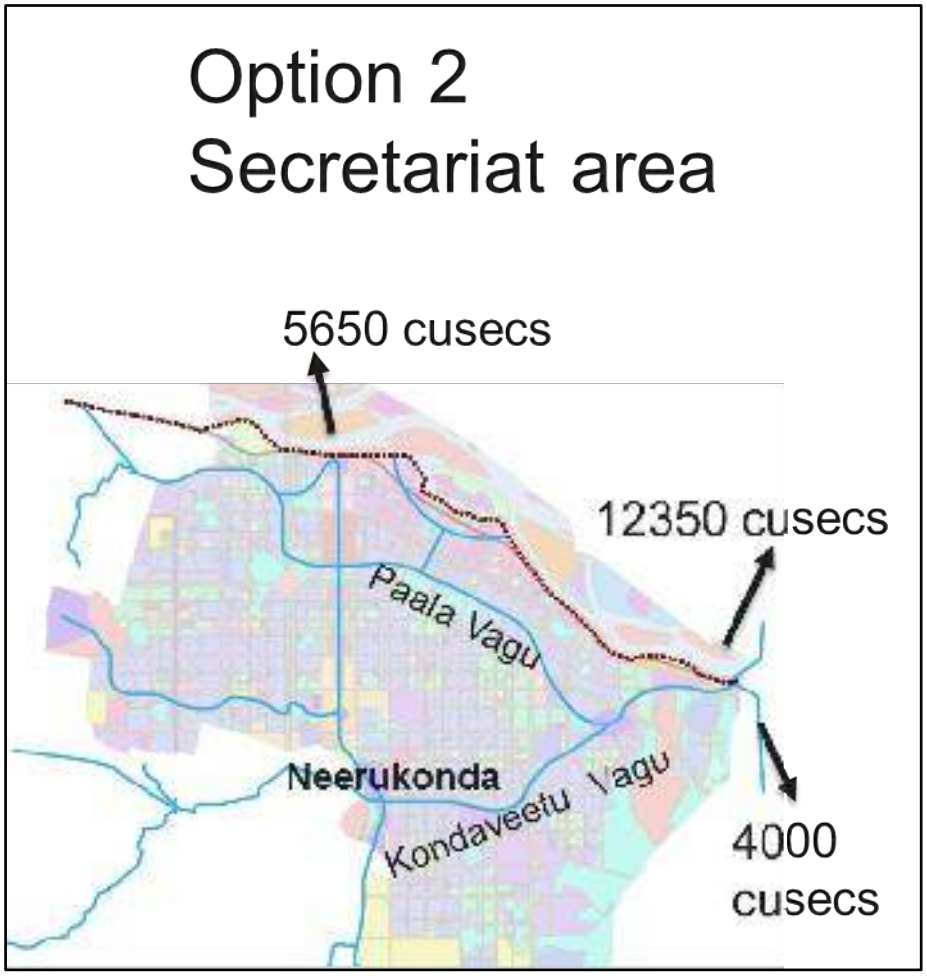

Figure 5.2 Option-2 for Flood Disposal

As indicated, in this Option, there is no gravity canal planned outside the capital city as in Option-1 but instead the flood flow corresponding to 5650 cusecs is planned to be disposed off through the proposed Central Vista canal starting from Neerukonda Reservoir till the Secretariat Area before disposing to River Krishna. This Option does not involve any new land acquisition for the gravity canal as in Option-1 but since the same is planned through the capital city and that too through the Government Complex of the city, the same is uncalled for.

This option also involves pumping at two locations – one at Vykuntapuram and the other at Undavalli.

5.4 OPTION-3

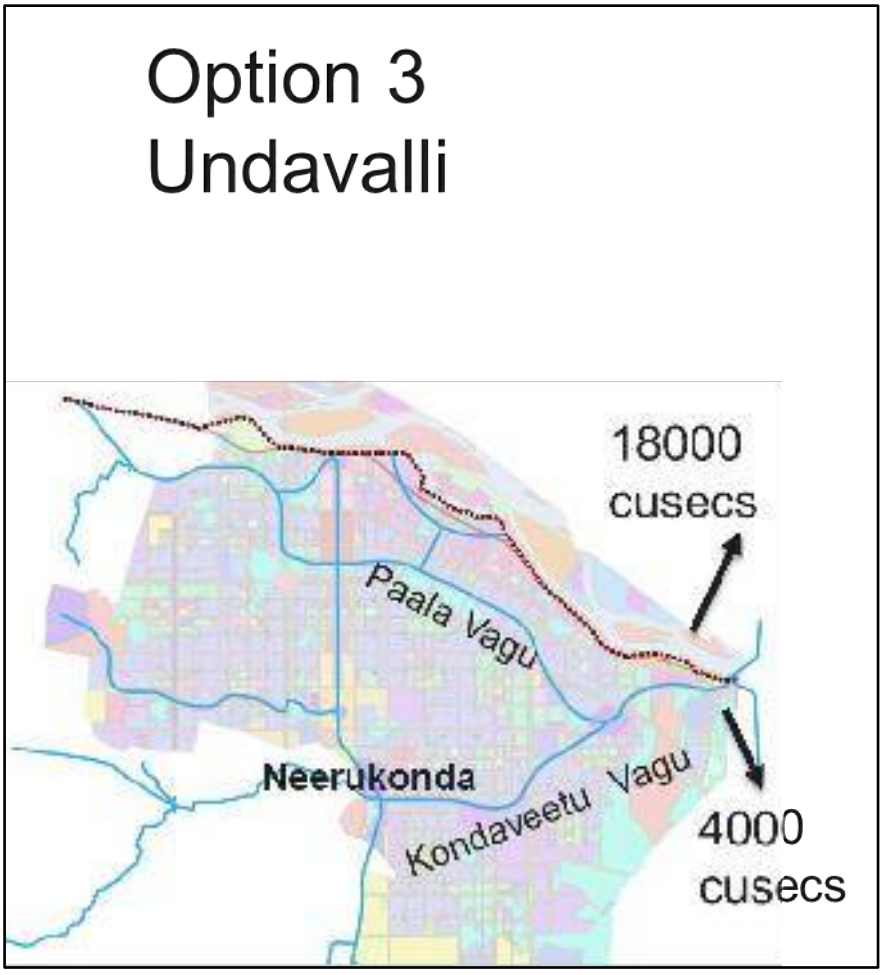

Figure 5.3 Option-3 for Flood Disposal

This Option for flood disposal involves pumping the entire flood flow of 1 in 100 year storm event corresponding to 18,000 cusecs at a single location at Undavalli. Though this option does not involve any new canal and the land acquisition required there-off, the pumping station required at a single location would require large land acquisition and the redundancy of pumps not working and the dependency of pumping of large flows at one location is very high and therefore the risk involved in this Option is too high and therefore this Option is not considered for the study.

Since this Option requires a substantial pumping station and pumping capacity the modeling of this option was difficult to fit the canals leading to the pumping station within the spatial constraints of the city Master plan. The space requirement for the pumping station is also substantial.

As the average water level in the canals had to drop from the earlier proposed 17m to 14m to accommodate the storm water discharge into the canal by gravity, this option becomes technically challenging. The main issue with this option however is the vulnerability and future extension capability. No redundancy exists if anything unforeseen happens and future capacity enlargement is not possible due to geometric constraints.

5.5 SELECTION OF OPTION

The choice of options for flood disposal of the capital city is crucial. Keeping the development of the capital city over the years and also the Land Pooling Scheme (LPS) that is being adopted for the same, selection of proper choice needs to be made.

Technical Expert Committee (TEC) in a series of its deliberations prior to the appointment of Blue Consultant had suggested Option-1. With the advent of Blue Consultant and after a series of deliberations with various stakeholders and also considering the merits and de-merits of each of them, Option-1 was found to be the preferred one. Accordingly, post this decision taken by the Government, all the design work carried out by Blue Consultant is for Option-1.

CHAPTER-6
FLOOD MITIGATION MEASURES

6.1 BACKGROUND

Considering the geographical location of the proposed capital city on the right banks of River Krishna and around 2km upstream of the Prakasam Barrage at Vijayawada and the prevailing regional hydrology the capital city needs to be protected from the T100 or 1 in 100 year storm event.

6.2 FLOOD MITIGATION MEASURES.

Based on the hydrological study to establish the flood flow and considering the various options for flood disposal from the proposed capital city and discussions with various stake holders, it has been established that following flood mitigation measures can encounter a 1 in 100 year storm event and avoid flooding of the capital city:

1. Widening and deepening of existing Kondaveeti Vagu (for widened and deepened canal cross-sections please refer drawing no.TCE.10244A-CV-3023-SI-30004 to TCE.10244A-CV-3023-SI-30019).

2. Widening and deepening of existing Pala Vagu (for widened and deepened canal cross-sections please refer drawing no.TCE.10244A-CV-3023-SI-30020 to TCE.10244A-CV-3023-SI-30040).

3. Construction of the Gravity Canal from Nekkalu to Vykuntapuram (please refer drawing no.TCE.10244A-CV-3023-SI-30041 to TCE.10244A-CV-3023-SI-30055).

2. Construction of 3 numbers of Reservoirs within the capital city – Neerukonda, Krishnayapalem and Sakhamuru (for Reservoir Details refer drawing no.TCE.10244A-CV-3025-SK-30056 to TCE.10244A-CV-3025-SK-30068).

3. Construction of 3 numbers of Reservoirs outside the capital city – Lam, Pedaparimi and Vykuntapuram (this part of the flood mitigation works is planned in the next phase of works)

4. Construction of Flood Pumping Station at Undavalli (for General Arrangement of the pumping station refer drawing no.TCE.10244A-ME-6173-GA-30070 and TCE.10244A-ME-6173-GA-30071).

5. Construction of Flood Pumping Station at Vykuntapuram (for General Arrangement of the pumping station refer Drawing no.TCE.10244A-ME-6173-GA-30078 and TCE.10244A-ME-6173-GA-30079).

The following Chapters of the Report provide the details of each of the above mentioned Flood Mitigation Works proposed for the Capital City. The details of Flood Risks and Mitigation Measures are presented in Table 6.1.

Table 6.1 Flood Risks and Mitigation Measures

Sl. No.	Cause	Effect	Risk	Suggested Mitigation Measure(s)
1.	Increase in paved area due to development of capital city	Increase in peak flood discharge	Inundation of low lying areas in the eastern boundary of capital city during occurrence of peak flood event	a) Improvement of Kondaveeti Vagu, Pala Vagu and other infalling drains b) Management of reservoirs c) Construction of flood pumping stations d) Diversion of flows from upper catchment area along the western boundary of capital city
2.	Gravity canal not available	Excess water cannot be diverted	Flooding near Undavalli and along the course of the Pala Vagu and Kondaveeti Vagu between Undavalli and Neerukonda - *See report for expected area to be flooded.*	Augmentation of KWD escape regulator to divert flows by gravity.
3.	Reservoir at Neerukonda not constructed or smaller than design assumptions	Peak flow cannot be stored and will cause flooding upstream and or downstream of Neerukonda	Flooding near Undavalli and along the course of the Pala Vagu and Kondaveeti Vagu between Undavalli and Neerukonda. *See report for expected area to be flooded*	a) Dimension reservoir (capacity) at correct measures, as given in designs b) Construct additional reservoirs upstream of Neerukonda *(may be difficult due to land acquisition issues)*
4.	Reservoir at Neerukonda is filled before the peak flow arrives	Peak flow will cause overflow of reservoir	Flooding near Undavalli and along the course of the Pala Vagu and Kondaveeti Vagu between Undavalli and Neerukonda. 6.	Pump failure (Electrical failure or power outage)	Pump capacity is unavailable	Flooding near Undavalli and along the course of the Pala Vagu and Kondaveeti Vagu between Undavalli and Neerukonda. *See report for expected area to be flooded*	a) Install backup power (for example diesel generator) atleast for a few pumps. b) Install emergency electrical network or c) install a dedicated electrical network with direct connection to power plant(s). d) Augmentation of KWD escape regulator to divert flows by gravity

CHAPTER-7
DESIGN OF CANAL SYSTEM IN THE CAPITAL CITY

7.1 BACKGROUND

As mentioned in the previous chapter, one of the important flood mitigation measures is to convert the existing Vagus (canals) flowing in the capital city to retain the 1 in 100 year return period storm (470 m3/sec). The following sections provide the details of the same.

7.2 WIDENING AND SEEPENING OF KONDAVEETI VAGU

The existing canal section of Kondaveeti Vagu from Undavalli to Neerukonda Reservoir via Krishnayapalem Reservoir for a total length of 10.3 km shall be widened and deepened to accommodate the 1 in 100 year return period storm that has been computed from SOBEK modeling. The flood flow at Undavalli from the catchment area works out to 470 cumecs. The flows that are predicted in various locations along the Kondaveeti Vagu and its in-falling drain are considered for the respective canal stretches. A summary of the design information of canals is indicated in Table-6.1 below.

7.3 SELECTION OF CANAL LINING

In order that the predicted canal sections to cater to 1 in 100 year storm event carried the requisite flow in a safe manner and also to facilitate Navigation and Cargo movement in the specified canal stretches, a Technical Note on ‘Selection of Canal Lining’ was submitted to ADC and the same was approved. This Note basically discusses the merits and de-merits of different types of lining suggested. A comparison of different types of lining with respect to their properties is made and techno-economic study for the same is carried out.

Considering the type of soil, flow velocities in the canal, aesthetics, maintainability of canals, availability of material, protection against waves and currents due to ship movement, construction costs and time, Gabion mattresses was recommended to be adopted for canals within capital city. Some of the advantages offered by double twisted mesh gabion mattresses are flexibility, durability, strength, permeability, ecology, reliability, longevity, low cost, and an aesthetic appearance. This note is provided in Appendix-5 for reference.

7.4 SELECTION OF CANAL PROFILE

Subsequent to the Not on Canal Lining, constraints regarding the flat green area to be provided on either side of the canal and the utility of the same canal section in the capital city for navigation, commutation and recreation purposes, the canal sizes proposed to suffice the

predicted flood flow had to be matched to fit into the total width allocated in the Master plan for the water way. This brought in a need to look into the canal profile aspect along with the canal lining note that was already submitted. A Technical Note was already submitted to ADC in this regard and the same is presented in Appendix-6.

7.5 CANAL DESIGN

The design information of canals is described in Appendix-7.

7.6 CONCLUSIONS

Based on the deliberations that took place with ADC and various other stake holders and subsequent to submission of the two notes – one on Canal Lining and the other on Canal Profile, following are the type of canal lining and canal profile details that were agreed upon and considered in all future designs:

Cement Concrete lining (150thk) over Cohesive Non-swelling Soil (CNS) layer was selected as the lining material for all the canal sections in the capital city that will be utilized for cargo navigation, passenger commutation and recreation purposes.

Reduced canal sizes conforming to the required flat green area on either side of the canal and to fit into the total width provided for the respective water way as per the Master Plan was adopted for various canals in the capital city.

CHAPTER-8
RESERVOIRS IN THECAPITAL CITY

8.1 GENERAL

Reservoirs planned in the Kondaveeti Vagu catchment under study are mainly from the point of view of attenuation of a 1 in 100 year storm that is likely to be encountered. The concept of flood management using these reservoirs is the concept of pre-emptying them before the monsoons. The sizes of these reservoirs are stipulated in the Master Plan Version-IV and the same is used for flood management purposes.

8.2 RESERVOIR DETAILS

Table 8.1 Details of the Reservoirs planned for Flood Management

Sl. No.	Reservoir	Storage Capacity (TMC)	Full Reservoir Level (RL in m)	Location	Remarks
1.	Lam	0.3	27.50	Upper catchment	Existing (It is suggested to be increase the reservoir capacity)
2.	Pedaparimi	0.3	26.00	Upper catchment	Proposed
3.	Vykuntapuram	0.2	24.00	Upper catchment	Proposed
4.	Neerukonda	0.4	19.00	Lower catchment	Proposed
5.	Krishnayapalem	0.1	15.00	Lower catchment	Proposed
6.	Sakhamuru	0.03	17.00	Lower catchment	Proposed
Total Storage Capacity		**1.33**			

The above Table 8.1 presents details of five numbers of Reservoirs planned from flood management point of view. These include reservoirs at Lam, Pedaparimi, Vykuntapuram, Neerukonda and Krishnayapalem. Apart from these five there also exists a small reservoir at Sakhamuru which is virtually an ornamental confluence point. As indicated in the table, these reservoirs are small and the total volume of all these reservoirs put together works out to 1.3 TMC. The Full Reservoir Levels of each of these reservoirs is as indicated with the highest

being for Lam Reservoir that is located in the higher reaches of the upper catchment of Kondaveeti Vagu.

8.3 RESERVOIRS OUTSIDE THE CAPITAL CITY

Out of the 5 reservoirs proposed for flood management, three numbers of reservoirs are located outside the capital city. These reservoirs include a) Lam; b) Pedaparimi; and c) Vykuntapuram. All these three reservoirs are planned to be interconnected by means of a gravity canal before discharging into River Krishna at Vykuntapuram.

This set of reservoirs outside the capital city is planned to be taken in the second phase after the development of the capital city is achieved pace since the process of land acquisition for these reservoirs and portion of the gravity canal connecting Lam reservoir lying outside the capital city have to commence afresh and would be time consuming. All works related to these reservoirs are planned to be taken up in the second phase of flood management works.

8.4 RESERVOIRS INSIDE THE CAPITAL CITY

Two main reservoirs out of the total five, namely, Neerukonda and Krishnayapalem reservoirs are to be constructed within the capital city. The construction of these reservoirs shall be in parallel with the widening and deepening of the interconnecting canal Kondaveeti Vagu. The said works will be taken up in the first phase since the LPS scheme for land acquisition in the capital city is in process and therefore will not be time consuming as compared to the reservoirs outside the capital city. From the point of view of flood management also the reservoirs inside the capital city area proves crucial for flood attenuation even of normal storm intensities.

The details of each of the reservoirs planned inside the capital city is provided in the following paragraphs.

8.5 NEERUKONDA RESERVOIR

The details of Neerukonda Reservoir is presented in drawing no.TCE.10244A-CV-3025-SK-30057 and 30058. The total area of this reservoir is around 455 acres. The depth of the reservoir is planned at 8 m. The topography of the area is even without major undulations. The entire reservoir needs to be evolved from excavation alone. Therefore, the embankment portion of the reservoir is the depth to which the necessary freeboard needs to be provided of the order of 2 m.

Neerukonda reservoir has interconnections from the southern side with the Kondaveeti Vagu bringing cargo movement from Undavalli via Krishnayapalem. This reservoir therefore serves as an important boarding point of ship movement and therefore the southern part of the reservoir with two portions, one for the Ship lock aiding the movement of the ship and the other portion facilitating the reservoir outlet.

Reservoir outlet portion consists of overflow section and the other non-overflow section. While the overflow section has an Ogee spillway proposed, the non-overflow section is facilitated by Stop logs and Gates. The details of this reservoir control and non-control sections is provided in the respective reservoir drawing and the design calculations for the same is presented in Appendix-8.

From the flood management point of view, Neerukonda Reservoir has to be pre-emptied before the monsoon rains so that it is effective in flood attenuation and flooding of the canal portion till the Krishnayapalem reservoir downstream. For this purpose Neerukonda reservoir therefore has to be pre-emptied till its MDDL allowing for its filling. The pumps at Undavalli will be signaled to start once the water level in Neerukonda reservoir reaches its Full Reservoir level (FRL) of RL 19.0m. This is achieved by instrumentation and Control (I&C) system between Undavalli Flood pumping station and Neerukonda reservoir as detailed in the Chapter 10. The details of Neerukonda Reservoir is presented in Table 8.2.

8.6 KRISHNAYAPALEM RESERVOIR

This reservoir is basically a confluence point of Kondaveeti Vagu and Pala Vagu. This reservoir basically forms a meeting junction of the two vagus and therefore no control structure for this reservoir is necessary. All the cargo moving from Undavalli to Neerukonda reservoir essentially passes through this reservoir. The Full Reservoir Level is maintained at RL 15.0 m which incidentally is the HFL of the Kondaveeti Vagu. The details of Krishnayapalem Reservoir is shown in drawing no.TCE.10244A-CV-3025-SK-30063 and 30064. Table 8.3 shows the details of this reservoir.

8.7 SAKHAMURU RESERVOIR

This reservoir is a confluence point of Kondaveeti Vagu and Secretariat canal. This reservoir proposed for ornamental purpose without any control structure. The Full Reservoir Level is maintained at RL 17.0 m. The details of reservoir is shown in drawing no.TCE.10244A-CV-3025-SK-30065 to TCE.10244A-CV-3025-SK-30068. Table 8.4 shows the details of this reservoir.

CHAPTER-9
FLOOD PUMPING STATIONS

9.1 GENERAL

As explained in the relevant sections of the report, removal of flood water from the capital city by gravity is not technically feasible due to the prevailing hydraulic and topographical constraints. Flood pumping stations are suggested to be constructed to facilitate removal of flood discharges from the capital city. Based on the detailed hydrological modelling studies carried out for the Kondaveeti Vagu catchment, the 100 year peak flood discharges have been estimated for both (i) pre-development (existing conditions) scenario and (ii) post-development (development of capital city) scenario.

9.2 LOCATION AND CAPACITY OF PUMPING STATIONS

The location and number of flood pumping stations required along with quantum of flood discharge required to be pumped at each of the selected locations has been fixed based on the estimated peak flood discharge and considering the Client's requirement of restricting the maximum high flood level at Undavalli outlet to RL 15.00 m in order to facilitate gravity drainage of storm water runoff from existing villages. Accordingly, two (2) numbers of flood pumping stations have been proposed for the capital city, viz., Undavalli and Vykuntapuram. The magnitude of flood discharges to be pumped at Undavalli and Vykuntapuram pumping stations has been estimated to be about 463 m^3/s and 160 m^3/s respectively. Thus, the total magnitude of flood discharge to be pumped out from the capital city works out to 623 m^3/s. The Location Map of Pumping Station at Undavalli and Vykuntapuram is presented in drawing no.TCE.10244A-CV-SK-30069 and TCE.10244A-CV-SK-30077 respectively.

Irrigation Department (ID), Government of Andhra Pradesh has recently taken-up the execution of flood pumping station with a capacity of 150 m^3/s, to prevent flooding of the capital city in the immediate future. Based on discussions with Client and Irrigation Department, it is learnt that pumping station has been located near the existing KWD escape regulator. The contract for construction of above pumping station has been awarded and the works are ongoing. 17 nos. (15 working + 2 standby) of Vertical Turbine pumps have been considered for the pumping station. The pumping station being implemented by the Irrigation Department is near the Undavalli outlet (i.e., close to the pumping station of 463 m^3/s proposed). Considering the pumping capacity of 150 m^3/s (by ID), the balance magnitude of flood to be pumped at Undavalli works out to 313 m^3/s (say 320 m^3/s).

Considering the pumping station (under implementation) by Irrigation Department, the total number of flood pumping stations for the capital city will be three (3). The summary of flood pumping capacity for each of the stations is given below:

- Pumping station at Vykuntapuram = 160 m^3/s
- Pumping station at Undavalli = 320 m^3/s
- Pumping station (by ID) = 150 m^3/s

Total Capacity = 630 m^3/s

9.3 PUMP CONFIGURATION

The pumping capacity indicated above is the net requirement and does not include the spare capacity for pumps. The tentative general arrangement of flood pumping stations at Undavalli drawing no.TCE.10244A-ME-6173-GA-30070 and TCE.10244A-ME-6173-GA-30071 and the same for and Vykuntapuram is shown in the drawing no.TCE.10244A-ME-6173-GA-30078 and TCE.10244A-ME-6173-GA-30079.

Table 9.1 Design Water Levels at Pumping Stations

Sl No.	Pumping Station	Water Level Considered for Pumping Station
1	Undavalli	Suction Level Normal water level: 14 Minimum water level: 13 Maximum Water Level: 15 Discharge Level Normal water level: 19 Minimum water level: 17 Maximum Water Level: 21.5
2	Vykuntapuram	Suction Level Normal water level: 21.5 Minimum water level: 21 Maximum Water Level: 22 Discharge Level Normal water level: 24 Minimum water level: 17 Maximum Water Level: 27

The details of configuration and type of pumps suggested is given in Table 9.2.

Table 9.2 Configuration and Type of Pumps

Sl. No.	Location	Capacity (m^3/s)	Pump Configuration	Remarks
1	Undavalli	320 m^3/s	a) 17 x 20 m^3/s (Volute pumps) b) 3 x 3 m^3/s (VT pumps)	Spare capacity of about 10% capacity has been considered in finalizing the pump configuration.
2	Vykuntapuram	160 m^3/s	a) 9 x 20 m^3/s (Volute pumps) b) 3 x 3 m^3/s (VT pumps)	

As seen from above table, Three (3) nos. of Vertical Turbine pumps, each of 3 m^3/s capacity have been proposed for both pumping stations. Smaller capacity pumps have been suggested for the following reasons:

- Facilitate removal of lower magnitude discharges (Undavalli & Vykuntapuram stations) from the capital city during storms of low intensity during monsoon season, and
- Facilitate re-circulation of stagnant water in the navigable canals periodically during the post-monsoon season.

The design calculations of Pumping Station is presented in Appendix-9.

9.4 PROPOSED GRAVITY DIVERSION SCHEME AND PUMPING CAPACITY AT UNDAVALLI

The storm water network of entire capital city has been designed (by storm water design consultant) to convey the storm runoff by gravity into Kondaveeti Vagu and Pala Vagu. Based on discussion with Storm water consultants, it is learnt that the outfalls of storm water drains have been kept above the estimated 100 year flood level in Kondaveeti and Pala Vagu to facilitate the same. The flood discharges are then removed by operation of pumps at Undavalli and Vykuntapuram flood pumping stations. In view of the hydraulic and topographical constraints prevailing at the project site, the option of diverting flows by gravity is not feasible.

Complete dependency on pumping for removal of flood discharges by pumping involves a considerable risk for the capital city, in case of power failure during severe cyclonic storms or mechanical failure of pumps. Hence, an alternative option involving diversion of flood discharges (partly) by gravity is suggested as a risk mitigation measure. This option involves re-modelling of existing KWD escape regulator or construction of new escape regulator to enable diversion of flood discharges from the capital city by gravity. However, as the water

level in the Krishna Western Delta (KWD) canal is higher than the design HFL of Kondaveeti Vagu at the Undavalli outlet, it is essential to close the head regulator gates of KWD canal and stop the releases from Prakasam Barrage.

In view of demolition of existing KWD escape regulator (to facilitate construction of pumping station proposed by Irrigation Department), it is learnt that a proposal for construction of a new escape regulator is under active consideration by ADC/ID. The details of the proposed escape regulator are not known and hence the same has not been considered in the present study. However, the possibility of any reduction in pumping capacity at Undavalli pumping station may be reviewed by ADC, subsequent to availability of details on capacity of proposed escape regulator. With the construction of proposed escape regulator and part diversion of flood discharges by gravity, the dependence on costly pumping option can be reduced. The extent of reduction in pumping capacity will depend on the discharge capacity of proposed escape regulator and this aspect shall be looked into in the future.

However, it is important to note that diversion of flows by gravity using proposed escape regulator can only be used during occurrence of extremely rare eventualities (but not on a regular basis), since water supply to command area of KWD canal (5.7 Lakh Acres) will be affected, as it requires closure of supply from Prakasam Barrage.

9.5 OPERATION PHILOSOPHY

The flood mitigation measures recommended for the capital city have been designed considering the estimated 100 year peak flood discharge. In order to minimize the overall cost (capital and operation) of flood management works, within the spatial limitations of Master Plan and other technical constraints (as described elsewhere in the report), proper management of entire network of canals, reservoirs and pumping stations has been considered. The capacities of flood pumping stations at Undavalli and Vykuntapuram have been optimized with the assumption that canals and reservoirs will be pre-emptied before the onset of major storm events in order to accommodate the incoming flood volume (i.e., contribution of storage in reservoirs and canals is considered for reduction of flood peaks), thereby reducing the flood discharge that needs pumping.

A 24/7 online based flood and water quality monitoring system has been suggested to be implemented for the entire Kondaveeti Vagu catchment to manage the available infrastructure to prevent flooding of capital city. The schematic drawing showing the online based flood and water quality monitoring system proposed for Kondaveeti Vagu catchment is given below.

The monitoring system will involve installation of weather monitoring stations, level transmitters and water quality sensors at major locations along the canals, reservoirs and pump sumps. All the individual systems are interconnected and relayed to the master control room (proposed to be set up at Undavalli Pumping Station) through optical fiber cable network and wireless communication system. Water levels and quality will be measured along the canal, reservoirs and pump sumps, whereas discharge will be measured at reservoirs.

The flood management system for the entire capital city will be monitored and operated from master control room at Undavalli. The data collected from other locations will be relayed and displayed at the master control room. Based on the weather forecast/warnings issued by the local meteorological station (IMD Gannavaram) and data observed within the catchment area (from Automatic Weather Monitoring Station), reservoirs and canals will be pre-emptied by operation of pumps at any of the three or all the pumping stations.

For this purpose, control of entire system is proposed to be automated with manual back-up system as fail-safe measure. Detailed studies are recommended to carried out to integrate the entire system of canals, reservoirs and pumping stations in the future, before implementation.

CHAPTER-10
INSTRUMENTATION AND CONTROL SYSTEM

10.1 GENERAL

A State of the Art Instrumentation and Control system is envisaged for Flood Management in the Amaravati Capital City.

Operation of the Undavalli Pumping station, water canal network along with the reservoirs (LAM reservoir, Neerukonda reservoir ad Krishnayapalem reservoir) is envisaged from the Main Control Room located in the Undavalli Pumping station. This control room shall be a State of the Art control room.

Similarly, operation of the Vykuntapuram Pumping station and the water canal network with the Vykuntapuram reservoir and Pedaparimi reservoir is envisaged from a Control Room located in the Vykuntapuram Pumping station. However, the Vykuntapuram Control Room is envisaged to be interfaced with the Main Control room at Undavalli Pumping station for Central monitoring of both the Pumping stations.

Independent PLC based control systems are envisaged in the two control rooms for the operation of the pumping stations and near the reservoirs for monitoring the water levels at various points in the canals and reservoirs, operation of the gates at the reservoirs, etc.

Electronic Cubicles for the Control system will be located in the respective Control Equipment Room (CER) located in the Pumping station. Operator Workstations will be located in the Control Room.

Each reservoir will be monitored locally for the water level, water quality, etc. This data will be communicated to the control room in the Pumping stations.

Three (3) nos. of Weather monitoring stations will be located each near LAM Reservoir, Undavalli Pumping station and Vykuntapuram Pumping station.

CCR is envisaged to have consoles with operator workstations for the pump monitoring, electrical systems, vibration monitoring, remote monitoring of the reservoir water levels and quality.

Large Video Screen (LVS) display (1 no. of 80” size cube) would be provided in the Control Room to display the various parameters. The LVS shall be housed in the Undavalli pumping

station Main Control Room for projecting the important parameters /alarm conditions on a larger screen visible to any personnel inside the control room.

Hard wired back up console is not envisaged.

Emergency push buttons (shrouded and two in tandem) for HT pump trip would be provided on the console.

Emergency local stop push button operation would be provided for all motorized drives except for motorized valves and solenoid valves. For motorized valves open/close functions are made available in the integral starter of the actuators.

Provision will be made for availability of all the required information regarding flood management system at various departments/administration officials in the city via wireless / satellite communication.

10.2 CONTROL SYSTEM REQUIREMENTS

A PLC based Control System is envisaged for the Capital city for Control and monitoring of the Pumping stations, canals and reservoirs level, water quality, etc.

The PLC hardware will be located in the Control Equipment Room (CER). Operation of the plant through Operator Workstations will be carried out from the respective Control rooms in the Pumping stations at Undavalli and Vykuntapuram. However, central monitoring of the capital city shall be possible from the Main control room in the Undavalli Pumping station.

The PLC will have set of Redundant controllers with redundant power supply and redundant communication modules.

Microprocessor based controller/PLC is envisaged at each reservoir to collect the information pertaining to the water level, water quality, etc. at that reservoir and the nearby canal network.

These controllers at the all the reservoirs will communicate with the PLC in the Main Control Room at Undavalli Pumping station for centrally monitoring the conditions in the capital city through FO cable network.

Weather Monitoring stations will be located at three different locations in the city to obtain the real time weather conditions and the same will be communicated to the Main control room through FO cable communication network.

All requirements for the Instrumentation and control of the major equipment shall be as per the OEM recommendations.

10.3 FEATURES OF THE I & C SYSTEM

10.3.1 Sequence of Events Recording System

Sequence of Events (SOE) Recording is envisaged as integral to the PLC system.

10.3.2 Annunciation System

Annunciation System will be integral to the PLC system. The alarms shall be displayed in the respective control system and all the alarms shall be made available centrally in the Main Control room at Undavalli Pumping station.

10.3.3 Water Quality Monitoring System (WQMS)

Online, continuous water quality monitoring is envisaged at each reservoir to prevent water pollution and also provide necessary water refreshment. Following parameters will be continuously monitored locally in the local PLC and also communicated to the Main Control room at Undavalli Pumping station.

a) Temperature
b) Turbidity
c) Biological Oxygen Demand
d) Chemical Oxygen Demand
e) Total Dissolved Solids
f) Dissolved Oxygen
g) Chlorine
h) Oil content

The complete hardware associated with this system along with the analyzers will be located in a panel near the reservoir with necessary shelter.

10.3.4 Vibration Monitoring & Analysis System

A vibration monitoring system complete with transducers and remote monitors is envisaged for monitoring the bearing vibrations of all drives at both the Pumping stations. The bearing vibrations would be measured and monitored in both X and Y directions for each bearing at both DE and NDE sides. These shall have local monitors and also hardwired connection with the PLC system.

10.3.5 Local Instruments

The proposed local instruments are as follows:

i. Adequate number of Non contact type Level instruments would be provided in every reservoir and at designated locations in the canal network to enable operators to supervise and monitor the water level across the city.
ii. Indicating type smart transmitters are envisaged for better accuracy and response.
iii. All the thermocouples and RTDs would be duplex type. Temperature transmitters will be provided for the temperature elements.

10.3.6 Weather Monitoring Station

Weather Monitoring stations will be located at three different locations in the city (Undavalli Pumping station, LAM reservoir, Vykuntapuram Pumping station) to obtain the real time weather conditions and the same will be communicated to the nearby PLC and also the Main control room through FO cable communication network. Following parameters will be measured:

a) Wind speed and direction
b) Rain
c) Temperature
d) Humidity
e) Barometric pressure

10.3.7 Instrument Erection & Enclosures

(i) All field instruments shall be of SS316 and if not than shall be mounted in SS 316 enclosure and suitable for the design temperature and humidity.
(ii) Junction Boxes (JB) shall be of complete SS316.
(iii) Outdoor local control panels shall have SS316 enclosure with IP65, whereas indoor panels will be as per IP 54.

10.3.8 Power Supply

Independent UPS shall be located at both the Pumping stations and reservoirs to cater to 110V AC, single phase, 50 Hz, 2 wire power supply requirements of instrumentation and control systems. Power supply arrangement using batteries shall be made for items like level instruments, CCTV, etc. that are at a distance from the UPS.

10.3.9 Cables

I. Instrumentation Cables: Individual / pair shielded and overall shielded twisted pair copper cables would be used for analog signals and overall shielded cables would be

used for digital signals. All these cables will be of 600V AC grade and are armoured. All the insulation including overall sheath would be PVC FRLS quality. The size of the conductor would be 0.5 Sq.mm.

II. Control cables: For control cables carrying 230 V AC, 1.5 sq.mm size stranded copper cable will be used.

III. The interconnecting and communication bus of the PLC and other control systems as well as other special cables will be as per the manufacturer's standard.

IV. Fiber Optic cables are envisaged for communication between the main PLC and remotely located PLC systems.

10.3.10 Testing and Calibration Instrument

Necessary testing and calibration instruments required for the complete C&I system will be provided if required.

10.3.11 Miscellaneous systems

An optic fiber network is envisaged to be laid across the city covering the two pumping stations and the reservoirs and canal network. Utilities that can be benefitted by this FO network are as follows:

a) IP based CCTV network can be installed along the canals and the reservoirs to facilitate surveillance from the Main Control Room.
b) IP based telephone system
c) IP base Public address system

LAN infrastructure at pumping stations and reservoirs, if required.

10.3.12 Earthing

Dedicated Electronic earthing system, in addition to Electrical safety earthing would be provided to take care of requirement of the control system.

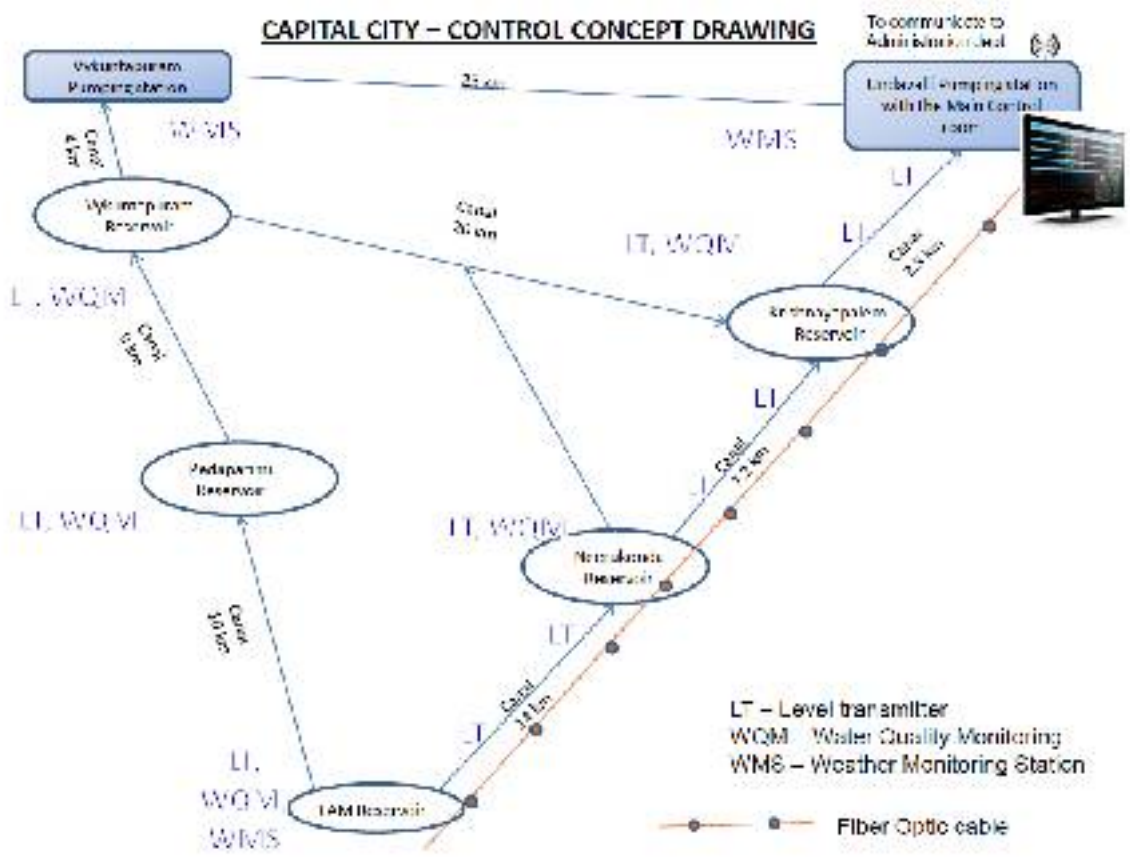

Figure 10.1 Schematic Drawing of Online based Flood and Water Quality Monitoring System

CHAPTER-11
COST ESTIMATES

11.1 GENERAL

The Cost Estimates for each of the component has been prepared based on the standard available rates under the Schedule of Rates (SoR) 2016-17 for Andhra Pradesh State. For certain items where Unit Rates are not available in AP SoR, suitable unit rates as available in Karnataka SoR are utilized in consultation with the Procurement Engineers of ADC as well as with the CDO Engineers. Furthermore, Item rates for certain quantities like De-watering, etc have been discussed in detail with ADC Engineers and suitably adopted.

11.2 SUMMARY OF COSTS

Based on the Bill of Quantities for various items of work under Flood Management of the capital city, summary of costs is tabulated as under:

Table 11.1 Summary of costs

Sl No.	Description	Amount (Rs. In Crores)
1	Construction of Kondaveeti Vagu canal between Undavalli and Neerukonda for a length of 11.0 km in Amaravati capital city	193.47
2	Construction of pale Vagu canal between Dandapadu and Kondamarajupalem for a length of 7.4 km in Amaravati capital city	55.96
3	Construction of pale Vagu canal between Kondamarajupalem and Krishnayapalem for a length of 9.3 km in Amaravati capital city	87.27
4	Construction of gravity/diversion canal between Nekkalu and Pichikalapalem for a length of 7.843 km in Amaravati capital city	153.16
Sub-total for Canals / Vagus		**489.87**
6	Construction of Reservoirs at Neerukonda, Krishnayapalem and Sakhamuru	**666.89**
7	Construction of Pumping Station at Undavalli including Electro-Mechanical works	650
8	Construction of Pumping Station at Vykuntapuram including Electro-Mechanical works	350
Sub-total for Pumping Stations		**1000**
9.	Instrumentation & Control	**5.73**
Total Cost		**2162.49**

11.3 COST OF FUTURE WORKS

The cost of future works as a part of Flood Management of the capital city includes the cost of lining of the canals. This basically includes the cost of proposed 150 mm thick CC lining over the 750 mm thick CNS material. The total cost of the future works is worked out to Rs. 260.13 Crore.

Table 11.2 Construction of Kondaveeti Vagu Canal Between Undavalli and Neerukonda for a Length of 11.0 km

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs.)
A. SITE CLEARANCE & ALLIED WORKS					
A1.	Clearing thin jungle growth (more than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	632,500	m^2	1.40	885,500.00
A2.	Clearing thick jungle growth (less than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	632,500	m^2	2.20	1,391,500.00
B. EXCAVATION & ALLIED WORKS					
B1.	Excavation in all kinds of soil including boulders upto 0.3 m diameter for canal, seating of embankment, filter drains / catch water drains etc., including dressing bed and sides to required level and profile, cost of all materials, machinery, labour, placing the excavated soil neatly in dump area or for the formation of service road / embankment as directed etc., complete with initial lead upto 1 km.				
B1.1	For initial depth of excavation upto 3 m below existing ground level	2,743,000	m^3	95.60	262,230,800.00
B1.2	For depth of excavation beyond initial depth of 3 m (including dewatering)	5,398,000	m^3	98.86	533,638,065.32
B2.	Extra over Item B1 for disposal of excavated soil beyond the initial lead of 1 km				
B2.1	Lead beyond 1 km and upto 2 km	407,050	m^3	12.60	5,128,830.00
B2.2	Lead beyond 2 km and upto 3 km	407,050	m^3	27.30	11,112,465.00
B2.3	Lead beyond 3 km and upto 4 km	407,050	m^3	39.90	16,241,295.00
B2.4	Lead beyond 4 km and upto 5 km	407,050	m^3	52.50	21,370,125.00
B2.5	Lead beyond 5 km and upto 10 km	1,628,200	m^3	115.50	188,057,100.00

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs.)
B2.6	Lead beyond 10 km and upto 15 km	814,100	m^3	178.50	145,316,850.00
B2.7	Lead beyond 15 km and upto 20 km	814,100	m^3	241.50	196,605,150.00
B2.8	Lead beyond 20 km and upto 25 km	814,100	m^3	304.50	247,893,450.00
B2.9	Lead beyond 25 km and upto 30 km	814,100	m^3	367.50	299,181,750.00
C MISCELLANEOUS WORKS					
C1.	Providing and fixing 20 x 20 x 75 cm size roughly dressed chainage stones along the length of canal at 200 m intervals including cost of all materials, labour, engraving marks, fixing in position, murum filling etc., complete with all lead and lifts.	56	Nos.	177.28	9,927.69
C2.	Providing and fixing 20 x 20 x 75 cm size permanent bench mark stone along the length of canal at 500 m interval in CC 1 :3 : 6 block of size 90 x 90 x 120 cm using 40 mm down size graded coarse aggregate and providing 35 cm thick 30 cm high UCR masonry in CM 1 : 5 proportion protective wall alround the BM stone, including cost of all materials, labour, dressing top surface of stone, engraving BM data on top surface, excavation, finishing, curing etc., complete with all lead and lifts.	22	Nos.	6636.26	145,997.66
C3.	Providing and constructing seepage inspection/observation wells along the canal bank at 500 m interval with 150 dia perforated UPVC pipe as per drawing including cement-Bentonite grouting, sand filters, geo textile member, aggregate filling, all materials, labours etc., Construction of inspection chamber 0.6mx0.6x0.6m deep with concrete M20 grade concrete with 20 mm down graded coarse aggregates with medium duty rectangular manhole cover and frame with locking arrangement, complete instrumentation arrangements with water level digital sensor cum recorder, transducer, mounting arrangements, power supply cable, etc as approved by the Engineer), complete as indicated in the drawing or as directed by the Engineer.	22	Nos.	251776.31	5,539,078.74
Total					**1934747884.41**
Total in Crores					**193.47**

B2.9	Lead beyond 25 km and upto 30 km	628,300	m^3	367.50	230,900,250.00
C CONCRETE AND ALLIED WORKS					

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs.)
C1.	Providing and laying insitu vibrated M-10 (28 days cube compressive strength not less than 10 N/sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates for sub-structure / super-structure works including cost of all materials, machinery, labour, formwork, scaffolding, cleaning, batching, mixing, placing in position, levelling, vibrating, finishing, curing etc., complete for all lead and lifts. (Cement content: 220 kg / cum with use of super plasticiser(0.4% by wt. of cement), CA : 0.80cum, Blending Ratio of CA--65:35, FA : 0.45 cum)	70	m^3	4735.09	331,456.01
C2.	Providing and laying insitu vibrated M-25 (28 days cube compressive strength not less than 25 N/sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates including cost of all materials, machinery, labour, formwork, centering, scaffolding, cleaning, batching, mixing, placing in position, levelling, vibrating, finishing, curing etc.,complete for RCC works of bottom raft, piers, abutments, side walls and such other locations for all lead and lifts. (Cement content : 380 kg / cum with use of super plasticiser,CA : 0.90 cum, blending ratio of CA--65:35, FA : 0.40 cum)	2900	m^3	5454.28	15,817,412.09
C3.	Providing, fabricating and placing in position reinforcement steel bars for RCC works including cleaning, straightening, cutting, bending, hooking, lapping, welding wherever required,tying with 1.25 mm dia soft annealed steel wire, including cost of all materials, machinery, labour etc., complete with initial lead upto 50 and all lifts.	410	MT	49876.99	20,449,563.85
C4.	Providing rubble / boulder and sand filling behind abutment and return walls in layers including cost of all materials, machinery, labour, watering, ramming etc., complete with all lead and lifts.	2000	m^3	774.82	1,549,639.55

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs.)
C5.	Providing and filling murum / gravely soil (CNS soil) for foundation including breaking clods, spreading in layers of 10 to 15 cm, watering, compaction by power roller to achieve density control of not less than 98 percent etc., complete with all lead and lifts.	200	m^3	444.02	88,803.89
C6.	Providing and laying insitu vibrated M-15 (28 days cube compressive strength not less than 15 N /sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates for bed and side lining(of thickness 100 mm) of canal including finishing the junction of bed and sides to required curveture, cost of all materials, machinery, labour, formwork including supports, cleaning, batching, mixing, placing in position, levelling, vibrating, finishing, curing etc., complete with all lead and lifts. (Cement content: 300 kg / cum for use of super plasticiser(0.4% by wt. of cement),CA : 0.80 cum, Blending Ratio of CA--65:35, FA : 0.45 cum)	120	m^3	5144.11	617,292.94
D MISCELLANEOUS WORKS					
D1.	Providing and fixing 20 x 20 x 75 cm size roughly dressed chainage stones along the length of canal at 200 m intervals including cost of all materials, labour, engraving marks, fixing in position, murum filling etc., complete with all lead and lifts.	41	Nos.	165.42	6,782.31
D2.	Providing and fixing 20 x 20 x 75 cm size permanent bench mark stone at 500 m interval in CC 1 :3 : 6 block of size 90 x 90 x 120 cm using 40 mm down size graded coarse aggregate and providing 35 cm thick 30 cm high UCR masonry in CM 1 : 5 proportion protective wall alround the BM stone, including cost of all materials, labour, dressing top surface of stone, engraving BM data on top surface, excavation, finishing, curing etc., complete with all lead ans lifts.	16	Nos.	6483.55	103,736.72

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs.)
D3.	Providing and constructing seepage inspection/observation wells all along the canal bank at 500 m interval with 150 dia perforated UPVC pipe as per drawing including cement-Bentonite grouting, sand filters, geo textile member, aggregate filling, all materials, labours etc., Construction of inspection chamber 0.6mx0.6x0.6m deep with M20 grade concrete with 20 mm down graded coarse aggregates with medium duty rectangular manhole cover and frame with locking arrangement, complete instrumentation arrangements with water level digital sensor cum recorder, transducer, mounting arrangements, power supply cable, etc as approved by the Engineer), complete as indicated in the drawing or as directed by the Engineer.	16	Nos.	25174 5.58	4,027,929.29
Total					**1531638769.46**
Total in Crores					**153.16**

Table 11.6 Cost Estimate for Neerukonda Reservoir

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
A. SITE CLEARANCE & ALLIED WORKS					
A1.	Clearing thin jungle growth (more than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	890,500	m^2	1.40	1,246,700.00
A2.	Clearing thick jungle growth (less than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	890,500	m^2	2.20	1,959,100.00
B. EXCAVATION & ALLIED WORKS					
B1.	Excavation in all kinds of soil including boulders upto 0.30 m diameter for reservoir, foundation of spillway and other appurtenant works and placing the excavated soil neatly in dump area or disposing off the same as directed etc., complete with initial lead upto 1 km.				

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
B1.1	For initial depth of excavation upto 3 m below existing ground level	4,751,000	m^3	121.30	576,296,300.00
B1.2	For depth of excavation beyond initial depth of 3 m (including dewatering)	8,343,000	m^3	125.43	1,046,499,615.10
B2.	Extra over Item B1 for disposal of excavated soil beyond the initial lead of 1 km				
B2.1	Lead beyond 1 km and upto 2 km	654,700	m^3	12.60	8,249,220.00
B2.2	Lead beyond 2 km and upto 3 km	654,700	m^3	27.30	17,873,310.00
B2.3	Lead beyond 3 km and upto 4 km	654,700	m^3	39.90	26,122,530.00
B2.4	Lead beyond 4 km and upto 5 km	654,700	m^3	52.50	34,371,750.00
B2.5	Lead beyond 5 km and upto 10 km	2,618,800	m^3	115.50	302,471,400.00
B2.6	Lead beyond 10 km and upto 15 km	1,309,400	m^3	178.50	233,727,900.00
B2.7	Lead beyond 15 km and upto 20 km	1,309,400	m^3	241.50	316,220,100.00
B2.8	Lead beyond 20 km and upto 25 km	1,309,400	m^3	304.50	398,712,300.00
B2.9	Lead beyond 25 km and upto 30 km	1,309,400	m^3	367.50	481,204,500.00
C. EMBANKMENT WORKS					
C1	Providing homogeneous embankment using excavated soil in layers of 25 to 30 cm before compaction including cost of all materials, machinery, labour, all operations such as excavation, sorting out, transportation, spreading soil in layer of specified thickness, breaking clods, sectioning, watering, compacting to density control of not less than 95 percent or as stipulated using Sheep foot roller / Vibratory roller/ 8 to 10 tonne power roller etc., complete with initial lead upto 1 km and all lifts.	442,200	m^3	140.90	62,305,980.00
D. LINING & ALLIED WORKS					
D1	Providing and laying 2.5 mm thick, 275 gsm poly-propeline non-woven geo-textile (filter fabric) for reservoir, including cost of materials, transportation, laying, etc., complete with all leads and lifts, as shown in the drawing or as directed by the Project Manager.	275,000	m^2	202.80	55,770,763.13

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
D2	Providing & laying Gabion mattress with Mechanically Woven Double Twisted Hexagonal Shaped Wire mesh as per IS 16014:2012, Mesh Type 6x8 (D=60 mm), Zinc coated steel wire and coated with extruded and bonded PVC material, Mesh wire diameter 2.7/3.7mm (ID/OD), mechanically edged/selvedged with partitions at every 1m interval and shall have minimum 10 numbers of openings per meter of mesh perpendicular to twist, tying with lacing wire of diameter 2.2/3.2mm(ID/OD), as per drawing or as directed by the Project Manager.	880,000	m^2	942.44	829,344,054.00
D3	Providing and filling (with a maximum lift of 300 mm) 75 mm to 150 mm size hard stones free from dust, including cost of all materials, machinery, labour, all operations such as machine filling, hand placing, compaction, etc as per drawing or as directed by the Project Manager.	82,500	m^3	739.20	60,984,000.00
D4	Excavation of 1 m thick sandy soil and backfilling with impervious soil collected in reservoir area in heaps as part of disposal of excavated soil from reservoir including cost of all materials,machinery, labour, all operations such as sortingout, spreading in layer of 25 cm before compaction, breaking clods,sectioning, watering and compacting each layer to density control of not less than 98 percent or as stipulated by Sheep foot roller / Vibratory roller/ 8 to 10 tonne power roller etc., complete with all leads and lifts.	16,700	m^3	192.43	3,213,655.31
E. CONCRETE AND ALLIED WOKRS					
E1	Providing and laying insitu vibrated M-10 (28 days cube compressive strength not less than 10 N / sq mm) grade cement concrete using 40 mm down size approved, clean, hard, graded aggregates including cost of all materials, machinery, labour, formwork, centering, scaffolding, cleaning, batching, mixing, placing in position, levelling, vibrating, finishing, curing etc.,complete for plain concrete works with all lead and lifts. (Cement content 220 kg /cum with use of super	400	m^3	4415.30	1,766,120.00

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
	plasticiser,CA : 0.90 cum, Blending Ratio of CA:50:30:20, FA:0.40 cum)				
E2	Providing and laying insitu vibrated M-15 (28 days cube compressive strength not less than 15 N / sq mm) grade cement concrete using 40 mm down size approved, clean, hard, graded aggregates with placing and sinking plums of size 150 to 80 mm upto 15 percent for gravity type structures including cost of all materials, machinery, labour, formwork, scaffolding, cleaning, batching, mixing, placing in position, levelling, vibrating, finishing, curing etc.,complete with all lead and lifts. (Cement content : 260 kg / cum of concrete with use of plums and super plasticiser,, CA : 0.77 cum, Blending Ratio of CA : 50:30:20,FA : 0.34 cum, plums of size 150 to 80 mm : 0.25 cum)	1600	m^3	4708.10	7,532,960.00
E3	Providing and laying insitu vibrated M-25 (28 days cube compressive strength not less than 25 N / sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates including cost of all materials, machinery, labour, formwork, centering, scaffolding, cleaning, batching, mixing, placing in position, levelling, vibrating, finishing, curing etc.,complete for RCC works of sluice, spillway crest, spillway d / s face, energy dissipating structures, training walls, piers, abutments and such other locations with all lead and lifts. (Cement content : 380 kg / cum with use of super plasticiser,CA : 0.90 cum, blending ratio of CA--65:35, FA : 0.40 cum)	6200	m^3	5568.90	34,527,180.00
E4	Providing, fabricating and placing in position reinforcement steel for RCC,below 36 dia rods overlaps and wastages wherever required, tying with 1.25 mm diameter soft annealed steel wire, including cost of all materials, machinery, labour etc., complete with initial lead upto 1 km and all lifts.	500	MT	45332.18	22,666,090.00
E5	Expansion/Contraction Joints				

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
E5.1	Providing and constructing contraction joints by fixing 310 mm wide central bulb type approved quality PVC water stop in two lines with 8 mm diameter steel dowel rods on either side at 1m interval, forming 125 x 125 mm size groove in between two water stops, providing & fixing 15 mm dia two legged G.I pipe with U-bend at bottom for circulation steam at interval, forming 150 mm diameter formed drain behind water seals including filling groove with asphalt, circulation of steam at intervals, cost of all materials, machinery, labour etc., complete with all leads and lifts.	15	RM	2453.20	36,798.00
E5.2	Providing and constructing contraction joints by fixing 23 cm wide central bulb type PVC water stop in single line supported by 10 mm dia steel dowel rods on either side at 1 metre interval including cost of all materials, machinery, labour, valcunising joints etc., complete with all leads and lifts.	146	RM	222.00	32,412.00
F. HYDRO-MECHANICAL WORKS					
F1	Coarse Screen				
F1.1	Design, fabrication, supply, erection, testing and commissioning of coarse screen consisting of mild steel flats, stiffeners, bronze padded slide blocks/bearings, guide shoes, rubber seals, clamps etc., with all accessories including cost of all materials, machinery, labour, seal fixing etc.,complete as per specifications and approved drawings (excluding painting on sand-blasted or mechanical cleaning surfaces)	15	MT	130832.90	1,962,493.50
F1.2	Design, fabrication, supply, erection and commissioning of embedded parts consisting of sill beam, slide tracks, seal seats, guide rails, with all accessories for coarse screen including cost of all materials, machinery, labour, etc., complete as per specifications and approved drawings (excluding painting on sand-blasted or mechanical cleaning surfaces).	3	MT	159095.50	477,286.50

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
F1.3	Cleaning gates / hoists / embedded parts/lifting beams etc, to expose fresh metal surface for painting by sand blasting method as per specifications and painting of embedded metal parts and all types of gates, stoplogs,etc, on sand blasted surfaces with one coat of inorganic zinc silicate (airless spray preferred)70+/- 5 and two super coats with a total thickness of 300 microns (each 150+/- 5) of solventless coaltar epoxy paint each coat 150 microns (total 300 microns) cost of all materials, labour, scaffolding etc., complete with all leads and all lifts.	260	m^2	777.00	202,020.00
F2	Spillway Stoplog Gates				
F2.1	Design, fabrication, supply, erection, testing and commissioning of stoplog gate elements, consisting of skin plate, horizontal and vertical girders, stiffeners, lifting pins, bronze padded slide blocks/bearings, guide shoes, rubber seals, clamps etc., with all accessories including cost of all materials, machinery, labour, seal fixing etc.,complete as per specifications and approved drawings (excluding painting on sand-blasted or mechanical cleaning surfaces).	7	MT	130832.90	915,830.30
F2.2	Design, fabrication, supply, erection and commissioning of embedded parts consisting of sill beam, slide tracks, seal seats, guide rails, dogging sets for storage of stoplog elements etc., with all accessories for spillway stop log gates and other vertical lift elements including cost of all materials, machinery, labour, etc., complete as per specifications and approved drawings (excluding painting on sand-blasted or mechanical cleaning surfaces).	4	MT	159095.50	636,382.00
F2.3	Design, fabrication, supply, erection, testing and commissioning of automatic lifting beam with all accessories for handling, lowering and lifting of spillway stop log gate elements including cost of all materials, machinery, labour, cutting, aligning, welding, finishing, etc., complete as per specifications and drawings with all leads and lifts (excluding painting on sand-blasted or	8	MT	112246.20	897,969.60

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
	mechanical cleaning surfaces).				
F2.4	Cleaning gates / hoists / embedded parts/lifting beams etc, to expose fresh metal surface for painting by sand blasting method as per specifications and painting of embedded metal parts and all types of gates, stoplogs,etc, on sand blasted surfaces with one coat of inorganic zinc silicate (airless spray preferred)70+/- 5 and two super coats with a total thickness of 300 microns (each 150+/- 5) of solventless coaltar epoxy paint each coat 150 microns (total 300 microns) cost of all materials, labour, scaffolding etc., complete with all leads and all lifts.	85	m^2	777.00	66,045.00
F3	Spillway Gates				
F3.1	Design, fabrication, supply, erection, testing and commissioning of fixed wheel type vertical lift service gate consisting of skin plate, vertical and horizontal girders, wheels, stiffeners, lifting brackets, guide rollers, ballast blocks, teflon cladded rubber seals etc., with all accessories for orifice spillway including cost of all materials, machinery, labour,welding ,aligning finishing seal fixing etc.with all leads and lifts, complete as per specifications and approved drawings (excluding painting on sand-blasted or mechanical cleaning surfaces).	20	MT	131572.10	2,631,442.00
F3.2	Design, fabrication, supply, erection and commissioning of embedded parts consisting of sill beam, slide tracks, seal seats, guide rails, etc., with all accessories for orifice spillway gates and other vertical lift elements including cost of all materials, machinery, labour, etc., complete as per specifications and approved drawings (excluding painting on sand-blasted or mechanical cleaning surfaces).	6	MT	159095.50	954,573.00
F3.3	Design, fabrication, supply, erection, testing and commissioning of adequate capacity rope drum hoist consisting of hoist platform, rope drum, gear system, electric motor, electro-magnetic brake system, hand operation assembly, control panel, wire rope, pulleys, ladder etc., with all accessories for operating	20	MT	72473.10	1,449,462.00

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
	spillway gate including cost of all materials, machinery, labour, , complete as per specifications and drawings with all leads and lifts (excluding painting on sand-blasted or mechanical cleaning surfaces).				
F3.4	Cleaning gates / hoists / embedded parts/lifting beams etc, to expose fresh metal surface for painting by sand blasting method as per specifications and painting of embedded metal parts and all types of gates, stoplogs,etc, on sand blasted surfaces with one coat of inorganic zinc silicate (airless spray preferred)70+/- 5 and two super coats with a total thickness of 300 microns (each 150+/- 5) of solventless coaltar epoxy paint each coat 150 microns (total 300 microns) cost of all materials, labour, scaffolding etc., complete with all leads and all lifts.	145	m^2	777.00	112,665.00
F4	Sluices				
F4.1	Supply, transportation to site, laying, testing and commissioning of two scouring sluices of size 610 mm (OD) and 5.8 mm thick mild steel pipes including cost of all materials, labour, fabrication, welding, machinery, etc complete as per specifications/drawings or as directed by the Project Manager.	2	MT	69759.61	139,519.22
F4.2	Painting of steel pipes with one coat of inorganic zinc silicate (airless spray preferred) 70+/- 5 and two super coats with a total thickness of 300 microns (each 150+/- 5) of solventless coaltar epoxy paint each coat 150 microns (total 300 microns) cost of all materials, labour, scaffolding etc., complete with all leads and all lifts.	85	m^2	507.60	43,146.00
F4.3	Supply, transportation to site, fixing of D.I double flanged Sluice Valves conforming to IS- 14846 including gear arrangements for 600 mm dia. pipe suitable for a test pressure of PN 1.6 having Body, Bonnet, Dome, Stool cover, Wedge, Stufffing box, Gland, Thrust plate, Cap/Hand wheel with D.I; Stem, Body seat ring, Wedge facing ring, Bushes, Bolts, Nuts, Pinion and Pinion shaft with Stainless steel (IS 6603) ;	2	Nos.	429370.97	858,741.94

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
	Wedge nut, Shoe, Channel with Leaded Tin Bronze (IS 318); Gasket with Neoprene Rubber; Gland packing with Rubber; Gear, Gear housing with Cast Steel including cost of materials, machinery, laboure, etc, complete as per specification/drawing or as directed by the Project Manager.				
Total in Rs					**4,534,482,313.59**
Total in Rs Cr.					**453.45**

Table 11.7 Cost Estimate for Krishnayapalem Reservoir

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
A. SITE CLEARANCE & ALLIED WORKS					
A1.	Clearing thin jungle growth (more than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	384,500	m^2	1.40	538,300.00
A2.	Clearing thick jungle growth (less than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	384,500	m^2	2.20	845,900.00
B. EXCAVATION & ALLIED WORKS					
B1.	Excavation in all kinds of soil including boulders upto 0.30 m diameter for reservoir and placing the excavated soil neatly in dump area or disposing off the same as directed etc., complete with initial lead upto 1 km.				
B1.1	For initial depth of excavation upto 3 m below existing ground level	2,135,000	m^3	121.30	258,975,500.00
B1.2	For depth of excavation beyond initial depth of 3 m (including dewatering)	2,980,000	m^3	125.43	373,794,660.55
B2.	Extra over Item B1 for disposal of excavated soil beyond the initial lead of 1 km				
B2.1	Lead beyond 1 km and upto 2 km	255,750	m^3	12.60	3,222,450.00
B2.2	Lead beyond 2 km and upto 3 km	255,75	m^3	27.30	6,981,975.00

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
		0			
B2.3	Lead beyond 3 km and upto 4 km	255,750	m^3	39.90	10,204,425.00
B2.4	Lead beyond 4 km and upto 5 km	255,750	m^3	52.50	13,426,875.00
B2.5	Lead beyond 5 km and upto 10 km	1,023,000	m^3	115.50	118,156,500.00
B2.6	Lead beyond 10 km and upto 15 km	511,500	m^3	178.50	91,302,750.00
B2.7	Lead beyond 15 km and upto 20 km	511,500	m^3	241.50	123,527,250.00
B2.8	Lead beyond 20 km and upto 25 km	511,500	m^3	304.50	155,751,750.00
B2.9	Lead beyond 25 km and upto 30 km	511,500	m^3	367.50	187,976,250.00
C. EMBANKMENT WORKS					
C1	Providing homogeneous embankment using excavated soil in layers of 25 to 30 cm before compaction including cost of all materials, machinery, labour, all operations such as excavation, sorting out, transportation, spreading soil in layer of specified thickness, breaking clods, sectioning, watering, compacting to density control of not less than 95 percent or as stipulated using Sheep foot roller / Vibratory roller/ 8 to 10 tonne power roller etc., complete with initial lead upto 1 km and all lifts.	3,400	m^3	140.90	479,060.00
D. LINING & ALLIED WORKS					
D1	Providing and laying 2.5 mm thick, 275 gsm poly-propeline non-woven geo-textile (filter fabric) for reservoir, including cost of materials, transportation, laying, etc., complete with all leads and lifts, as shown in the drawing or as directed by the Project Manager.	71,800	m^2	202.80	14,561,239.25
D2	Providing & laying Gabion mattress with Mechanically Woven Double Twisted Hexagonal Shaped Wire mesh as per IS 16014:2012, Mesh Type 6x8 (D=60 mm), Zinc coated steel wire and coated with extruded and bonded PVC material, Mesh wire diameter 2.7/3.7mm (ID/OD), mechanically edged/selvedged with partitions at every 1m interval and shall have minimum 10 numbers of openings per meter of mesh perpendicular to twist,	230,400	m^2	942.44	217,137,352.32

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
	tying with lacing wire of diameter 2.2/3.2mm(ID/OD), as per drawing or as directed by the Project Manager.				
D3	Providing and filling (with a maximum lift of 300 mm) 75 mm to 150 mm size hard stones free from dust, including cost of all materials, machinery, labour, all operations such as machine filling, hand placing, compaction, etc as per drawing or as directed by the Project Manager.	21,600	m^3	802.20	17,327,520.00
D4	Excavation of 1 m thick sandy soil and backfilling with impervious soil collected in reservoir area in heaps as part of disposal of excavated soil from reservoir including cost of all materials,machinery, labour, all operations such as sortingout, spreading in layer of 25 cm before compaction, breaking clods,sectioning, watering and compacting each layer to density control of not less than 98 percent or as stipulated by Sheep foot roller / Vibratory roller/ 8 to 10 tonne power roller etc., complete with all leads and lifts.	1,000	m^3	192.43	192,434.45
Total in Rs					**1,594,402,191.57**
Total in Rs Cr.					**159.44**

Table 11.8 Cost Estimate for Sakhamuru Reservoir

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
A. SITE CLEARANCE & ALLIED WORKS					
A1.	Clearing thin jungle growth (more than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	101,500	m^2	1.40	142,100.00
A2.	Clearing thick jungle growth (less than 50 percent open space) including bushes upto 30 cm / parthenium and other weeds including burning or disposing off the same as directed etc., complete.	101,500	m^2	2.20	223,300.00

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
B. EXCAVATION & ALLIED WORKS					
B1.	Excavation in all kinds of soil including boulders upto 0.30 m diameter for reservoir and placing the excavated soil neatly in dump area or disposing off the same as directed etc., complete with initial lead upto 1 km.				
B1.1	For initial depth of excavation upto 3 m below existing ground level	474,000	m^3	121.30	57,496,200.00
B1.2	For depth of excavation beyond initial depth of 3 m (including dewatering)	983,000	m^3	125.43	123,302,064.20
B2.	Extra over Item B1 for disposal of excavated soil beyond the initial lead of 1 km				
B2.1	Lead beyond 1 km and upto 2 km	72,850	m^3	12.60	917,910.00
B2.2	Lead beyond 2 km and upto 3 km	72,850	m^3	27.30	1,988,805.00
B2.3	Lead beyond 3 km and upto 4 km	72,850	m^3	39.90	2,906,715.00
B2.4	Lead beyond 4 km and upto 5 km	72,850	m^3	52.50	3,824,625.00

B2.7	Lead beyond 15 km and upto 20 km	145,700	m^3	241.50	35,186,550.00
B2.8	Lead beyond 20 km and upto 25 km	145,700	m^3	304.50	44,365,650.00
B2.9	Lead beyond 25 km and upto 30 km	145,700	m^3	367.50	53,544,750.00
C. LINING & ALLIED WORKS					
C1	Providing and laying 2.5 mm thick, 275 gsm poly-propeline non-woven geo-textile (filter fabric) for reservoir, including cost of materials, transportation, laying, etc., complete with all leads and lifts, as shown in the drawing or as directed by the Project Manager.	45,700	m^2	202.80	9,268,086.82
C2	Providing & laying Gabion mattress with Mechanically Woven Double Twisted Hexagonal Shaped Wire mesh as per IS 16014:2012, Mesh Type 6x8 (D=60 mm), Zinc coated steel wire and coated with extruded and bonded PVC material, Mesh wire diameter 2.7/3.7mm (ID/OD), mechanically edged/selvedged with partitions at every 1m interval and shall have minimum 10 numbers of	146,133	m^2	942.44	137,721,376.24

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount in Rs.
	openings per meter of mesh perpendicular to twist, tying with lacing wire of diameter 2.2/3.2mm(ID/OD), as per drawing or as directed by the Project Manager.				
C3	Providing and filling (with a maximum lift of 300 mm) 75 mm to 150 mm size hard stones free from dust, including cost of all materials, machinery, labour, all operations such as machine filling, hand placing, compaction, etc as per drawing or as directed by the Project Manager.	13,700	m^3	676.20	9,263,940.00
C4	Excavation of 1 m thick sandy soil and backfilling with impervious soil collected in reservoir area in heaps as part of disposal of excavated soil from reservoir including cost of all materials,machinery, labour, all operations such as sortingout, spreading in layer of 25 cm before compaction, breaking clods,sectioning, watering and compacting each layer to density control of not less than 98 percent or as stipulated by Sheep foot roller / Vibratory roller/ 8 to 10 tonne power roller etc., complete with all leads and lifts.	1,000	m^3	192.43	192,434.45
Total in Rs					**540,008,656.71**
Total in Rs Cr.					**54.00**

Table 11.9 Instrumentation & Control Cost - Flood Management System

Sl No.	Item Description	Cost (Rs.)
1	PLC system with workstations, field instruments for pumping stations - One PLC at each Pumping station and one PLC at each reservoir	13000000
2	Field instruments for Canal and reservoirs - 50 nos.	3000000
3	Water Quality measuring system for Canal and reservoirs - 4 nos.	16000000
4	Weather monitoring station - 3 nos.	100000
5	Fiber optic cable network with associated hardware (approx length - 80km)	15000000
6	Miscellaneous (Control room consoles, Containers, LVS, CCTV, Cables, etc..)	5000000
7	Erection cost	5200000
	TOTAL	**57300000**
	Total Cost in Crores	**5.73**

Table 11.10 Cost Estimate for Canal Lining (Future Work)

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs. In Crores)
A. Kondaveeti Vagu- between Undavalli & Neerukonda					
A1.	Providing cohesive non-swelling (CNS) soil lining to canals using soil from approved borrow area including spreading soil in layers of thickness not more than 15 cm, breaking clods, watering, compacting to density control of not less than 98 percent or as stipulated, dressing to required profile etc., complete with all lead and lifts.	808,500	m^3	395.26	31.96
A2.	Providing and laying 150mm thick insitu vibrated M-15 (28 days cube compressive strength-not less than 15.00 N / sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates for bed and side lining of canal lining using vibrating cylindertype mechanical paver including cost of all materials machinery labour batching mixing placing in position forming contraction joints fixing PVC joint seiling strips shifting of paver from one side of canal to other side etc.complete with all leads & lifts. (Cement content: 300 kg / cum for use of super plasticiser(0.4% by	1,078,000	m^2	709.19	76.45

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs. In Crores)
	wt. of cement),CA : 0.80 cum, Blending Ratio of CA--65:35, FA : 0.44 cum)				
A3.	Providing, fabricating and placing in position reinforcement steel bars for temperature reinforcement of CC lining for canal including cleaning, straightening, cutting, bending, hooking, lapping, tying with 1.25 mm dia. soft annealed steel wire, welding wherever required including cost of all materials, machinery, labour etc., complete with initial lead upto 50 and all lifts.(1.05 tonne/tonne of steel)	4,050	MT	49604.31	20.09
				TOTAL	**128.50**
B. Pala Vagu- between Dondapadu & Kondamarajupalem					
B1.	Providing cohesive non-swelling (CNS) soil lining to canals using soil from approved borrow area including spreading soil in layers of thickness not more than 15 cm, breaking clods, watering, compacting to density control of not less than 98 percent or as stipulated, dressing to required profile etc., complete with all lead and lifts.	183,200	m^3	332.26	6.09
B2.	Providing and laying 150mm thick insitu vibrated M-15 (28 days cube compressive strength-not less than 15.00 N / sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates for bed and side lining of canal lining using vibrating cylinder type mechanical paver including cost of all materials machinery labour batching mixing placing in position forming contraction joints fixing PVC joint seiling strips shifting of paver from one side of canal to other side etc.complete with all leads & lifts. (Cement content: 300 kg / cum for use of super plasticiser(0.4% by wt. of cement),CA : 0.80 cum, Blending Ratio of CA--65:35, FA : 0.44 cum)	244,200	m^2	700.88	17.12
B3.	Providing, fabricating and placing in position reinforcement steel bars for temperature reinforcement of CC lining for canal including cleaning, straightening, cutting, bending, hooking, lapping, tying with 1.25 mm dia. soft annealed steel wire, welding wherever required including cost of all materials, machinery, labour etc., complete with initial lead upto 50 and	920	MT	49604.31	4.56

	all lifts.(1.05 tonne/tonne of steel)				
				TOTAL	**27.77**
C. Pala Vagu- between Kondamarajupalem & Krishnayapalem					
C1.	Providing cohesive non-swelling (CNS) soil lining to canals using soil from approved borrow area including spreading soil in layers of thickness not more than 15 cm, breaking clods, watering, compacting to density control of not less than 98 percent or as stipulated, dressing to required profile etc., complete with all lead and lifts.	341,800	m^3	395.26	13.51
C2.	Providing and laying 150mm thick insitu vibrated M-15 (28 days cube compressive strength-not less than 15.00 N / sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates for bed and side lining of canal lining using vibrating cylindertype mechanical paver including cost of all materials machinery labour batching mixing placing in position forming contraction joints fixing PVC joint seiling strips shifting of paver from one side of canal to other side etc.complete with all leads & lifts. (Cement content: 300 kg / cum for use of super plasticiser(0.4% by wt. of cement),CA : 0.80 cum, Blending Ratio of CA--65:35, FA : 0.44 cum)	455,700	m^2	706.45	32.19
C3.	Providing, fabricating and placing in position reinforcement steel bars for temperature reinforcement of CC lining for canal including cleaning, straightening, cutting, bending, hooking, lapping, tying with 1.25 mm dia. soft annealed steel wire, welding wherever required including cost of all materials, machinery, labour etc., complete with initial lead upto 50 and all lifts.(1.05 tonne/tonne of steel)	1,710	MT	49604.31	8.48
				TOTAL	**54.19**
D. Gravity/Diversion Canal- between Nekkallu & Pichikalapalem					
D1.	Providing cohesive non-swelling (CNS) soil lining to canals using soil from approved borrow area including spreading soil in layers of thickness not more than 15 cm, breaking clods, watering, compacting to density control of not less than 98 percent or as stipulated, dressing	347,100	m^3	256.66	8.91

Item No.	Description of Item	Qty	Unit	Rate (Rs.)	Amount (Rs. In Crores)
	to required profile etc., complete with all lead and lifts.				
D2.	Providing and laying 150mm thick insitu vibrated M-15 (28 days cube compressive strength-not less than 15.00 N / sq mm) grade cement concrete using 20 mm down size approved, clean, hard, graded aggregates for bed and side lining of canal lining using vibrating cylindertype mechanical paver including cost of all materials machinery labour batching mixing placing in position forming contraction joints fixing PVC joint seiling strips shifting of paver from one side of canal to other side etc.complete with all leads & lifts. (Cement content: 300 kg / cum for use of super plasticiser(0.4% by wt. of cement),CA : 0.80 cum, Blending Ratio of CA--65:35, FA : 0.44 cum)	462,737	m^2	694.56	32.14
D3.	Providing, fabricating and placing in position reinforcement steel bars for temperature reinforcement of CC lining for canal including cleaning, straightening, cutting, bending, hooking, lapping, tying with 1.25 mm dia. soft annealed steel wire, welding wherever required including cost of all materials, machinery, labour etc., complete with initial lead upto 50 and all lifts.(1.05 tonne/tonne of steel)	1,740	MT	49604.31	8.63
				TOTAL	**49.68**

CHAPTER-12

PROJECT IMPLEMENTATION SCHEDULE AND CONTRACT PACKAGING

12.1 GENERAL

The proposed Flood Management System in Amaravati Capital City shall be developed in the following phases (a) Earth works of all Canals within the capital city including the three Reservoirs at Neerukonda, Krishnayapalem and Sakhamuru including their Control Structures; (b) Canal Lining Works for all the navigable stretches of Kondaveeti and Pala Vagu; c) Construction of Flood Pumping Station at Undavalli; and d) Construction of Flood Pumping Station at Vykuntapuram..

12.2 BASE COST OF THE PROJECT

For estimating the cost of the various components of the project, Schedule of Rates (SoR) 2016-17 for Andhra Pradesh State has been adopted. The base cost of the project is **Rs. 2162.49 Crore.**

12.3 CONTRACT PACKAGING

The whole works will be divided into the following Contract Packages as indicated below.

Table 12.1 Tender Packaging

Tender - 1: Canals within Capital City	
Package 1	Construction of Kondaveeti Vagu Canal Between Undavalli and Neerukonda for a Length Of 11.0 Km in Amaravati Capital City
Package 2	Canal between Anantavaram and Sakhamuru – *not part of Flood Management*
Package 3	Construction of Pala Vagu Canal between Dondapadu and Kondamarajupalem for a Length of 7.4 Km in Amaravati Capital City
Package 4	Construction Of Pala Vagu Canal Between Kondamarajupalem and Krishnayapalem For A Length Of 9.3 Km In Amaravati Capital City
Package 5	Construction of Gravity/Diversion Canal between Nekkallu and Pichikalapalem for a Length of 7.843 Km in Amaravati Capital City
Tender – 2: Reservoirs Within Capital City	
Package 6	Construction of Neerukonda, Krishnayapalem and Sakhamuru Reservoirs in Amaravati Capital City
Tender – 3: Reservoirs Within Capital City	
Package 7	Construction of Flood Pumping Stations at Undavalli and Vykuntapuram

12.4 CONTRACT APPROACH

The procurement procedure for canal works shall be Item Rate Contract with two (2) envelope system as per the guideline stipulated by World Bank. Bidder will be selected based on National Competitive Bidding (NCB) or International Competitive Bidding (ICB) based on the project cost.

The procurement procedure adopted for reservoir will be Engineering Procurement and Construction (EPC) with two (2) envelope system as per the guideline stipulated by World Bank. Bidder will be selected based on either National Competitive Bidding (NCB) or International Competitive Bidding (ICB) based on the project cost.

The Contractor will be responsible for preparation of detailed design and construction drawings, execution of work, testing and commissioning including quality control, safety and timely completion of work. If required, review of drawings and clearing of designs shall be done by ADC.

12.5 IMPLEMENTATION SCHEDULE

The implementation schedule for the project is presented in Appendix-10. It is expected to start the construction works for canal by February 2018 and with 9 months construction periods the work will be commissioned by end of October 2018.

The construction of reservoir works is also expected to start by February 2018 and the work will be commissioned by end of April 2019 with 15 months construction periods.

CHAPTER-13
CONCLUSIONS AND RECOMMENDATIONS

13.1 CONCLUSIONS AND RECOMMENDATIONS

Following conclusions and recommendations are made for effective Flood Management of the proposed Capital City Amaravati. These are also based on several inferences made during various meetings with ADC, APCRDA, ID and all stakeholders and the directives from Amaravati Development Corporation Ltd. (ADCL).

I. In view of the topography of the location of the proposed capital city Amaravati on the right banks of River Krishna and upstream of existing Prakasam Barrage at Vijayawada, the capital city needs to be protected for a 1 in 100 year storm event in the catchment area of Kondaveeti Vagu.

II. Using SOBEK software, flood modeling of the Kondaveeti Vagu catchment (221 sq km) including its in-falling drains is carried out for a 1 in 100 year storm event. A flood flow of 470 m3/sec is estimated using this software. This is used in estimating the various canals and reservoirs in the capital city.

III. Duly considering the magnitude of flood flow for the 1 in 100 year storm event in the catchment area and design considerations including the Risk factors, Flood Mitigation Measures to be adopted to protect the capital city includes: a) Widening and Deepening of Kondaveeti Vagu and its in-falling drains; b) Construction of 5 Reservoirs – 3 outside the capital city – Lam, Pedaparimi and Vykuntapuram; 2 inside the capital city – Neerukonda and Krishnayapalem; and c) Construction of Flood Pumping Stations at Vykuntapuram and Undavalli.

IV. As per the discussions with ADC and relevant Government Departments, the Flood Mitigation measures to be adopted for the capital city for the canals in the catchment area shall be as follows: a) All Earthwork Excavation for Kondaveeti Vagu and its in-falling drains in the first phase followed by b) Canal lining works and associated works including the construction of reservoirs outside the capital city at Lam, Pedaparimi and Vykuntapuram in the second phase.

Based on the Standard Guidelines available of design of various components in the waterways system for the Capital City and the Schedule of Rates (SoR) of Andhra Pradesh State, the total cost of the Urban Waterways works out to **Rs. 2162.49 Crores.**

CHAPTER I

PRELIMINARY

101 GENERAL

101.1 Short Title. These regulations shall be known as the Zoning Regulations of Amaravati Capital City Area, hereinafter referred to as 'these regulations'.

101.2 Intent. The purpose of these regulations is to safeguard the health, property and public welfare by controlling the design, location, use or occupancy of all buildings and structures through the regulated and orderly development of land and land uses within this jurisdiction.

101.3 Applicability. The provisions of these regulations shall apply to the construction, addition, alteration, moving, repair and use of any building, structure, parcel of land or sign within a jurisdiction, except work located primarily in a public way, public utility towers and poles, and public utilities unless specifically mentioned in these regulations.

Where, in any specific case, different sections of these regulations specify different requirements, the more restrictive shall govern. Where there is conflict between a general requirement and a specific requirement, the specific requirement shall be applicable.

In fulfilling these purposes, this plan is intended to benefit the public as a whole and not any specific person or class of persons. Although, through the implementation, administration and enforcement of these regulations, benefits and detriments will be enjoyed or suffered by specific individuals, such is merely a byproduct of the overall benefit to the whole community. Therefore, unintentional breaches of the obligations of administration and enforcement imposed on the jurisdiction hereby shall not be enforceable in tort.

If any portion of these regulations is held invalid for any reason, the remaining herein shall not be affected.

Exception: Existing buildings undergoing repair, alteration or additions and change of occupancy shall be permitted to comply with the National Building Code.

101.4 Scope. Unless otherwise expressly stated, the following words and terms shall, for the purposes of these regulations, have the meanings shown in this chapter.

101.5 Interchangeability. Words used in the present tense include the future; words stated in the masculine gender include the feminine and neutral gender; the singular number includes the plural and the plural, the singular.

101.6 Terms defined elsewhere. Where terms are not defined in these regulations and are defined in the National Building Code or the Andhra Pradesh Capital Region Devlopment Authority Act, such terms shall have the meanings ascribed to them therein. It is not required that all the terms defined in these regulations are used.

101.7 Terms not defined. Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.

102 DEFINITIONS

Act means Andhra Pradesh Capital Region Development Authority Act, 2014.

ancillary building means any building erected on a plot that is incidental to a primary building on the same plot and the use of which is in connection with that primary building such as a detached garage.

ancillary living quarters means ancillary building used solely as the temporary dwelling of guests of the occupants of the premises; such dwelling having no kitchen facilities and not rented or otherwise used as a separate dwelling unit.

ancillary use means a use conducted on the same lot as the primary use of the structure to which it is related; a use that is clearly incidental to, and customarily found in connection with, such primary use.

alteration means any change, addition or modification in construction, occupancy or use.

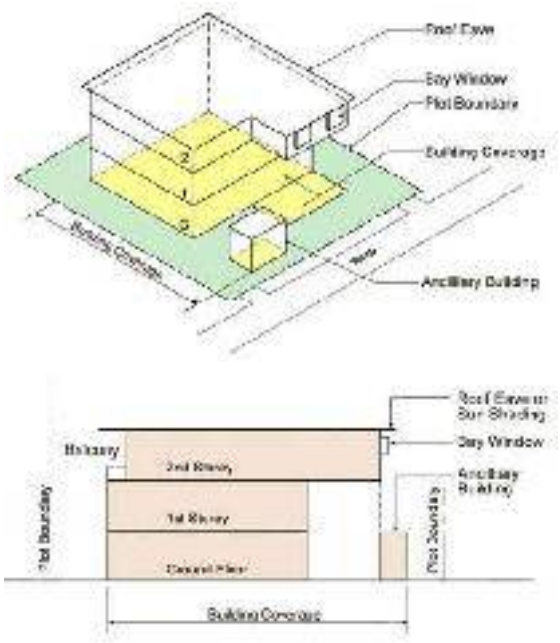
amusement centre means an establishment offering five or more amusement devices, including, but not limited to, coin-operated electronic games, shooting galleries, table games and similar recreational diversions within an enclosed building.

apartments means a building having five or more dwelling units and common services on a given site or plot in a single or multiple blocks, without customary sub-division of land by way of individual plots.

automotive workshop, major An establishment primarily engaged in the repair or maintenance of motor vehicles, trailers and similar large mechanical equipment, including paint, body and fender, and major engine and engine part overhaul, which is conducted within a completely enclosed building.

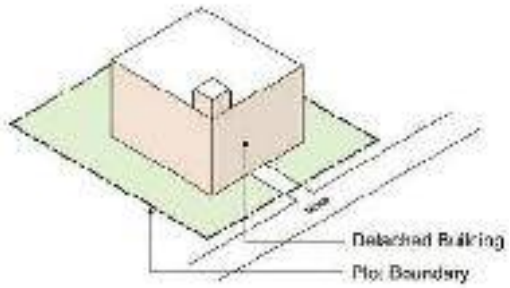
automotive workshop, minor means an establishment primarily engaged in the repair or maintenance of motor vehicles, trailers and similar mechanical equipment, including brake, muffler, upholstery work, tire repair and change, lubrication, tune ups, and transmission work, which is conducted within a completely enclosed building.

basement Any floor level below the ground level story in a building.

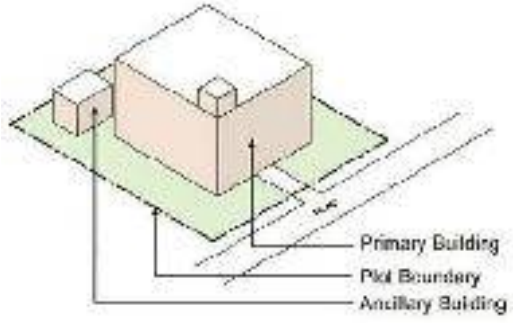


Big Box store means a physically large retail establishment usually a large free standing, rectangular, generally a single floor structure built on a concrete slab. The flat roof and ceiling trusses are generally made of steel and walls are concrete block clad in metal or masonry building. Such structures are generally more than 50,000 square feet in area.

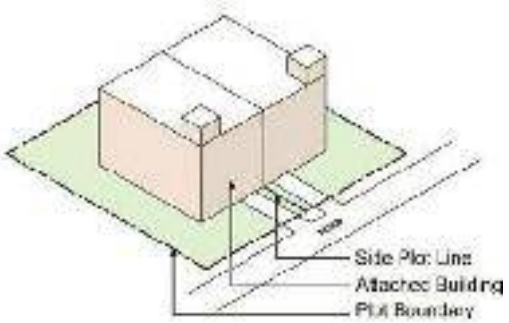
building means as defined in the Act.



building, attached means a building that abuts another building on the side plot line without any side setback.

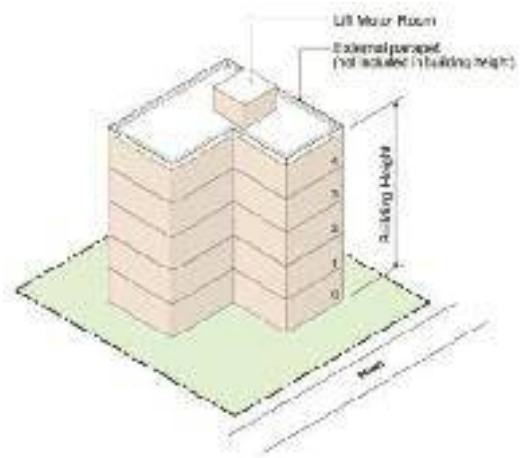


building, coverage means the percentage of the plot area occupied by the ground area of the primary and all ancillary buildings on such plot, inclusive of the shadow area created by cantilevered building projections, but do not include the following: . Bay windows with a projection of 0.5m or less.
. Roof eaves and sun shading projections.
. The shadow area of a building that is from the 3rd storey and above (to encourage viable landscaping at the ground level and shaded communal spaces, and promote building articulation and a variety of architectural designs).
Computation of building coverage shall include all existing developments within the plot.

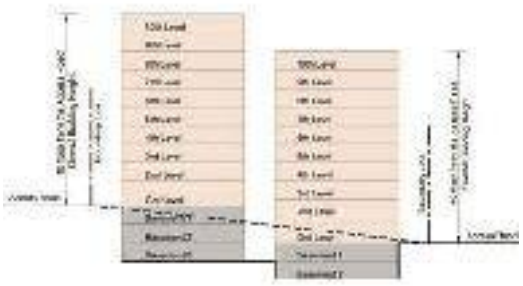


building, detached means a freestanding building that does not abut any other building on any side and open space is provided around all sides of the building and plot lines.

building, main or primary building means a building in which the principal use of the site is conducted for which the plot has been zoned.



building, semi-detached means a building that abuts another building on one side of the plot line and side setback on the other side.



building, temporary means a building used temporarily for the storage of construction materials and equipment incidental and necessary to on-site permitted construction of utilities, or other community facilities, or used temporarily in conjunction with the sale of property within a subdivision under construction.

building code means the National Building Code.

building, height means the overall height of a building measured from grade or access road to the top of the last storey or the highest point of the building including stilt parking, but does not include: external parapets not exceeding 1.5m, lift overruns, antennae, rooftop mechanical and electrical service rooms and structures, and any other permitted structures as may be allowed by the sanctioning Authority from time to time. Along the slopes or along contoured topography the building height is measured as illustrated in the figure below.

building line means the perimeter of that portion of a building or structure nearest a property line, but excluding open steps, terraces, cornices and other ornamental features projecting from the walls of the building or structure.

business or financial services means an establishment intended for the conduct or service or administration by a commercial enterprise, or offices for the conduct of professional or business service.

canopy means a roofed structure constructed of fabric or other material supported by the building or by support extending to the ground directly under the canopy placed so as to extend outward from the building providing a protective shield for doors, windows and other openings.

commercial, heavy means an establishment or business that generally uses open sales yards, outside equipment storage or outside activities that generate noise or other impacts considered incompatible with less intense uses. Typical businesses in this definition are timber yards, construction specialty services, heavy equipment suppliers or building contractors.

commercial, light means an establishment or business that generally has retail or wholesale sales, office uses, or services, which do not generate noise or other impacts considered incompatible with less intense uses. Typical businesses in this definition are retail stores, offices, catering services or restaurants.

commercial centre, neighbourhood means a completely planned and designed commercial development providing for the sale of general merchandise and/or convenience goods and services. A community commercial center shall provide for the sale of general merchandise, and may include a variety store, discount store or supermarket.

commercial centre, convenience means a completely planned and designed commercial development providing for the sale of general merchandise and/or convenience goods and services. A convenience commercial center shall provide a small cluster of convenience shops or services.

commercial centre, township means a completely planned and designed commercial development providing for the sale of general merchandise and/or convenience goods and services. A neighborhood commercial center shall provide for the sales of convenience goods and services, with a supermarket as the principal tenant.

commercial centre, regional means a completely planned and designed commercial development providing for the sale of general merchandise and/or convenience goods and services. A regional center shall provide for

the sale of general merchandise, apparel, furniture, home furnishings, and other retail sales and services, in full depth and variety.

commercial retail means establishments that engage in the sale of general retail goods and services. Businesses within this definition include those that conduct sales and storage entirely within an enclosed structure (with the exception of occasional outdoor footpath promotions); businesses specializing in the sale of either general merchandise or convenience goods.

congregage residence means any building or portion thereof that contains facilities for living, sleeping and sanitation as required by these regulations, and may include facilities for eating and cooking for occupancy by other than a family. A congregate residence shall be permitted to be a shelter, convent, dormitory, or dharmashala, but does not include jails, hospitals, nursing homes, hotels or lodging houses.

court means a space, open and unobstructed to the sky, located at or above grade level on a lot and bounded on three or more sides by walls of a building.

day care means the keeping for care and/or instruction, whether or not for compensation, of two or more children at any one time. Child nurseries, preschools and adult care facilities are included in this definition.

dwelling unit density means the number of dwelling units that are allowed on an area of land, which area of land shall be permitted to include dedicated streets contained within the development.

driveway means a private access road, the use of that is limited to persons residing, employed, or otherwise using or visiting the parcel in which it is located.

dwelling, multiple unit means a building or portion thereof designed for occupancy upto four families living independently in which they may or may not share common entrances and/or other spaces. Individual dwelling units may be owned or offered for rent.

dwelling, single famly means a detached dwelling unit with a single kitchen and sleeping facilities, designed for occupancy by one family.

face of building, primary means the wall of a building fronting on a street or right-of-way, excluding any appurtenances such as projecting fins, columns, pilasters, canopies, marquees, showcases or decorations.

floor area, gross or GFA means the sum of the gross horizontal areas of all the floors of a building, measured from the exterior face of exterior walls or mid-point of common or party walls. The "floor area" of a building shall include basement floor area (except Parking), staircase blocks, planter boxes and ledges, public areas such as landings, and common lobbies. It shall exclude floor area used for parking facilities. Basements not utilized for any habitable or commercial purposes shall be exempt from gross floor area calculations. M&E floors with 1.5m or less headroom can be excluded from gross floor area computation.

Bay Window areas are excluded from the GFA Calculation, subject to the condition that all the Balcony and Bay Window area does not exceed 10% of overall GFA quantum of the building

Lift shafts and service ducts including the thickness of the walls are counted as GFA once at the ground storey level.

Any existing building not affected by the new development should clearly be stated in the existing gross floor area. Calculations of gross floor area for any development shall include the GFA of all existing developments within the plot.

floor area, net means the gross floor area exclu-

sive of vents, shafts, courts, elevators, stairways, exterior walls and similar facilities.

frontage means the width of a lot or parcel abutting a public right-of-way measured at the front property line.

fuel station means that portion of property where flammable or combustible liquids or gases used as fuel are stored and dispensed from fixed equipment into the fuel tanks of motor vehicles. Ancillary activities shall be permitted to include automotive repair and maintenance, car wash service, and food sales. Such an establishment shall be permitted to offer for sale at retail other convenience items as a clearly secondary activity and shall be permitted also to include a free-standing automatic car wash.

garage, private means a building or a portion of a building not more than 100 m2 in area, in which only private or pleasure-type motor vehicles used by the tenants of the building or buildings on the premises are stored or kept.

Global Floor Space Index means the quotient of the ratio of the combined gross covered area (plinth area) on all floors, excepting areas specifically exempted under these Regulations, i.e. "Free of Built-Up Area", to the total area of the respective zoning block.

grade or Adjancent Ground Elevation(AGE) means the lowest point of elevation of the existing surface of the ground, within the area between the building and a line 1.5 m from the building.

group care facility means a facility, required to be permitted by the Government, which provides training, care, supervision, treatment and/or rehabilitation to the aged, disabled, those convicted of crimes, or those suffering the effects of drugs or alcohol; this does not include day care centers, schools, hospitals, jails or prisons.

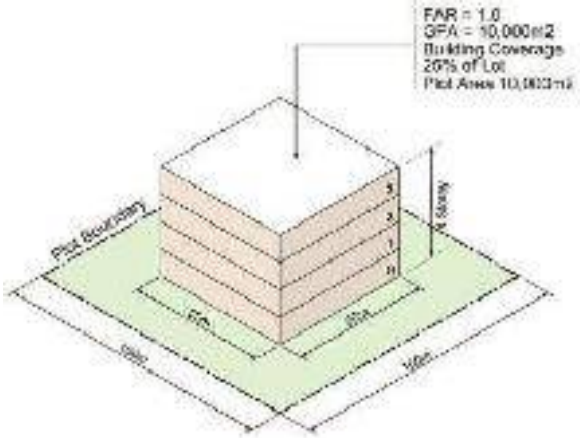
group development means development of residential buildings in a campus or site of 4000 m^2 and above in area, and could be row-houses, semi-detached, detached houses, apartment blocks or mix or combination of the above with customary sub-division of plots and internal roads as required.

guest house A premise providing temporary accommodation for short durations containing less than 6 rooms.

habitable space or room means a space in a structure for living, sleeping, eating or cooking. Bathrooms, toilet compartments, closets, halls, storage or utility space, and similar areas are not considered habitable space.

high-rise buildings means a building with 18m or more in height. However, chimneys, cooling towers, boiling towers, lift machine rooms and other non-working areas in case of industrial buildings and water-tanks and architectural features in respect of other buildings are excluded.

home occupation means the partial use of a dwelling unit for commercial or nonresidential uses by a resident thereof, which is subordinate and incidental to the use of the dwelling for residential purposes.

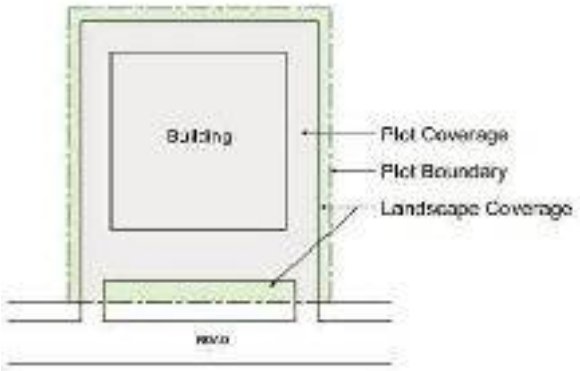


hospital means an institution designed for the diagnosis, treatment and care of human illness or infirmity and providing health services, primarily for inpatients, and including related facilities, laboratories, outpatient departments, training facilities and staff offices.

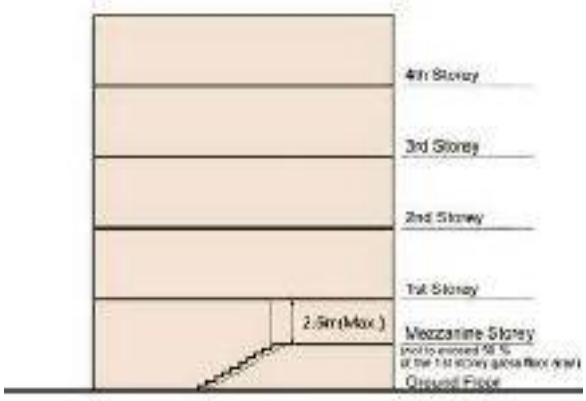
industrial or research park means a tract of land developed according to a development plan for the use of a family of industries and their related commercial uses, and that is of sufficient size and physical improvement to protect surrounding areas and the general community and to ensure a harmonious integration into the neighborhood.

jurisdiction as used in these regulations means the Amaravati Capital City Area notified under the Act.

kitchen means any room or portion of a room within a building designed and intended to be used for the cooking or preparation of food.



green coverage means the percentage of plot area covered by permeable surfaces and meant for aesthetic landscaping and the planting of grass & shrubbery.



landscaping means the finishing and adornment of unpaved yard areas. Materials and treatment generally include naturally growing elements such as grass, trees, shrubs and flowers. This treatment shall be permitted also to include the use of logs, rocks, fountains, water features and contouring of the earth.

livestock includes, but is not limited to, bovine animals, sheep, goats and any other hoofed animals.

lot means a numbered, single parcel of land with predetermined boundaries used for the purpose of identifying the ownership.

mezzanine storey means an intermediate storey between 2 storeys but that is connected only by the storey below it, and which does not occupy more than 50% of the gross floor area of the storey below.

multiplex or multiplex complex shall mean an integrated entertainment and shopping center / complex or a shopping mall and having at least 3 (three) cinema halls / screens. Apart from Cinema halls, the entertainment area may have restaurants, cafeteria, fast food outlets, video games parlours, pubs, bowling alleys, health spa / centers, convention centers and other recreational activities. However, habitable area like hotels, service apartments shall not be allowed in the same block where the multiplexes are set-up and shall be allowed only as a separate block. Such a complex maybe spread

over the site or be in one or more blocks, which maybe highrise buildings or normal buildings.

industry, light means the manufacturing, compounding, processing, assembling, packaging or testing of goods or equipment, including research activities, conducted entirely within an enclosed structure, with no outside storage, serviced by a modest volume of trucks or vans and imposing a negligible impact on the surrounding environment by noise, vibration, smoke, dust or pollutants.

mortuary means an establishment in which the dead are prepared for burial or cremation.

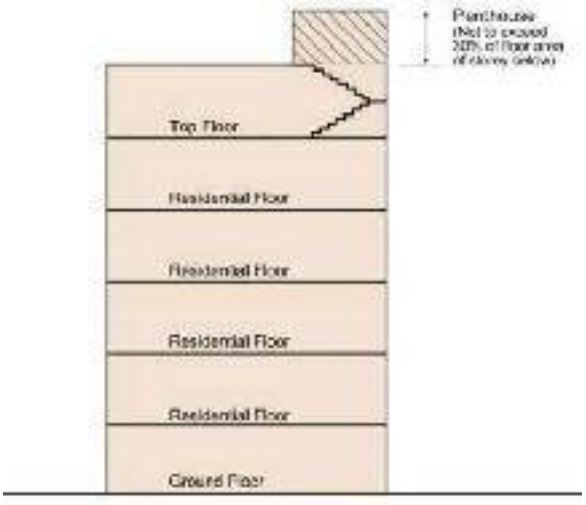
hotel means any building containing six or more guest rooms intended or designed to be used, or which are used, rented or hired out to be occupied, or which are occupied for sleeping purposes by guests.

nonconforming lot means a lot whose width, area or other dimension did not conform to the regulations when these regulations became effective.

nonconforming sign means a sign or sign structure or portion thereof lawfully existing at the time these regulations became effective, which does not now conform.

nonconforming structure means a building or structure or portion thereof lawfully existing at the time these regulations became effective, which was designed, erected or structurally altered for a use that does not conform to the zoning regulations of the zone in which it is located.

nonconforming use See "use, nonconforming"



open space means land areas that are not occupied by buildings, structures, parking areas, streets, alleys or required yards. Open space shall be permitted to be devoted to landscaping, preservation of natural features, patios, and recreational areas and facilities.

park means a public or private area of land, with or without buildings, intended for outdoor active or passive recreational uses.

parking lot means an open area, other than a street, used for the parking of automobiles.

parking space, automobile means a space within a building or private or public parking lot, exclusive of driveways, ramps, columns, office and work areas, for the parking of an automobile.

penthouse means the uppermost storey of a building that is directly connected to, and associated with the use of the storey immediately below it, and which does not occupy more than 30% of the gross floor area of the storey below.

person means a natural person, heirs, executors, administrators or assigns, and includes a firm, partnership or corporation, its or their successors or assigns, or the agent of any of the aforesaid.

Planned Unit Development(PUD) means a residential or commercial development guided by a total design plan in which one or more of the zoning or subdivision regulations, other than use regulations, shall be permitted to be waived or varied to allow flexibility and creativity in site and building design and location, in accordance with

general guidelines. Minimum area required for PUD is 4 Ha.

plot area means the total horizontal area (in square metres) included within the plot boundary lines.

plot coverage means the percentage of a plot area occupied by the ground area of primary and all ancillary buildings, structures and driveways, aisles and parking spaces.

plot plan means a plot of a lot, drawn to scale, showing the actual measurements, the size and location of any existing buildings or buildings to be erected, the location of the lot in relation to abutting streets, and other such information.

pools, swimming, spas :

Above-ground/ on-ground pool See "private swimming pool"

in-ground pool or spa See "private swimming pool"

barrier means a fence, a wall, a building wall, the wall of an above-ground swimming pool or a combination thereof, which completely surrounds the swimming pool and obstructs access to the swimming pool.

power safety cover means a pool cover that is placed over the water area, and is opened and closed with a motorized mechanism activated by a control switch.

private swimming pool means any structure that contains water over 61 cm in depth and which is used, or intended to be used, for swimming or recreational bathing in connection with an occupancy in residential zone and which is available only to the family and guests of the householder. This includes in-ground, above-ground, and on-ground swimming pools and spas.

private swimming pool, indoor means any private swimming pool that is totally contained within a private structure and surrounded on all four sides by walls of said structure.

private swimming pool, outdoor means any private swimming pool that is not an indoor pool.

public swimming pool means any swimming pool other than a private swimming pool.

public facilities means all the publicly accessible uses like recreational spaces, religious, cultural, social, educational and health-related uses.

public services means uses operated by a unit of government to serve public needs, such as police, jail, fire service, ambulance, judicial court or government offices, but not including public utility stations or maintenance facilities.

public utility station means a structure or facility used by a public or quasi-public utility agency to store, distribute, generate electricity, gas, telecommunications, and related equipment, or to pump chemically treated water. This does not include storage or treatment of sewage, solid waste or hazardous waste.

public works/ municipal works means any drainage ditch, storm sewer or drainage facility, sanitary sewer, water main, roadway, parkway, sidewalk, pedestrian way, tree, lawn, off-street parking area, lot improvement, or other facility for which the local government may ultimately assume the responsibility for maintenance and operation, or for which the local government responsibility is established.

public way means any street, alley or similar parcel of land essentially unobstructed from

the ground to the sky, which is deeded, dedicated or otherwise permanently appropriated to the public for public use.

quasi public means essentially a public use, although under private ownership or control.

recreation, indoor means an establishment providing completely enclosed recreation activities. Ancillary uses shall be permitted to include the preparation and serving of food and/or the sale of equipment related to the enclosed uses. Included in this definition shall be roller skating or ice skating, billiards, and related amusements.

recreation, outdoor means an area free of buildings except for restrooms, dressing rooms, equipment storage, maintenance buildings, open-air pavilions and similar structures used primarily for recreational activities.

recycling facility means any location whose primary use is where waste or scrap materials are stored, bought, sold, accumulated, exchanged, packaged, disassembled or handled, including, but not limited to, scrap metals, paper, rags, tires and bottles, and other such materials.

licenced professional means an architect or engineer licensed to practice professional architecture or engineering as defined by statutory requirements of the professional registration laws.

rehabilitation centre means an establishment whose primary purpose is the rehabilitation of per- sons. Such services include drug and alcohol rehabilitation, assistance to emotionally and mentally disturbed persons, and houses for prison parolees and juveniles.

religious and cultural activity means a use or building owned or maintained by organized religious organizations or nonprofit associations for social, civic or philanthropic purposes, or the purpose for which persons regularly assemble for worship.

rennovation means interior or exterior remodeling of a structure, other than ordinary repair.

restaurant means an establishment that sells prepared food for consumption. Restaurants shall be classified as follows:

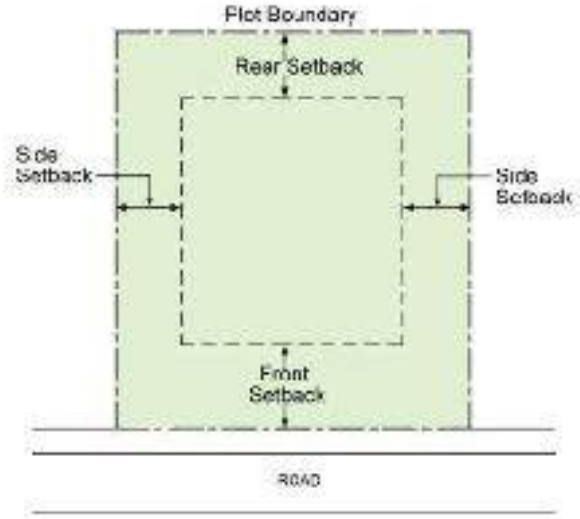
restaurant, fast food means an establishment that sells food already prepared for consumption, packaged in paper, styrofoam or similar materials, and may include drive-in or drive-up facilities for ordering.

restaurant, general means an establishment that sells food for consumption on or off the premises.

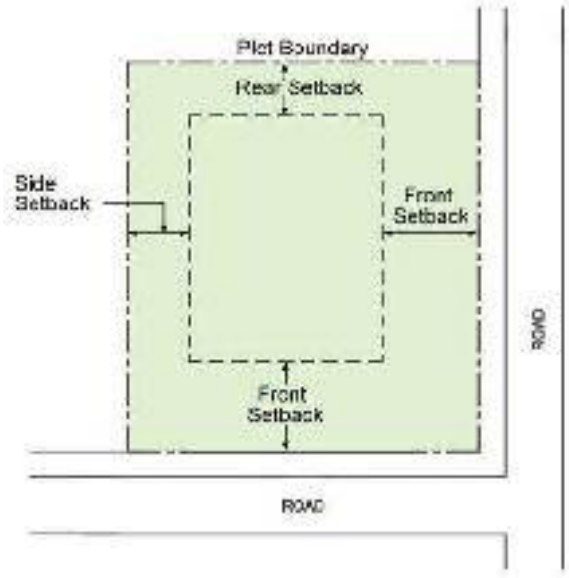
restaurant, take-out means an establishment that sells food only for consumption off the premises.

sanctioning authority means Commissioner, APCRDA or any officer to whom sanctioning powers have been delegated.

school, commercial means a school establishment to provide for the teaching of industrial, clerical, managerial or artistic skills. This definition applies to schools that are owned and operated privately for profit and that do not offer a complete educational curriculum (e.g., beauty school or modeling school).



setback means the minimum required distance between the property line and the building line. It is an open, unoccupied space on a lot, other than a court, which is unobstructed from the ground upward by buildings or structures, except as otherwise provided in these regulations.



setback, front means a setback extending across the full width of the lot, the depth of which is the minimum horizontal distance between the front lot line and a line parallel thereto.

setback, rear means a setback extending across the full width of the lot, the depth of which is the minimum horizontal distance between the rear lot line or ordinary high water line and a line parallel thereto.

setback, side means an open, unoccupied space on the same lot with the building and between the building line and the side lot line, or to the ordinary high water line.

service apartment means a fully furnished apartment available for both short-term as well as long-term stays, providing all the hotel-like amenities. Serviced apartments typically include soft-furnishings and cooking utensils so that long term tenants need not bring their own, and have all the services like housekeeping, front office, parking & others included in the rent. Service Apartments will be applicable to Commercial tax regulations prevailing in Amaravati.

site plan means a plan that outlines the use and development of any tract of land.

storey means that portion of building included between the upper surface of any floor and the upper surface of the floor next above, except that the topmost storey shall be that portion of a building included between the upper surface of the topmost floor and the ceiling or roof above. If the finished floor level directly above a usable or unused under-floor space is more than 1.8 m above grade as defined herein for more than 50 percent of the total perimeter or is more than 3.7 m above grade as defined herein at any point, such usable or unused under-floor space shall be considered as a story.

street means any thoroughfare or public way not less than 6 m in width which has been dedicated.

street, private means a right-of-way or easement in private ownership, not dedicated or maintained as a public street, which affords the principal means of access to two or more sites.

structure means that which is built or constructed, an edifice or building of any kind, or any piece of work artificially built up or composed of parts joined together in some definite manner.

subdivision means the division of a tract, lot or parcel of land into two or more lots, plats, sites or other divisions of land.

theatre or cinema hall means a building used primarily for the presentation of live stage productions, performances or motion pictures.

Transferable Development Rights (TDR) means an award specifying the built up area an owner of a site or plot can sell or dispose or utilize elsewhere, in lieu of surrounding land free of cost which is required to be set apart or affected for public purpose as per the Master Plan or in road widening or covered in recreational use zone, etc. The award is in the form of a TDR Certificate issued by the Commissioner.

use means the activity occurring on a lot or parcel for which land or a building is arranged, designed or intended, or for which land or a building is or may be occupied, including all accessory uses.

use, change of means the change within the classified use of a structure or premise.

use, nonconforming means a use that lawfully occupied a building or land at the time these regulations became effective, which has been lawfully continued and which does not now conform with the use regulations.

use, principal means a use that fulfills a primary function of a household, establishment, institution or other entity.

use, temporary means a use that is authorized by these regulations to be conducted for a fixed period of time. Temporary uses are characterized by such activities as the sale of agricultural products, contractor's offices and equipment sheds, fireworks, carnivals, flea markets, and garage sales.

variance means a deviation from the height, bulk, setback, parking or other dimensional requirements established by these regulations.

warehouse, wholesale or storage means a building or premises in which goods, merchandise or equipment are stored for eventual distribution.

use, permitted means uses that comply with the intended use for the particular zone and can be permitted outright within any particular zoning district. However, the development may have to comply with other context specific additional regulatory restrictions e.g. Urban Design Guidelines, Heritage & Conservation etc.

use, conditional means a use that would become harmonious or compatible with neighbouring uses through the application and maintenance of qualifying conditions.

use, prohibited means uses that are deemed prohibited, and include activities that have been found to be incompatible with the particular zoning district. For example, industrial uses are prohibited within the residential zones.

zoning plan means a combination of (i) zoning map which identifies specific zoning districts within the planning area based on the predominant land use, and (ii) zoning regulations which describe the permitted, prohibited and conditional uses in each zoning district along with the desired intensity, building height, physical layout of buildings, parking, sign regulation, or other physical structures and elements on the land for that zone.

Terms and Expressions which are not defined in these rules shall have the same meaning as in the respective local authorities / APCRDA and as defined in the National Building Code as the case may be, unless the context otherwise requires.

CHAPTER II

PERMIT PROCEDURE

201 COMPLIANCE WITH THE REGULATIONS

201.1 General. Upon adoption of these regulations by the APCRDA, no use, building or structure, whether publicly or privately owned, shall be constructed or authorized until the location and extent thereof conform to said plan.

201.2 Developments prior to these regulations. Lawfully established buildings and uses in existence at the time of the adoption of these regulations shall be permitted to have their existing use or occupancy continued, provided such continued use is not dangerous to life.

201.3 Additions, alterations or repairs. Additions, alterations or repairs shall be permitted to be made to any building or use without requiring the existing building or use to comply with the requirements of these regulations, provided the addition, alteration or repair conforms to that required for a new building or use.

201.4 Maintenance. All buildings or uses, both existing and new, and all parts thereof, shall be maintained. The owner shall be responsible for the maintenance of buildings and parcels of land. To determine compliance with this section, the Commissioner shall be permitted to cause any structure or use to be inspected.

201.5 Moved and temporary buildings, structures, and uses. Buildings or structures moved into or within the jurisdictions shall comply with the provisions of these regulations for new buildings and structures. Temporary buildings, structures and uses such as reviewing stands and other miscellaneous structures, sheds, canopies or fences used for the protection of the public shall be permitted to be erected, provided a special approval is received from the Chief City Planner for a limited period of time. Temporary buildings or structures shall be completely removed upon the expiration of the time limit stated in the permit.

201.6 Illegal uses. Uses that were illegally established prior to the adoption of these regulations shall remain illegal.

202 CHIEF CITY PLANNER

202.1 General. This section establishes the duties and responsibilities of the Chief City Planner and/or designee who shall be referred to hereafter as "Chief City Planner".

202.2 Deputies. The Commissioner may appoint the Chief City Planner and such number of technical officers and other employees from time to time under the Chief City Planner, as may be necessary to carry out the functions of these regulations.

202.3 Issue of permits The Commissioner may from time to time delegate his powers to Chief City Planner and other officials as may be necessary to carry out the functions of these regulations.

202.4 Conditional use permits and variances. The Chief City Planner shall receive all applications for conditional uses and variances or other plans as shall be permitted or approved as required by these regulations, review for completeness and prepare submittals for review by the Commissioner.

202.5 Amendments. All requests for amendments or changes to the master plan or these regulations or zoning map shall be submitted to the Chief City Planner for processing.

202.6 Interpretations. The interpretation and application of the provisions of these regulations shall be by the Chief City Planner. An appeal of an interpretation by the Chief City Planner shall be submitted to the Commissioner who is authorized to interpret these regulations, and

such interpretation shall be considered final.
Uses are permitted within the various zones as described in these regulations and as otherwise provided herein.
It is recognized that all possible uses and variations of uses that might arise cannot reasonably be listed or categorized. Mixed uses/sites or any use not specifically mentioned or about which there is any question shall be administratively classified by comparison with other uses identified in the zones described in these regulations. If the proposed use resembles identified uses in terms of intensity and character, and is consistent with the purpose of these regulations and the individual zone's classification, it shall be considered as a permitted/prohibited use within a general zone classification, subject to the regulations for the use it most nearly resembles. If a use does not resemble other identified allowable uses within a zone, it may be permitted as determined by the Executive Committee as an amendment to these regulations pursuant to Section 205.3

202.7 Liability. The Chief City Planner, or designee, charged with the enforcement of these regulations, acting in good faith and without malice in the discharge of the duties described in these regulations, shall not be personally liable for any damage that may accrue to persons or property as a result of an act or by reason of an act or omission in the discharge of such duties. A suit brought against the Chief City Planner or employee because such act or omission performed by the Chief City Planner or employee in the enforcement of any provision of such regulations or other pertinent laws or rules or standing orders implemented through the enforcement of these regulations or enforced by the enforcement agency shall be defended by the jurisdiction until final termination of such proceedings, and any judgment resulting therefrom shall be assumed by the jurisdiction.
These regulations shall not be construed to relieve from or lessen the responsibility of any person owning, operating or controlling any building or parcel of land for any damages to persons or property caused by defects, nor shall the enforcement agency or its jurisdiction be held as assuming any such liability by reason of the reviews or permits issued under these regulations.

202.8 Cooperation of other officials. The Chief City Planner shall be authorized to request, and shall receive so far as is required in the discharge of the duties described in these regulations, the assistance and cooperation of other officials of the jurisdiction.

203 COMMISSIONER

203.1 General. This section addresses the duties and responsibilities of Commissioner.

203.2 Division of land regulations. It shall be the duty of the Commissioner to develop and adopt regulations governing the division of land. All divisions of land shall be in accordance with the adopted regulations.

203.3 Conditional use permits. It shall be the duty of the commissioner to review conditional use permit applications. The application shall be accompanied by maps, drawings or other documentation in support of the request. The granting of a conditional use permit shall not exempt the applicant from compliance with other relevant provisions of related regulations.

203.4 Official zoning map. APCRDA shall adopt an official zoning map for all areas included within the jurisdiction.

204 EXECUTIVE COMMITTEE (EC)

204.1 General. This section addresses the duties and responsibilities of EC.

204.2 Variances. The EC shall have the power to hear and decide on cases wherein a variance to the terms of these regulations is proposed. Limitations as to the EC's authorization shall be as set forth in these regulations.

204.3 Variance review criteria. The EC shall be permitted to approve, approve with conditions or deny a request for a variance. Each request for a variance shall be consistent with the following criteria:

1. Limitations on the use of the property due to physical, topographical and geologic features.
2. The grant of the variance will not grant any special privilege to the property owner.
3. The applicant can demonstrate that without a variance there can be no reasonable use of the property.
4. The grant of the variance is not based solely on economic reasons.
5. The necessity for the variance was not created by the property owner.
6. The variance requested is the minimum variance necessary to allow reasonable use of the property.
7. The grant of the variance will not be injurious to the public health, safety or welfare.
8. The property subject to the variance request possesses one or more unique characteristics generally not applicable to similarly situated properties.

204.4 Use variance. The EC shall not grant a variance to allow the establishment of a use in a zoning district when such use is prohibited by the provisions of these regulations.

204.5 Decisions. The EC shall be permitted to decide in any manner it sees fit; however, it shall not have the authority to alter or change these regulations or zoning map or allow as a use that which would be inconsistent with the requirements of these regulations. Provided, however, that in interpreting and applying the provisions of these regulations, the requirements shall be deemed to be the spirit and intent of these regulations and do not constitute the granting of a special privilege.

205 HEARINGS, APPEALS AND AMENDMENTS

205.1 Hearings. Upon receipt of an application of appeal or vairance in proper form, the Chief City Planner shall arrange serve a notice stating the nature of the request, the location of the property, and the time and place of hearing. Reasonable effort shall also be made to give notice by regular mail of the time and place of hearing to each surrounding property owner; the extent of the area to be notified shall be set by the Chief City Planner. A notice of such hearing shall be posted in a conspicuous manner on the subject property.

205.2 Appeals. An appeal against a decision by the Chief City Planner shall lie to the Commissioner.

1. Filing. Any person with standing, aggrieved or affected by any decision of the Chief City Planner or Commissioner shall be permitted to appeal to the EC by written request with the Chief City Planner. Upon furnishing the proper information, the Chief City Planner shall transmit all papers and pertinent data related to the appeal.

2. Time limit. An appeal shall only be considered if filed within 10 working days after the cause arises or the appeal shall not be considered. If such an appeal is not made, the decision of Chief City Planner or Commissioner shall be considered final.

3. Stays of proceedings. An appeal stays all proceedings from further action unless there is immediate danger to public health and safety.

205.3 Amendments. These regulations shall be permitted to be amended, but all proposed amendments shall be submitted by the Commissioner for a decision by the Authority.

206 VIOLATIONS

206.1 Unlawful acts. It shall be unlawful for any person to erect, construct, enlarge, alter, repair, move, improve, remove, convert or demolish, equip, use, occupy, or maintain any building or land or cause or permit the same to be done in violation of these regulations. When any building or parcel of land regulated by these regulations is being used contrary to these regulations, the Chief City Planner shall order such use discontinued and the structure, parcel of land, or portion thereof, vacated by notice served on any person causing such use to be continued. Such person shall discontinue the use within the time prescribed by the Chief City Planner after receipt of such notice to make the structure, parcel of land, or portion thereof, comply with the requirements of these regulations.

207 DEVELOPMENT PERMITS

207.1 General. All departments, officials and employees which are charged with the duty or authority to issue permits or approvals shall issue no permit or approval for uses or purposes where the same would be in conflict with these regulations. Any permit or approval, if issued in conflict with these regulations, shall be null and void.

207.2 Development Permission Order. Development Permission Order(DPO) issued by the Commissioner under section 108(1) & 110 of the Act shall be mandatory for any development. No such order shall be necessary for activities exempted under section 108(3).

1. The Commissioner shall, within 60 days from the date of application or from the date of applicant making compliances, by an order in writing, either
   (i) Grant the permission, unconditionally or subject to certain general and special conditions, in the form of a CC and approve the plans or
   (ii) Refuse the permission if the proposal in not in conformity with these Regulations and / or any other Law / Regulations as may be applicable.
2. The DPO shall be issued only after all fees, deposits and charges on the application are paid.
3. The DPO shall remain valid as stipulated under section 111 of the Act and any application for the revalidation shall be accompanied with the fees prescribed.
4. For the purposes of this Regulation, commencement shall mean as under-
   (a) For a building work including additions and alterations: upto plinth level;
   (b) For bridges and overhead tanks: foundation and construction work upto the basement floor;
   (c) For underground works: foundation and construction work up to under-ground floor;
   (d) For lay-out, sub-division and amalgamation proposals: final demarcation and provision of infrastructure and services upto the following stages-
   (i) Roads: Water bound macadam
   (ii) Walkways: Excavation and base layer completed
   (iii) Sewerage: Excavation done and sewer pipe lines brought on site
   (iv) Storm water drainage: Excavation done and pipe lines brought on site
   (v) Water supply: Excavation done and pipe lines brought on site.

207.3 Validity Period. Each permit or approval issued shall expire after the period specified under section 111 of the Act if no work is undertaken or such use or activity is not established, unless a different time of issuance of the permit is allowed in these regulations, or unless an extension is granted by the issuing agency prior to expiration.
Failure to comply fully with the terms of any permit or approval shall be permitted to be grounds for cancellation or revocation. Action to cancel

any license, permit or approval shall be taken on proper grounds by the Chief City Planner. Cancellation of a permit or approval shall be permitted to be appealed in the same manner as its original action.

207.4 Permissions prior to these Regulations. In cases where development permissions were issued before the date of commencement of these Regulations, but the development has not started within a year from the date of such permission, the said development permission shall be deemed to have lapsed.

207.5 Developments started prior to these Regulations. For partially completed works, started with due permission before these Regulation have come into force, the Commissioner may not for reasons to be recorded in writing, necessarily insist on compliance with the provisions of these Regulations for extending the period of the development permission, which shall not exceed the period specified in said permit.

207.6 Unauthorized Development or Use. Any person who contravenes any of the provisions of these Regulations or any requirements or obligations imposed on him by virtue of these Regulations including the maintenance of fire protection services and appliances and lifts in working order or who interferes with or obstructs any person in the discharge of his duties shall be liable to be prosecuted for an offence under section 114, 116, 139 and 207.6 of the Act or any other provisions of the Act.
The Commissioner or an officer authorized by him may further -

(i) Take suitable actions including stoppage, demolition, removal, sealing and recovery of expenses of unauthorized development under sections 115, 116 and 117 of the Act;

(ii) Take suitable action against the licensed technical personnel which may include cancellation of the license and debarring such personnel from further practice for a specified period; and

(iii) Prosecute the owner and/or persons engaged in such act of unauthorized development under sections 114, 116 and 139 of the Act or any other provision of the Act.

207.7 Validity of licenses, permits and approvals. For the issuance of any permit or approval for which the Commissioner is responsible, the Chief City Planner shall require that the development or use in question proceed only in accordance with the terms of such permit or approval, including any requirements or conditions established as a condition of issuance. Except as specifically provided for in these regulations and conditions of approval, the securing of one required review or approval shall not exempt the recipient from the necessity of securing any other required review or approval.

208 APPLICATION FOR DEVELOPMENT

208.1 Application. Every person who intends to carry out development or erect, re-erect or make alterations in any place in a building or demolish any building shall make an application in prescribed form along with fees, documents, excluding for proposals of amalgamation or subdivision of holding, giving full details of the proposed development, by engaging the services of licenced personnel. One set of such plans shall be retained with Chief City Planner for record after the issue development permission order or its refusal.

208.2 Size, Colour and Dimensions. The size of drawing sheets shall be any of those specified in Table 1.
The plan shall be coloured as specified in table 3 and prints of plan shall be on one side of paper only. Existing work should be hatched black and for land development / sub-division / lay-out suitable colour notation shall be used with indexing.
All dimensions in drawings shall be in metric system. In addition to above applicants shall submit the above information in computer readable form or as prescribed by Commissioner from time to time.

Table 1: Drawing sheet sizes

Sno	Designation	Trimmed size (mm)
1	AO	841 x 1189
2	A1	594 x 841
3	A2	420 x 594
4	A3	297 x 420
5	A4	210 x 297
6	A5	148 x 210

Table 3: Colour notation for plans

Sno	Item	Site plan	Building Plan
1	Plot lines	Thick black	Thick black
2	Existing street	Green	
3	Future street	Green dotted	
4	Permissible building	Thick dotted black	
5	Open space	No colour	No colour
6	Work proposed to be demolished	Yellow hatched	Yellow hatched
7	Proposed work	Red filled in	Red filled in
8	Drainage and sewerage work	Red dotted	Red dotted
9	Water supply work	Blue dotted thin	Blue dotted thin
10	Deviations	Red hatched	Red hatched
11	Recreation ground	Green wash	Green wash
12	Roads and setbacks	Burnt sienna	Burnt sienna
13	Reservation	Appropriate colour code	Appropriate colour code

209 APPLICATION DETAILS

209.1 General. The application shall be accompanied by the information as prescribed below in the manner prescribed by the Commissioner.
(i) Copies of plans and statements ;
(ii) The key (location) plan;
(iii) The site plan;
(iv) Sub-division layout plan/plan for amalgamation where the property comprises of two or more different lands belonging to the owner or different owners;
(v) Building plan;
(vi) Service plan;
(vii) Specification and certificate of supervision;
(viii) Documents for proving ownership title;

(ix) An attested copy of clearance certificate from APCRDA for payment of tax arrears where applicable;
(x) Appointment of licenced professional in the prescribed Performa; (xi) Latest surveyed plan of the land showing all details of structures, shrubs, trees etc. as per actual survey carried out by the licenced professional, mentioning dimensions of all sides of land under project;
(xii) In the case of land leased by the APCRDA or allotted by the APCRDA conditionally, clearance of APCRDA regarding observance of the conditions shall be obtained and attached to the application for development permission in respect of such land;
(xiii) Clearances from agencies such as Railways, Civil Aviation, Electricity Distribution Company, EIA as required under EIA notification, the District Magistrate, Special Officer (ULC), Fire Authority and such other agencies, if required, as may be specified from time to time; (xii) Clearance from Airports Authority of India if required; and
(xiii) Challan of payment of development permission fee as prescribed.
The plans to be sent with the application may be ordinary prints on ferro paper or of any other type as prescribed.

209.2 Plans and statements. Normally four sets / copies of plans and statements shall be submitted along with the application.

209.3 Key plan/location plan. A key plan drawn to a scale of not less that 1:10000 shall be submitted along with the application for development permission showing the boundary location of the site with respect to neighbourhood landmarks.

209.4 Site plan. The site plan to be attached with the application shall be drawn to a scale of 1:500 and shall show:

(a) The boundaries of the site and of any contiguous land belonging to the owner thereof;

(b) The position of the site in relation to neighboring street;

(c) The name of the street in which the building is proposed to be situated, if any;

(d) All existing buildings standing on over or under the site;

(e) The position of the building and of all other buildings (if any) which the applicant intends to erect upon his contiguous land referred to at 'a' above in relation to -
i. The boundaries of the site and where the site has been partitioned the boundaries of the portion owned by the applicant and of the portions owned by others,
ii. All adjacent streets buildings (with number of storeys, height and use) and premises within a distance of 12 m of the site and of the contiguous land (if any) referred to in 'a' above, and
iii. If there is no street within a distance of 12 m of the site the nearest existing street;

(f) The means of access from the street to the building (if any) which the applicant intends to erect upon his contiguous land referred to in 'a' above;

(g) Space to be left around the building to secure a free circulation of air, admission of light and access for scavenging purposes;

(h) The width of the street (if any) in front and of the street (if any) at the side or near the building;

(i) The direction of north line relative to the plan of the buildings;

(j) Any existing physical features, such as wells, drains, and trees;

(k) The ground area of the whole property and the breakup of covered area on each floor with the calculations for percentage covered in each floor in terms of the total area of the plot as required under these Regulations governing the coverage of area;

(l) Overhead, electric supply line, water supply and drainage line;

(m) Such other particulars as may be prescribed time to time by the Commissioner.

209.5 Site development and/or sub-division. (1) The application shall be accompanied by the sub-division, layout or amalgamation plan if any, which shall be drawn to a scale of 1:500, containing the following-
(a) Measurement plan/City Survey Map;
(b) Scale used and the North point;
(c) The location of all proposed and existing roads with their names, existing / proposed / prescribed width within the land;
(d) The location of drains, sewers, public facilities and services such as electric lines and so on;
(e) location and areas of reservations, proposed in the development plan, if any, the regular lines of street prescribed under the relevant sets, if any, the public amenity sites prescribed, if any, and the recreational open spaces prescribed if any.
(f) A statement indicating the total area of the holding, the plot wise areas of various uses / occupancies, total area under roads and various reservations proposed in the development plan, if any, the regular lines of street prescribed under the relevant Act, if any, the public amenity sites and the recreational open spaces prescribed if any along with their percentage with reference to the total area of the site proposed to be subdivided.
(g) Dimensions of all plots sub-plots, if any, proposed to be carved out broad use / occupancy proposed therein, along with building lines, the setbacks with dimensions within each plot. In the case of composite development involving no sub-division of the property, dimensions of all buildings showing setbacks and distances between the buildings, light receiving planes and height of various parts of the buildings and the open marginal spaces ;
(h) The FSI if any, assigned to each sub plot; and
(i) In the case of plots in built-up areas, in addition to the above, the means of access to the holding from existing streets.
(j) No plotted development shall be permitted if the road widths are less than 12m.

209.6 Building plans. The plans of the building, its elevations and section to be sent with the application shall be drawn to a scale of 1:100. The building plan shall -
(a) include floor plans of all floors together with the covered areas clearly indicating the sizes of rooms, the position and width of staircases, ramps and other exit ways, which shall show :-
(i) Lift wells, lift machine room and lift pit details;
(ii) Ground and all other floor plan details including those of basement;
(iii) Electric sub-station and meter room details (if any);
(iv) Details of parking spaces, loading and unloading spaces provided around and within building, access ways and appurtenant open spaces with projections in dotted lines;
(v) Distance from any building existing on the plot in figured dimensions along with accessory building; and
(vi) Such other details as prescribed from time to time by the Commissioner;
(b) show the use or occupancy of all parts of the building;
(c) show exact location of essential services such water closet, sink, bath and the like;
(d) include sectional drawings showing clearly the size of the footings, thickness of basement wall, wall constructed size and spacing of framing members, floors slabs, roof slabs with the materials. The section shall indicate the height of building, rooms and the height of the parapet; and the drainage and the slope of the roof. At least one section should be taken through the staircase provided further that the structural plan giving details of all structural elements and materials used along with structural calculations shall be submitted separately but under any circumstances before the issue of the building permit or commencement certificate;
(e) show all street elevations;
(f) indicate details of basket privy (served privy) if any;
(g) give dimensions of the projected portion beyond the permissible building line;
(h) include terrace plan indicating the drainage

and the slope of the roof;
(i) give indication of the north line relative to the plan;
(j) give dimensions and details of doors, windows and ventilators;
(k) give such other particulars as may be prescribed by the Commissioner.

209.7 Plans for multi-storied / special buildings. For buildings of more than 15m height for commercial business purpose, 18m and above height for residential height and buildings of public congregation like schools, cinema halls, function halls, religious place which are more than $500m^2$ in plot area or 6m and above in height shall submit no objection certificate issued by sanctioning authority under the relevant law. The following additional information shall be furnished in the building plans in addition to the items (a) to (k) of Regulation 209.6 namely:
(a) Access to fire appliances/vehicles with details of vehicular turning circle and clear motorable access way around the building;
(b) Size (width) of main and alternate staircases along with balcony approach, corridor ventilated lobby approach;
(c) Location and details of lift enclosures;
(d) Location and size of fire lift;
(e) Smoke stop lobby/door where provided;
(f) Refuse chutes refuse chamber and service duct,
(g) Vehicular parking spaces and loading and unloading spaces;
(h) Refuse area, if any;
(i) details of building services i.e. air-conditioning system with position of fire dampers, mechanical ventilation system, electrical services, boilers, gas pipes and such other devices;
(j) Details of exits including provision of ramps for hospitals and special risks;
(k) Location of generator, transformer and switch gear room;
(l) Smoke exhauster system, if any;
(m) Details of fire alarm system net work;
(n) Location of centralized control connecting all fire alarm systems built in fire protection arrangements and public address systems;
(o) Location and dimensions of static water storage tank and pump room along with fire service inlets for mobile pump and water storage tank;
(p) Location and details of fixed fire protections installations such as sprinklers, wet risers hose cells, drenches and CO2 installation and;
(q) Location and details of first aid firefighting equipment/installations.

209.8 Design brief. Development proposals of lands exceeding 2000 m^2 in residential zone, commercial zone and industrial zone envisaging development of not less than 1/5th portion of the plot shall be accompanied by a design brief formulated in accordance with the guidelines issued by Commissioner.

209.9 Specifications. The specifications of the proposed construction, giving the type and grade of materials to be used, to be sent with the application shall be duly signed by a licenced professional.

209.10 Service plan. Plans and sectional elevations of private water supply, sewage disposal system and details of building services, where required by the Commissioner, shall be made available on a scale not less than 1:100 before undertaking development.

209.11 Certificate of supervision. The certificate of supervision to be sent with the application shall be in the form prescribed by the Commissioner and shall be duly signed by the licensed professional. In the event of the said licensed professional ceasing to be employed for the development work, further development work shall stand suspended till a new licensed technical personnel is appointed and his certificate of supervision along with a certificate for the previous work erected is accepted by the Commissioner.

209.12 Ownership details. The documents for proving ownership title to be attached with the application shall be the following:

(i) attested copy of the Land Pooling Ownership Certificate issued by APCRDA or in case of land outside land pooling equivalent document in support of ownership.

(ii) Statement of area of the holding by triangulation method from licensed professional with an affidavit from the owner in regard to the area in prescribed form; and

(iii) Any other document prescribed.

209.13 Fire clearance. Plans of buildings requiring fire clearance shall be accompanied by a clearance from the Competent Fire Authority.

209.14 Signing the application. All the plans shall be duly signed by the owner or constituted attorney of the owner and the licenced professionals and shall indicate their names, addresses and license numbers if any, allotted by the Commissioner.

210 FEES, DEPOSITS AND CHARGES

210.1 Application fee. The application shall be accompanied by an attested copy of receipt of payment of development permission application fee. The rate of fees for scrutiny of development proposal shall be as notified from time to time by APCRDA. The gross floor area shall be taken as the basis for calculation of fees including the basement floor and accessory buildings but excluding parting area.

210.2 Exemption from development permission fee. For special housing schemes for economically weaker sections, low income group and slum clearance redevelopment schemes undertaken by public agencies or subsidized by State Government with carpet area of a tenement of not more than 50 m^2 no development permission fee is chargeable.

210.3 Fee refund. In case a proposal is rejected, the initial fee paid for scrutiny of application shall be forfeited.

210.4 Mortgage. To ensure compliance with these Regulations and the directions given in the sanctioned plan and other conditions, ten percentage of the gross floor area shall be mortgaged to APCRDA through a registered mortgage deed. Mortgage shall be released upon issue of occupancy certificate by the Commissioner.

210.5 Development charges. The applicant shall pay fee and charges for obtaining development permissions. In addition to this, wherever FSI exceeds 1.75, applicant has to pay Impact fee as levied by APCRDA from time to time.

211 ENVIRONMENTALLY SENSITIVE DEVELOPMENTS

211.1 Environmental Clearance. Any person who intends to carry out any development which requires Environmental Clearance from the appropriate authority shall submit the same along with the application.

211.2 Quarrying. In case of application for quarrying, an excavation and restoration plan prepared in accordance with the prescribed guidelines as amended from time to time by the Sanctioning Authority shall be submitted along with an undertaking to observe all necessary care and precaution during quarrying operation.

212 DECISION ON APPLICATION

212.1 Sanction or refusal. The Commissioner may either sanction or refuse to sanction the plans and specifications or may sanction them with such modifications or directions as he may deem necessary. The sanction or refusal shall be communicated to the applicant in the prescribed form.

212.2 Service Level Agreement. If the Commissioner does not communicate its decision either to grant or to refuse permission to the applicant within 60 days from the date of receipt of his application or from the date of receipt of the reply from the applicant in respect of any requisition made by the Commissioner, whichever is later, a penalty of Rs.10,000 shall be levied on each of the staff of APCRDA responsible for the delay and such amount be paid to the applicant.

212.3 Modification of plans. A plan shall be scrutinized and all objections thereof shall be pointed out to the applicant at one go. After the applicant complies with the objections raised and submits a modified plan no new objection shall generally be raised after compliance of earlier objections. The re-submitted application shall be scrutinized and if there be further objections, the plan shall be rejected.

212.4 Extension of period. Any extension of the period of permission sought for under section 111 of the Act shall be subject to development plan provisions and these Regulations as in force on the date on which such extension is applied for.

212.5 Revoking of development permission. Without prejudice to the power of revocation conferred by section 113 of the Act, the Commissioner may revoke any development permission issued under the provisions of these Regulations, wherever there has been any false statement or any misrepresentation of material fact in the application on which the development permission was based, and in such cases the development shall be treated as unauthorised. In the case of revocation of permission based on false statements or any material misrepresentation of fact in the application, no compensation shall be payable and fee paid shall be forfeited.

212.6 Responsiblity of applicants and licenced professionals. Neither the granting of the development permission or the approval of the drawings and specifications, nor the inspections made by the Sanctioning Authority during development shall, in any way, relieve the licenced professional or developer from full responsibility for carrying out the development in accordance with these Regulations.

213 PROCEDURE DURING DEVELOPMENT

213.1 Intimation of commencement. (i) The owner shall within one year from the date of issue of development permission order commence the development. The owner shall mark on building site the line-out of the proposed development work i.e. centre lines of all external walls / columns proposed on ground floor of the structure. He shall then give notice to Commissioner of the intention to start work on the building site in the prescribed form. The Commissioner within 7 days of the receipt of such notice shall check the lineout. The owner may anytime after seven days have elapsed from the date of service of such notice to the Commissioner or earlier if permitted by the Commissioner commence the work.
(ii) Neither the granting of permission nor approval of the drawings and specifications, nor inspections made by the Commissioner during erection of the building, shall in any way relieve the owner of such building from full responsibility of carrying out the work in accordance with the requirements of these Regulations.

213.2 Documents at site.

1. Results of tests of materials. Where tests of any materials are made to ensure conformity with the requirements of these Regulations, records of the test data shall be kept available for inspection during the construction of the building and for such a period thereafter as required by the Sanctioning Authority.

2. Approved plans. The person to whom development permission is issued shall, during construction, keep in a conspicuous place on the site in respect of which the permission has been issued, a copy of the commencement certificate along with copies or the approved plans and specifications.

213.3 Safety measures at site. Proper care to avoid risk and injury to persons working on site and passers-by shall be taken by owner / applicant.

213.4 Deviations during construction If during the construction of a building any departure from the sanctioned plan is intended to be

made by way of internal alternations or external additions which violate any provisions regarding general building requirements, structural stability or fire safety requirements of these Regulations, sanction of the Commissioner shall be obtained. Any work carried out in contravention of the sanctioned plan, without prior approval of the Commissioner shall be deemed to be unauthorized. The Commissioner shall take appropriate action as per the Act in such cases.

213.5 Completion certificate (i) The owner through the licensed professional who has supervised the construction shall give notice to the Commissioner regarding completion of work described in the development permission. The completion certificate shall be submitted in the prescribed form and shall be accompanied by six sets of completion plan, one of which shall be cloth mounted.
The three sets mentioned above are for following purposes:
(a) Office record;
(b) Owner;
(ii) The licenced professional shall issue a certificate that there is no deviation from the zoning regulations in the prescribed form.
(iii) Issue of completion certificate misrepresenting the facts shall be an offence punishable under section 114 under the Act and such licenced professional shall be black listed permanently.

213.6 Occupancy certificate The Commissioner, on acceptance of the completion certificate, shall sanction an occupation certificate, in the prescribed form within fifteen (15) days from the date of receipt of the completion certificate, after which period it shall be deemed to have been approved for occupation, provided the building has been constructed as per the sanctioned plans. Where the occupation certificate is refused, the reasons for such refusal shall be communicated to the owner.

213.7 Part occupancy certificate. Upon the request of the holder of the development permission, the Commissioner may issue a part occupation certificate for a building or part thereof, before completion of the entire work as per development permission provided sufficient precautionary measures are taken by the holder of the development permission to ensure public safety and health safety. The part occupation certificate shall be given by the Commissioner subject to the Owner indemnifying APCRDA by giving an indemnity in the prescribed form.

213.8 Special buildings. The work of construction of a building having more than 18 m height and other building for which prior clearance is prerequisite, such buildings shall be subject to inspection of the Commissioner or the authorized officer; and unless a clearance regarding completion of the work from the fire protection point of view is given, no occupation certificate shall be issued in respect of such building.

213.9 Mortgage Mortgage through registered deed by the applicant while obtaining development permit shall be released after the applicant obtains occupancy certificate for the entire development work.

213.10 Demolition of dilapidated structures All unsafe buildings shall be considered to constitute a danger to public safety, hygiene and sanitation and shall be restored by repairs or demolished or dealt with as otherwise directed by the Commissioner.

213.11 Repairs to structures affected by reservations In case of permission for carrying out repairs only for the maintenance of the authorised structures affected by road reservations, the Commissioner may grant such repair permission on specified conditions on case to case basis as deemed fit.

213.12 Inspection

1. Inspection at various stages. The Commissioner may at any time during erection of a building or the execution of any work or development make an inspection thereof without giving previous notice of his intention so to do.

2. Clearance by fire department. For high-rise and special buildings, the sanctioning authority shall issue the occupancy certificate only after fire clearance.

213.13 Permission for temporary structures (i) The Commissioner may grant permission for temporary construction for the following purposes for a period not exceeding six months at a time but not exceeding a period of three years in the aggregate:
(a) Structures for protection from the rain or covering of the terraces during the monsoons only;
(b) Pandals for fairs, ceremonies, religious functions, sale of crackers, seasonal goods etc.;
(c) Structures for exhibitions/circuses etc. ;
(d) Structures for ancillary works for quarrying operations in conforming zones;
(e) Structures for godowns/storage of construction materials within the site;
(f) Temporary site office and watchmen chowkies within the site only during the phase of construction of the main building;
(g) Structures for storage of machinery, before installation, for factories in Industrial lands within the site ;
(h) Transit accommodation for persons to be rehabilitated in the new construction;
(i) Structures for educational and medical facilities within the site of the proposed building during the phase of planning and constructing the said permanent buildings;
(j) Structures for Ready Mix Concrete in or adjacent to building site;
(k) Asphalt mixing plant for a period not exceeding 15 days at a stretch subject to a maximum limit of 60 days in a calendar year;
(l) Milk booths and telephone booths within building site.
(ii) Provided that temporary constructions for structures mentioned in (e) to (j) may be permitted to be continued temporarily but in any case not beyond completion of construction of the main structure or building.
(iii) Applications of permissions for temporary constructions need not be submitted through a licenced professional. A scrutiny fee shall be paid as specified by APCRDA from time to time along with the application.

214 CONDITIONAL USES

214.1 Conditional-use permit. A conditional-use permit shall be obtained for certain uses, which would become harmonious or compatible with neighboring uses through the application and maintenance of qualifying conditions and located in specific locations within a zone, but shall not be allowed under the general conditions of the zone as stated in these regulations.

214.2 Determination The Commissioner, shall have the authority to impose conditions and safeguards as deemed necessary to protect and enhance the health, safety and welfare of the surrounding area. The authorization of a conditional-use permit shall not be made unless the evidence presented is such to establish:
1. That such use will not, under the specific circumstances of the particular case, be detrimental to the health, safety or general welfare of the surrounding area and that the proposed use is necessary or desirable and provides a service or facility that contributes to the general well being of the surrounding area.
2. That such use will comply with the regulations for such use.
3. The Commissioner shall itemize, describe or justify, then have recorded and filed in writing, the conditions imposed on the use.

214.3 Expiration and Revocation A conditional-use permit shall be considered exercised when the use has been established or when a building permit has been issued and substantial construction accomplished. When such permit is abandoned or discontinued for a period of 1 year, it shall not be reestablished, unless authorized by the commissioner.
A conditional-use permit shall be revoked when the applicant fails to comply with conditions imposed by the commissioner.

214.4 Amendments An amendment to an approved conditional use permit shall be submitted to the Chief City Planner accompanied by supporting information. The Commissioner shall review the amendment and shall permit to grant, deny or amend such amendment and impose conditions deemed necessary.

215 TDR / CONCESSIONS IN ROAD WIDENING CASES

215.1 General

1. Where any land or site or premises for building is affected in the Statutory Plan / Master Plan Road or Circulation ne twork or a road required to be widened as per Road Development Plan, such area so affected in the road or circulation network shall be surrendered free of cost to the Sanctioning Authority by the owner of land. No development permission shall be given unless this condition is complied with.

2. Upon surrendering such affected area the owner of the site would be entitled to a Transferable Development Right (TDR).
   OR
   The owner shall be allowed to construct an extra floor with an equivalent built area for the area surrendered subj ect to mandated public safety requirements.
   OR
   The owner shall be allowed to avail concessions in setbacks including the front set-back (subject to ensuring a building line of 6m in respect of roads 30m and above, 3m in respect of roads 18m and below 30m and 2m in respect of roads less than 18m and subjec t to ensuring minimum side and rear setback of 2m in case of building of height up to 12m and 2.5m in case of buildings of height above 12m and up to 15m and 3m for buildings of height above 15 and up to 18m).

3. The extent of concessions given shall be such that the total built up area after concession shall not exceed the sum of built up area allowed (as proposed) on total area without road widening and b uilt up area equivalent to surrendered area.

4. In case of plots less than 500sq.m in addition to concessions in setbacks and height, the cellar floor may be allowed keeping in view of its feasibility on ground.

5. In case of High Rise Buildings the concessions in setbacks, other than the front setback would be considered subject to maintaining minimum clear setback of 7m on the sides and rear side and such minimum setback area shall be clear without any obstruction s to facilitate movement or fire fighting vehicles and effective firefighting operation.

6. The above concessions shall be considered at the level of Sanctioning Authority. The Sanctioning Authority may consider any other concession as deemed fit with the prior approval of Executive Committee.

215.2 Grant of Transferable Development Right

1. Transferable Development Right" (TDR) can be awarded only when such lands are transferred to the local body / APCRDA as the case may be by way of registered gift deed. The award would be in the form of a TDR certificate issued by the Sanctioning Authority.

2. Grant of TDR can be considered by the Sanctioning Authority for the following areas subject to the owners complying with the conditions of development above, as per the following norms:

   (a) For the Master Plan Road / Road Development Plan undertaken and developed: equivalent to 200% of built up area of such area surrendered. For conservation and development of lakes / water bodies / nalas foreshores &

Recreational buffer development with greenery, etc: equivalent to 100% of built up area of such recreational buffer area developed at his cost.

(b) For Heritage buildings and heritage precincts maintained with adaptive reuse: equivalent to 100% of built up area of such site area.

3. The TDR may be arrived at on the basis of relative land value and equivalent amount in both export and Import areas, as per the Registration Department records. The Sanctioning Authority shall have the discretion in the matter of applicability of TDR. The TDR shall not be allowed in unauthorized buildings / structures / constructions and shall be considered only after the land is vested with the local authority / APCRDA. The TDR certificate issued would be valid or utilized / disposed only within the Amaravati Capital City area and as per guidelines and conditions prescribed.

4. **GUIDELINES ON TRANSFERABLE DEVELOPMENT RIGHT:**
In order to adopt uniform guidelines throughout the Capital City area the following conditions and guidelines are prescribed.

(a) As and when the owner of the building intends to construct the building in the remaining area of the site, he is entitled to construct the building as per the provisions of these Building Rules. In the event the owner doesn't take up any construction, the owner is entitled for TDR which can be used / disposed depending on convenience.

(b) A composite Register shall be maintained by the Sanctioning Authority on the award of TDR and its sale / disposal and utilization. A responsible officer shall be the custodian of the Register.

(c) At the time of sale / disposal / utilization of a particular TDR, the utilization details of the sale / disposal need to be entered at relevant columns in the register and that therefore the relevant file need to be referred to the custodian of the Register for making necessary entries in the register. The custodian is held responsible to enter relevant details in the register and also to enter utilization details in the TDR. When TDR Certificate is sold / utilized totally, the same shall be surrendered by the owners and the custodian shall take possession of the Certificate and make necessary entries in the register. As per Government Orders, TDR award is to be arrived on the basis of relevant land value at both export and import areas as per prevailing Registration value.

(d) TDR can either be sold or can be utilized by the sa me owner depending on convenience.

(e) TDR can be allowed to be utilized for construction of one additional floor over the normal permissible floors without insisting additional setbacks subject to compliance of other norms.

(f) Every TDR sold or disposed shall be accompanied by a prescribed agreement on Rs.l00/ - non-judiciary stamp paper between the person disposing the TDR and the person who intend to utilize the TDR. Agreement would be as per format to be prescribed by the Sanctioning Authority.

5. **DOCUMENTS REQUIRED WITH APPLICATION FOR GRANT OF TRANSFERRABLE DEVELOPMENT RIGHT CERTIFICATE:**
Application to be made by owner in the prescribed format giving the following details:

(a) Name of the owner with clear address, contact phone number, etc.

(b) Copy of the ownership documents along with clear site plan and location plan.

(c) Site Plan showing the land surrendered, its extent, location with dimensions.

(d) Building permission Plan for the site by the urban local body.

(e) Details of Building permission granted / applied for like use or purpose of building, number of floors permitted, all-round setbacks, floor area permitted and utilized, parking area permitted; etc.

(f) Whether already benefit of relaxations been utilized for the site?

(g) Whether any Court case is pending against Urban Local Body?

(h) Land value of the site where TDR is to be availed (latest copy from concerned Sub Registrar to be enclosed)

(i) TDR admissible in terms of sq.m and equivalent land value.

215.3 Compliance by Owner for ensuring Construction is undertaken as per sanctioned plan

1. The owner and builder / developer shall give an Affidavit duly notarized to the effect that in the case of any violation from the sanctioned building plan, the Enforcement Authority can summarily demolish the violated portion.

2. The owner or builder shall give a Declaration duly specifying the number of floors permitted, along with the extent of each floor. In case of any violation with regard to the Declaration, the Enforcement Authority can demolish the violations.

3. Before release of the building sanction by the sanctioning authority, the owner of the plot / site is not only required to produce the Original Land Pooling Ownership Certificate (LPOC), Original Sale Deed, registered under the provisions of the Indian Registration Act, 1908 / Certified copy issued by Stamps and Registration Department for the perusal of the sanctioning authority and cross verification with the attested copy submitted with the building application.

4. The owner is required to hand over 10% of the built-up area in the ground floor or first floor or the second floor, as the case may be, to the sanctioning authority by way of a Notarised Affidavit. In respect of row houses / detached houses / cluster housing 5% of th e units shall be handed over by way of notarized affidavit to the sanctioning authority. The Notarised Affidavit shall be got entered by the sanctioning authority in the Prohibitory Property Watch Register of the Registration Department. Then only the Building sanction will be released.

5. Individual residential buildings in plots up to 200sq.m with height up to 7m are exempted from the above conditions in the R1 zone.

215.4 Occupancy certificate

1. Occupancy Certificate shall be mandatory for all buildings. No person shall occupy or allow any other person to occupy any building or part of a building for any purpose unless such building has been granted an Occupancy Certificate by the Sanctioning Authority. Partial Occupancy Certificate may be considered by the Sanctioning authority on merits i.e. flats / units or area within a complex which have fulfilled all the requirements in addition to basic facilities like lifts water supply, sanitation, drainage, roads, common lighting etc.

2. The owner shall submit a notice of completion through the registered architect and licenced builder / developer along wi th prescribed documents and plans to the Sanctioning Authority. The Sanctioning Authority or the person authorized, on receipt of such notice of completion shall undertake inspection with regard t o the following aspects:

(a) *No. of Floors.
(b) External setbacks.
(c) Usage of the building.
(d) Parking space provision.
(e) Abutting road width

* The total height of the building may vary to a maximum of 1m with no change in the permitted number of floors subject to compliance of fire service norms.

3. The Sanctioning Authority shall communicate the approval or refusal of the Occupancy Certificate within 15days or may issue the same after levying and collecting compounding fee, if any. If the authority fails to issue the occupancy certificate within the above stipulated period the responsibility shall be fixed with the concerned officer who fails to process the file.

4. The Sanctioning Authority is empowered to compound the offence in relation to setbacks violations (other than the front setback) in respect of non high rise buildings only up to 10%, duly recording thereon the violations in writing. The rate of Compounding fee shall be equivalent to one hundred percent of the value of the land as fixed by the Registration Department at the time of compounding for the violated portion and the Government may revise this rate from time to time. Compounding of such violation shall not be considered for buildings constructed without obtaining any sanctioned plan.

5. For all high rise buildings, the work shall be subject to inspection by the Andhra Pradesh State Disasters Response & Fire Services Department and the Occupancy Certificate shall be issued only after clearance from the Andhra Pradesh State Disasters Response & Fire Services Department with regard to Fire Safety and Protection requirements.

6. The sanctioning authority shall ensure that all pub lic and semi public buildings are constructed disable friendly and prov ide facilities for specially enabled persons as per National Building Code -2005 of India while issuing occupancy certificate.

7. The functional/line agencies dealing with electric power, water supply, drainage and sewerage shall not give regular connections to the building unless such Occupancy Certificate is produced, or alternatively may charge 3 times the tariff till such time Occupancy Certificate is produced. This condition shall also be applicable to all unauthorized constructions and buildings constructed without sanctioned building plan. In addition to the above, the Local Body shall collect every ye ar two times the property tax as penalty from the owner / occupier.

8. The Registration Authority shall register only the permitted built up area as per the sanctioned building plan and only upon producing and filing a copy of such sanctioned building plan. On the Registration Document it should be clearly mentioned that the registration is in accordance with the sanctioned building plan in respect of setbacks and number of floors.

9. The financial agencies / institutions shall extend loan facilities only to the permitted built up area as per the sanctioned building plan.

215.5 Enforcement In addition to the enforcement powers and responsibilities given in the respective laws of the local authority, in respect of these Rules:

1. The Enforcement Authority concerned shall be wholly and severally responsible for ensuring and maintaining the right of way / width of the road and building restrictions as given in these Rules.

2. The Enforcement Authority shall summarily remove an y violation or deviation in build-

ing construction in maintaining the road widths and building line.

3. In respect of apartment complexes, shopping complex es and all high rise buildings, periodical inspections shall be carried out indicating the stage of work with reference to sanctioned plan. In case of any deviations from the sanctioned plan, necessary action shall be taken as per rules.

4. Any person who whether at his own instance or at t he instance of any other person or anybody including the Governmen t Department undertakes or carries out construction or development of any and in contravention of the statutory master plan or witho ut permission, approval or sanction or in contravention of any condition subject to which such permission or approval or sanction has been granted shall be punished with imprisonment for a term which may extend to three years, or with fine which may extend to ten percent of the value of land or building including land in question as fixed by the Registration Department at the time of using the land or building. Provided that the fine imposed shall, in no case be less than fifty percent of the said amount.

215.6 Licensing of real estate companies, developers, builders, town planners, engineers & other technical personnel mandatory

1. The Licencing of Real Estate Companies, Developers & Builders shall be in accordance with the rules published by the Authority.

2. The Licencing of Architects, Engineers, Supervisor, Surveyor and Structural Engineer & Town Planners shall be as per rules and regulations published by the Authority.

3. No developer / builder / real estate firm or company / engineer / town planner/other technical personnel shall be allowed to undertake development/do business / practice in a Municipal Corporation / Urban Development Authority / Municipality / Nagar Panchayat Area unless they are licenced with the sanctioning authority of the respective area.

4. Architects shall be required to be registered w ith the Council of Architecture.

5. The engaging of the services of a licenced developer / builder shall be mandatory for Apartment Buildings, Group Development, all High-Rise Buildings and all Commercial Complexes.
   Developments undertaken for construction of individual residential houses, educational/institutional/industrial buildings and developments undertaken by public agencies are exempted from the above condition.

6. Any developer / builder undertaking development or any firm doing property business soliciting property sale/transactions or advertising as such in case of above, shall necessarily mention the details of it's licence number, licence number of the licenced developer to whom the approval is given together with the permit number and it's validity for information and verification of public / prospective buyers.

7. Absence of the above or suppressing of the above facts or in the case of other licences and other technical personnel who violate the conditions would invite penal action including debarring of the real estate firm / development firm / company from practice in the local authority area for 5 years besides prosecution under the relevant laws / code of conduct by the sanctioning authority.

8. Any licenced developer / builder / other technical personnel who undertake construction in violation of the sanctioned plans shall be black- listed and this would entail cancellation of their licence besides being prosecuted under the relevant laws / code of conduct.

215.7 General. A request for a conditional use shall be permitted with conditions or denied. Each request for a conditional use approval shall be consistent with the criteria listed below:

1. The request is consistent with all applicable provisions of the master plan.
2. The request shall not adversely affect adjacent properties.
3. The request is compatible with the existing or allowable uses of adjacent properties.
4. The request can demonstrate that adequate public facilities, including roads, drainage, potable water, sanitary sewer, and police and fire protection exist or will exist to serve the requested use at the time such facilities are needed.
5. The request can demonstrate adequate provision for maintenance of the use and associated structures.
6. The request has minimized, to the degree possible, adverse effects on the natural environment.
7. The request will not create undue traffic congestion.
8. The request will not adversely affect the public health, safety or welfare.
9. The request conforms to all applicable provisions of these regulations.

CHAPTER III

ZONING DISTRICTS AND USE GROUPS

301 CLASSIFICATION OF ZONING DISTRICTS

301.1 Classification. In order to classify, regulate and restrict the locations of uses and locations of buildings designated for specific areas; and to regulate and determine the areas of setbacks, courts and other open spaces within or surrounding such buildings, property is hereby classified into zoning districts (see table 5).

Table 5: Zoning Districts

Zone	Zone code	Zoning District
Residential	R1	Village Planning Zone
	R2	Low density zone
	R3	Medium to High density zone
	R4	High density zone
Commercial	C1	Mixed use zone
	C2	General Commercial zone
	C3	Neighbourhood centre zone
	C4	Town centre zone
	C5	Regional centre zone
	C6	Central Business District zone
Industrial	I1	Business park zone
	I2	Logistics zone
	I3	Non-polluting industry zone
Open Space and Protected area	P1	Passive zone
	P2	Active zone
	P3	Protected zone
Institutional Facilities	S1	Government zone
	S2	Education zone
	S3	Special zone
Infrastructure Reserve	U1	Reserve zone
	U2	Road Reserve zone

302 ZONING MAP

302.1 General. The boundaries of each zoning district are as indicated upon the zoning map (see Annexure). Said map and subsequent amendments thereto shall be considered as a part of this zoning plan.

303 ANNEXED TERRITORY

303.1 Classification. Any territory hereafter annexed shall automatically, upon such annexation, be classified as R2, residential district and be subject to all conditions and regulations applicable to property in such district.

304 CLASSIFICATION OF USES

304.1 Classification. The uses permitted or prohibited in various zoning districts are classified into use groups (see Appendix I). The zoning regulations matrices are in Appendix II. In case of any discrepancies between Appendix II and Appendix III, Appendix II shall prevail.

305 CLASSIFICATION OF REGULATIONS

305.1 General. The regulations for any zone are classified into the following heads and presented as regulation tables for different zones.

(1) Uses- Permitted, Prohibited, and Conditional.

(2) Buildable area- Minimum plot size (m^2), Maximum building coverage (%), Minimum green coverage (%), FSI.

(3) Building type- Height (m), Maximum floors, Floor to floor height (m), Building form, Building dimensions.

(4) Parking- Minimum required parking stalls, Minimum dimensions for different type of vehicles, Location, Surfacing, Disabled parking, Circulation, Minimum shaded areas, and Vehicular access to parking lot..

(5) Setback- All setbacks (Front, Side, Rear, Common, Corner) for above grade/basement/between adjacent buildings.

(6) Service area and equipment- Loading docks, Outdoor storage, Refuse storage area, and Mechanical Equipment.

(7) Fencing- Permission, Electronic security, Plantation along boundary, heights (Rear, Side, Front, Additional), and Material.

(8) Circulation- Pedestrian circulation and Public transit circulation.

(9) Signage- Signage Uses, Location, and Specifications.

(10) Green coverage - Minumum dimensions, Planting strip, Maintenance, and Decks.

305.2 Urban design guidelines Urban design guidelines approved by the Commissioner for any land parcel, confirming to the Masterplan principles, shall have precedence over these zoning regulations.

CHAPTER IV

ZONES DEFINED

401 RESIDENTIAL ZONE

401.1 General. The regulations and guidelines in this section apply to residential uses within the various Residential Zoning Districts in Capital City. Summary of residential zoning district guidelines, with illustrative drawings are provided in Appendix III for easy reference.

401.2 Allowable Intensity. The maximum allowable intensity of residential development is guided by the Floor Area Ratio (FAR) specified in the Zoning Regulations below. The full potential of the FAR may not be achievable because of limitations imposed by site configuration, condition, layout, building setbacks, height, site coverage and the requirements of technical authorities that affect the site.

401.3 Building setbacks. Building setbacks are measured from the site boundary, excluding any strip of land that is required by the state for road or drainage widening requirements. Bay windows, ledges, roof eaves and other minor buildings features which do not significantly increase the building bulk of residential developments could be allowed to encroach into the building setback requirement from the common boundary under certain circumstances.

401.4 General.

401.4.1 Ancillary structures

Swimming pool, electric substation, water tank, air-conditioner condenser, etc. are to be adequately set back.

1. - Height of electric substation shall not exceed 6m (measured up to the springing line).
- Transformers open to the sky should be properly screen off to reduce any noise nuisance.

2. Proposed water tank, water pump (if any) is to be located minimum 1.0m from the common boundaries.

3. Sunken swimming pool in land titled developments need not set back from common boundaries. However, the owner is to take appropriate measures to prevent the splashing of water into the neighbouring property.

4. The setback control is the green buffer requirement based on the predominant use of the development.

5. Air-conditioner condensers and air-conditioning ledges is to be located minimum 2 m from the common boundaries to minimise noise and other nuisance to the neighbouring property. For good class bungalows, minimum 3m setback shall be provided from the common boundaries.

401.4.2 Road categories

Category 1	60m RoW	Major Arterial
Category 2	50m RoW	Arterial
Category 3	50m RoW	Sub-arterial
Category 4 & 5	25m RoW	Collector roads

401.5 R1 Village Planning zone. R1 is a zoning district offering low rise developments within the existing villages. The R1 Zone is intended to offer low rise housing as part of the farming community and complementary public facilities as needed. The purpose is to create good community areas within the villages falling within the capital city. Site Required for maintaining road width as proposed in village development/circulation plan approved by Commissioner shall be handed over to the Authority/local body free of cost for which APCRDA may consider TDR or relaxation for additional built up area of 200%. Apartments may be allowed whereever site has access through a 12 m wide existing road. While permitting buildings in R1 zone, abutting minimum 9m wide road, shall be ensured by the authority. The applicant has to indicate road widths on the site plan to maintain minimum width as

TYPE OF ANCILLARY STRUCTURES	REQUIRED SETBACK FROM THE ROAD	REQUIRED SETBACK FROM THE OTHER BOUNDARY LINE
Electric substation (ESS) – 22KV / 6.6KV (1.5 storey) – 22KV / LV (1.5 storey) – 6.6KV/ LV (1 storey)	5m from Category 1 Road 3-5m from Category 2 Road 3m from Category 3 Road 3m from Category 4 Road 3m from Category 5 Road	2m
Sunken swimming pool	5m from Category 1 Road 3-5m from Category 2 Road 3m from Category 3 Road 3m from Category 4 Road 3m from Category 5 Road	2m
Raised swimming pool -protruding >1m from the ground	minimum of 6m	6m
Toilet, Store room, Outdoor kitchen, Maid's quarter, Guard house, Parking garage, Management Office, First aid room, Display area, Security Facilities etc.	Minimum 1m	Minimum 1m

Table 6: Minimum setbacks for Ancillary structures

prescribed in the area development plan as prepared by CRDA.

401.6 R2 Low Density Zone. The R2 is a zoning district established to develop low density premium residential developments. The Zone allows development of detached, semi detached, attached houses and apartments. This zone is in proximity to the ceremonial axis.

401.7 R3 Medium to High Density Zone. R3 is a zoning district established to allow medium to high density residential developments across the city, and create well planned medium to high density housing complexes with ample open spaces. All the returnable residential land for farmers falls under this zone. To create a medium density zone a variety in the housing types ranging from single to multi-family dwelling types offering higher building coverage and building height have been given to encourage land owners to amalgamate and benefit from the Higher FAR offered by the apartment typology within the zone. This is to facilitate the creation of a well planned medium-density residential neighbourhood with green character.

401.8 R4 High Density Residential Zone. R4 is a zoning district where are multi-family high density housing options planned within the Capital City to provide high-quality public transport oriented lifestyle for those who desire an urban lifestyle with easy access to regional goods and services. This zone is largely planned along the riverfront, and in areas with proximity to the town and regional centres. Communal facilities with generous greening are encouraged to enhance the quality of living in this high density environment.

402 COMMERCIAL ZONE

The regulations and guidelines in this section apply to commercial uses within the various Commercial zones in Capital City. Summary of some commercial zoning district guidelines, with illustrative drawings are provided in Appendix III for easy reference.

402.1 Basement Setbacks. A basement is a sunken structure which does not protrude more than 1m above the ground level on all sides. For basements setbacks depending on varying plot sizes, refer Appendix II.

402.2 Ancillary Structures Setbacks. Swimming pool, electric substation, etc. are to be adequately set back as stated in Table 6. For other structures, refer Appendix II.

402.3 Roof garden or Flat roof Roof garden, if any, should be left uncovered at all times unless otherwise approved by the Commissioner. This is to ensure that no structure is added as it is tantamount to an additional storey in areas where there is storey height restriction; or the allowable development intensity may be exceeded. This treatment is similar for flat roofs.

402.4 C1 Mixed Use Commercial Zone. C1 is a zoning district to be used mainly for mixed residential and commercial purposes, which can have up to 30% GFA used for commercial purpose.

402.5 C2 General Commercial Zone. C2 zoning district includes the commercial land that will be returned to the land owners under the Andhra Pradesh Land Pooling (Formulation and Implementation) Rules, 2015. This zone creates attractive mixed use establishments to foster local businesses.

402.6 C3 Neighbourhood Centre Zone. C3 zoning district creates attractive small mixed use establishments. C2 developments within the Transit Overlay allow for compact mixed use developments with a commercial frontage. Neighbourhood Centres (NCs) located outside the transit overlay are also zoned C3. Such (NCs) provide for small commercial such as banks, local markets, eating establishments and offices, as well as some housing component. A variety of public facilities such as health centres, community halls and post offices etc. are also to be provided within the Neighbourhood Centre to cater to the needs of the surrounding neighbourhood (Approximately 15,000-25,000 population). The Neighbourhood Park is also incorporated as part of the C3 Development. The Neighbourhood Park and the public facilities will consist of 40% of the overall C3 zoned area (To be identified and planned).

402.7 C4 Town Centre Zone. C4 zoning district is an area established to create a medium rise commercial zone within the townships. The purpose is to intensify the land use, while ensuring intimate human scale and a continuous shopping street environment.

402.8 C5 Regional Centre Zone. C5 zoning district is an area established to create a medium rise commercial zone within the Regional centres. The purpose is to intensify the land use, while ensuring intimate human scale and a continuous shopping street environment.

402.9 C6 Central Business District zone. C6 zoning district is an area established to create a high rise commercial zone in the finance city/downtown. The purpose is to intensify the land use, while ensuring intimate human scale and a continuous shopping street environment.

403 INDUSTRIAL ZONE

Summary of zoning district guidelines, with illustrative drawings are provided in Appendix III for easy reference.

403.1 I1 Business Park Zone. I1 zoning district are specifically set aside for non-pollutive industries and businesses that engage in high technology, research and development (R&D), high value added and knowledge intensive activities. The value of the business park zone is between industrial and commercial uses. The two main

features that distinguish business parks from industrial estates are:
(i) The range of permitted uses that are generally nonproduction in nature but are characteristic of high technology research and prototype development.
(ii) The emphasis on landscaping, quality building designs and provision of amenity facilities to reflect the image of the business park.

403.2 I2 Logistics Zone. I2 zoning district consist of predominantly activities related to transport, logistics, goods distribution and storage for regional, national and international transit. Generally, these developments consist of warehouses, loading & unloading bays, open storage facilities and supporting ancillary services with efficient internal vehicular circulation and external multi-modal transport links.

403.3 I3 Non-polluting industry Zone. I3 zoning district are for light manufacturing/industry which are non-polluting.

404 PARKS AND OPEN SPACES ZONE

Summary of zoning district guidelines, with illustrative drawings are provided in Appendix III for easy reference.

404.1 P1 Passive Recreational Zone. P1 zoning districts are districts established to provide recreational and leisure facilities and activities in selected areas that have unique features (including visual corridors, environmentally sensitive areas, buffer areas, or along significant routes). These parks can include recreational commercial or public facilities at the neighbourhood, community, and regional level.

404.2 P2 Active Recreational Zone. P2 zoining district is established to provide parks that offer active recreational and sporting activities. While structures within the parks are allowed, the general character of the Active Recreational Zone should remain as green and recreational.

404.3 P3 Protected Area. P3 zoning districts have been established to conserve and protect the environmentally sensitive areas such as steep slopes and rivers which are rich in nature and biodiversity. These areas are non-developable for other strategic purposes. In the case of highly sensitive areas like forests and rivers the zoning for the protected areas shall supersede.

405 INSTITUTIONAL ZONE

Summary of zoning district guidelines, with illustrative drawings are provided in Appendix III for easy reference.

The regulations and guidelines apply to all developments proposed in the Capital City designated within the special development zones presented in the Zoning Plan.

405.1 S1 Government Zone. S1 zoning district is a special zone for institutions such as State Legislature, Secretariat, High Court of Judicature, Heads of Department offices, Raj Bhawan, Head of Department office, Government of India offices, International missions / Consulates and Government Complex related residential facilities with other allied activities. In order to enhance the strategic location and symbolic value of these projects, Urban Design Proposals shall be prepared addressing the character of public spaces as well as functions of the of government institutions. Design brief for the Urban Design proposal shall follow the essential parameters like site location; major and sub arterial roads as shown in Land use Plan & Zoning Plan. Other elements of the master plan like primary and secondary green network; mass transportation lines and interchanges; number of stipulated public facilities; and other surrounding land uses shall be considered in the Urban Design Proposal for Government Zone. All security measures shall be integrated within the Urban Design Proposal to safeguard Government functioning and at the same time making it an publicly accessible place. All the development guidelines for subsequent Architectural Design Projects shall be stipulated in the

Urban Design Proposal. Zoning regulations for Government Zone are not prescribed for the same purpose.

405.2 S2 Education Zone. S2 zoning district enables the Authority in securing land for strategic institutional projects like University, Colleges, Schools, Hospitals and so on. In order to locate these projects at accessible locations and to ensure that adequate land is reserved for its development, this zone is identified as separate zone. For Campus development projects like Universities, large Hospitals detailed Master plan shall be prepared before constructing the buildings to ensure that allocated land is planned well. For individual land parcels such as schools, stipulated number of students and allied facilities shall be worked out as per government's educational department guidelines or private sector developer requirements as applicable. Development guidelines for all parcels under Education Zone shall be based on above. Zoning regulations for Education Zone are not prescribed for the same purpose.

405.3 S3 Special Zone. S3 zoning district, also known as 'White Sites 'have been allocated to enable the Authority in developing market demand driven necessary urban projects. The "white-site" gives more flexibility in the use of the sites through Authority's land allocation program. Endowed with the switch use options, prospective buyers / developers can respond to the market demand and supply conditions more effectively by instantly adjusting and optimizing the space among different uses available at such time. The prospective buyers / developers could rely on the flexibility granted by the "white" site rules to optimize the development potential of the site in a market with uncertain demand. The successful tenderer / buyer of a white site has the options to develop the site for commercial, residential or hotel use, or a mix of these uses, as well as the rights to choose the quantum and/or the mix of the use when initiating or launching the development with approval from Authority at such time. For the layout plots, in this zone, which are registered prior to the notification date of these regulations, the regulations of R3 (Medium to High density residential) shall be applicable.

406 INFRASTRUCTURE ZONE

Summary of zoning district guidelines, with illustrative drawings are provided in Appendix III for easy reference.

406.1 U1 Reserve Zone. U1 zone to enables the Authority in securing land for Strategic Infrastructure and Transportation projects. It includes large scale transport utilities like Bus Terminal, Metro Depot as well as large scale Infrastructure utilities like Water Treatment Plant, Sewage Treatment Plant, and Electrical Substations etc. These projects are strategically located in order to service the Capital City in proper manner and are marked under this zone to ensure that adequate land is reserved for its development. Development briefs for all the parcels are subjected to detailed infrastructure and transportation related studies that need to be taken up by CRDA in the implementation phase. It will determine the development guidelines for all parcels marked under Reserve Zone. Zoning regulations for Reserve Zone are not prescribed for the same purpose.

406.2 U2 Road Reserve Zone. U2 zone enables the Authority in securing the Right of Way(RoW) to develop Major Arterial road, Arterial, sub-arterial road, and Collector roads. Schematic cross sections of proposed Right of Way and its cross sectional elements shall be referred from the Master plan Report. Apart from the traffic movement the Right of Way shall allow space for tree verge, footpaths, utility corridors, bicycle tracks, bicycle parking shelters, bus shelters, street furniture, lighting, signage; and any other transport and utility structures. Detailed study shall be undertaken to further detail the transport provisions and General Road Guidelines.

CHAPTER V

OTHER REGULATIONS

501 OFF-STREET PARKING

501.1 General. Off-street Parking shall be provided at the time of erection of any main building or at the time such buildings are altered, enlarged, converted or increased in capacity minimum offstreet parking space with adequate provision for ingress and egress by standard-sized vehicles in accordance with the requirements of these regulations.

501.2 Parking space requirements. Parking spaces shall be in accordance with provisions given below.

501.2.1 Required number.

The off-street parking spaces required for each use permitted by these regulations shall not be less than that found in Appendix II, provided that any fractional parking space be computed as a whole space.

501.2.2 Combination of uses.

Where there is a combination of uses on a lot, the required number of parking spaces shall be the sum of that found for each use.

501.2.3 Location of lot.

The parking spaces required by these regulations shall be provided on the same lot.

501.2.4 Accessible spaces.

Accessible parking spaces and passenger loading zones shall be provided in accordance with the building code.

501.3 Parking stall dimension. Parking stall dimensions shall be in accordance provisions given below.

501.3.1 Width.

A minimum width of 2.5 m shall be provided for each parking stall.
Exceptions:
1. The width of a parking stall shall be increased 26 cm for obstructions located on either side of the stall within 4.3 m of the access aisle.

501.3.2 Length.

A minimum length of 5 m shall be provided for each parking stall.
Exceptions:
1. Compact parking stalls shall be permitted to be 5.5 m in length.
2. Parallel parking stalls shall be a minimum 6 m in length.

501.4 Minimum dimensions The following are the minimum dimension for parking:

	Width(m)	Depth(m)
Car Parking	2.5	5
Disabled car parking	4.85	5.5
Lorry Parking	3.5	10
Heavy Vehicle Parking	3.75	10
Ambulance parking	3	9

501.5 Design of parking facilities. The design of parking facilities shall be in accordance with provisions given in this section.

501.5.1 Driveway width.

Every parking facility shall be provided with one or more access driveways, the width of which shall be the following:
1. Private driveways at least 2.8 m.
2. Commercial driveways:
2.1. 3.6 m for one-way enter/exit.

2.2. 5.4 m for two-way enter/ exit.

501.5.2 Driveway and ramp slopes.

The maximum slope of any driveway or ramp shall not exceed 12.5 percent (1 in 8). Transition slopes in driveways and ramps shall be provided in accordance with the standards set by the Chief City Planner.

501.5.3 Stall access.

Each required parking stall shall be individually and easily accessed. No automobile shall be required to back onto any public street or sidewalk to leave any parking stall when such stall serves more than two dwelling units or other than residential uses. All portions of a public lot or garage shall be accessible to other portions thereof without requiring the use of any public street.

501.5.4 Compact-to-standard stall ratio.

The maximum ratio of compact stalls to standard stalls in any parking area shall not exceed 1 to 2.

501.5.5 Screening.

A 9.2 m buffer at the public way shall be provided for all parking areas of five or more parking spaces.

501.5.6 Striping.

All parking stalls shall be striped.
Exception: A private garage or parking area for the exclusive use of a single-family dwelling.

501.5.7 Lighting.

All lights illuminating a parking area shall be designed and located so as to reflect away from any street and adjacent property.

502 FENCING

502.1 General. Fence wall heights in required setbacks shall not exceed those specified under Appendix II.

503 LOCATION OF ANCILLARY BUILDINGS

503.1 General. Ancillary buildings shall occupy the same lot as the main use or building.

503.2 Separation from main building. All accessory buildings shall be separated from the main building by 3 m and from the lot boundary by 1m.

503.3 Private garages. An ancillary building used as a private garage shall be permitted to be located in the rear setback or side setback provided that setbacks are maintained and the structures do not encroach into any recorded easements. The building shall be permitted to be located in the front setback of a sloping lot if the lot has more than a 3 m difference in elevation from midpoint of the front lot line to a point 16 m away midway between the side lot lines.

503.4 Storage buildings. All ancillary buildings used for storage or other similar use shall be permitted to be located in any portion of the rear setback or side setback. No storage building shall be located in the front setback.

504 ALLOWABLE PROJECTIONS INTO SETBACKS

504.1 General. Eaves, cornices or other similar architectural features shall be permitted to project into a required setback no more than 30 cm. Chimneys shall be permitted to project no more than 61 cm, provided the width of any side setback is not reduced to less than 75 cm.

504.2 Front setback. Open, unenclosed ramps, porches, platforms or landings, not covered by a roof, shall be permitted to extend no

more than 1.8 m into the required front setback, provided such porch does not extend above the first level and is no more than 1.8 m above grade at any point.

504.3 Rear setback. Windows shall be permitted to project into a required rear setback no more than 1.5 m.

505 GREEN STRIP REQUIREMENTS

505.1 General. Greening / Landscaping is required for all new buildings and additions over 100 m^2 as defined in Appendix II. Said landscaping shall be completed before occupancy of the building.

505.2 Green building norms Green building norms and Environmentally sustainable development shall be followed as prescribed by the Sanctioning Authority.

505.3 Front setback. Front setbacks required by these regulations shall be completely landscaped, except for those areas occupied by access driveways and parking.

505.4 Street-side side setbacks. All flanking street-side side setbacks shall be completely landscaped, except for those areas occupied by utilities, access driveways, paved walks, walls and structures.

505.5 Maintenance. All greenery and live landscaping required by these regulations shall be properly maintained. All dead or dying landscaping shall be replaced immediately and all sodded areas mowed, fertilized and irrigated on a regular basis.

506 LOADING SPACES

506.1 General. Loading spaces shall be provided on the same lot for every building in the C or I zones. No loading space is required if prevented by an existing lawful building. The City Planner shall be authorized to waive this requirement on unusual lots.

506.2 Size. Each loading space shall have a clear height of 4.3 m and shall be directly accessible through a usable door not less than 90 cm in width and 2 m high. The minimum area of a loading space shall be 37.2 m^2 and the minimum dimensions shall be 6 m long and 3 m deep.

507 PASSAGEWAYS

507.1 Residential entrances. There shall be a passageway leading from the public way to the exterior entrance of each dwelling unit in every residential building of not less than 3 m in width. The passageway shall be increased by 60 cm for each storey over two.

507.2 Separation between buildings. There shall be at least 3 m of clear space between every main building and accessory building on a lot. There shall be at least 6 m of clear space between every residential building and another main building on the same lot.

507.3 Location of passageways. Passageways shall be permitted to be located in that space set aside for required setbacks. Passageways shall be open and unobstructed to the sky and shall be permitted to have such projections as allowed for setbacks, provided the users of said passageway have a clear walkway to the public way. Any space between buildings or passageways that has less width than that prescribed herein shall not be further reduced.

508 APPROVAL FOR AND AVAILABILITY OF ESSENTIAL SERVICES

508.1 General. All projects that require the additional use of new facilities or essential services, such as sewers, storm drains, fire hydrants, potable water, public streets, street lighting and similar services, shall obtain such approval as required by the agency providing such service prior to project approval.

Nonavailability of essential services shall be permitted to be grounds for denying permits for additional development until such services are available. The jurisdiction is not obligated to extend or supply essential services if capacity is not available. If capacity is available, the extension of services shall be by and at the cost of the developer entity, unless the jurisdiction agrees otherwise. All service extensions shall be designed and installed in full compliance with the jurisdiction's standards for such service, and shall be subject to review, permit and inspection as required by other policies or laws of the jurisdiction.

509 GRADING AND EXCAVATION REGULATIONS

509.1 General. This section is intended to provide the community with fair and equitable grading practices and shall not supersede the requirements of any other regulation.

509.2 Grading responsibilities: Grading operations shall be in accordance with following sections.

509.2.1 Protection of utilities.

Public utilities or services shall be protected from damage caused by grading or excavation operations.

509.2.2 Protection of adjacent property.

Adjacent properties shall be protected from damage caused by to grading operations. No person shall excavate on land sufficiently close to the property line to endanger any adjoining public street, sidewalk, alley, or other public or private property, without supporting and protecting such property from any damage that might result.

509.2.3 Inspection notice.

The concerned official shall be notified at least 24 hours prior to the start of work.

509.2.4 Temporary erosion control.

Precautionary measures necessary to protect adjacent watercourses and public or private property from damage by water erosion, flooding or deposition of mud or debris originating from the site shall be put in effect. Precautionary measures shall include provisions of properly designed sediment control facilities so that downstream properties are not affected by upstream erosion.

509.2.5 Traffic control and protection of streets.

Flaggers, signs, barricades and other safety devices to ensure adequate safety when working in or near public streets shall be provided.

509.2.6 Hazard from existing grading.

Whenever any existing excavation, embankment or fill has become a hazard to life or limb, endangers structures, or adversely affects the safety, use stability of a public way or drainage channel, such excavation, embankment or fill shall be eliminated.

509.2.7 Tracking of dirt onto public streets.

Adequate cleaning of equipment to prevent the tracking of dirt and debris onto public streets shall be provided.

509.2.8 Maintenance of waterway and irrigation canals.

Precautionary measures to protect and maintain the flow of waterways and irrigation canals shall be taken.

509.2.9 Revegetation.

The loss of trees, ground cover, and topsoil shall be minimized on any grading project. In addition to mechanical methods of erosion control, graded areas shall be protected to the extent practical from damage by erosion by planting grass or ground cover plants and/or trees. Such plantings

shall provide for rapid, short-term coverage of the slopes as well as long-term permanent coverage. A plan by a licenced professional shall be provided where required by the City Planner.

509.3 Design standards. The grading design standards required herein shall be those found in nationally recognized standards.

CHAPTER VI

NON STANDARD APPLICATIONS

601 GENERAL

Any application not permitted as-of-right from the standard zoning regulations may be granted conditional development approval by the Commissioner through the Non Standard Application process. Approvals for such Non Standard Applications shall be carried out by panel review. Such Non Standard Applications can address various unique conditions where relief for the development from the zoning regulations could be granted. The Non-Standard Applications can include but is not limited to the following.
-Non-Conforming Existing Use.
-Zoning Lots Divided by Administrative Boundaries.
-Special Regulations for Large Scale Developments.
-Provisions for Home Offices.
-Non-Conforming and irregular shaped plots.

602 NON-CONFORMING EXISTING USE

602.1 General. Non-Complying Uses are uses in existence prior to the zoning regulations, which are incompatible and non-complying with the new zoning regulations. Regulations for such are provided to permit the continuance of such uses for a reasonable period of time, but restricting further such developments. The regulations aim to establish the character of the area and protect the public health, safety and general welfare. Criteria to assess the development are based on its impact on the surrounding community and are listed below.

602.2 Conditions. -The development is to be located at proximity to arterial roads for ease of access.
-Compliance with parking requirements and loading berths within the lot boundary comparable to regulations for similar use.
-Evaluation of Traffic Impact Assessment.
-Evaluation of Environmental Inventory & Assessment regarding pollution, noise, smell, and light etc.

602.3 Allowable additions and alterations. No material change in use which does not comply with the prevailing zoning regulations.

602.4 Damage, destruction or discontinuance. -If any damage or destruction of the non-conforming use exceeding more than 25% of the assessed valuation of buildings in use, the non-conforming use shall terminate, and the development should comply with conforming use.
-If damage or destruction of the non complying use is less than 25% of the assessed valuation of buildings in use, the non conforming use may be restored provided that the there is no increase in degree of non-compliance.
-If the non-conforming use is discontinued for more than a period of two years, or any use discontinued, thereafter only conforming use shall be applicable. However this shall not be applicable in case of war, government or public body related improvement project and labour difficulties.

602.5 Termination. Non-conforming uses may be continued for five years after the date of gazette of the zoning regulations. After such date, the non-conforming use shall terminate and thereafter only conforming use shall be applicable, unless conditional approval has been obtained from the Commissioner.

603 ZONING LOTS DIVIDED BY ADMINISTRATIVE BOUNDARIES

This regulation is applicable when a zoning lot is located between two or more administrative boundaries or landuse boundaries with different uses.

603.1 Criteria for assessment. The zoning regulation of the parcel area which has more than 50% total parcel of the overall parcel area shall apply to the entire parcel.
The part of the parcel in the landuse zone with less than 50% of the area shall follow the zoning regulation of the larger area of the parcel from the adjacent landuse zone.

604 PROVISION FOR HOME-OFFICE

604.1 General. Residential Zones allow residents to engage in uses other than residences so long as the principal use of the residence remains as a dwelling and the proposed ancillary use meets the requirements and restrictions as set forth in the regulations. Home Office is allowed in R1, R2 and R3 Zones. Some common ancillary uses include offices (for medicine, dentistry, architecture, engineering, law, or psychiatry), Music rehearsal studio, IT/ other consultancy services, web design, accountancy services, data entry, teaching not extending to classes or school like establishments, or other professional related uses and so on. The following are the criteria for assessment.

604.2 Conditions.

1. Prohibit exterior physical changes to the home for the purposes of conducting business, which is not residential in character.
2. The home occupation shall not exceed 25 percent of the floor area of the primary structure.
3. Other than those related by blood, marriage or adoption, no more than one person may be employed in the home occupation.
4. Inventory and supplies shall not occupy more than 50 percent of the area permitted to be used as a home occupation.
5. There shall be no exterior display or storage of goods on said premises.
6. Home occupations involving beauty shops or barber shops shall require a conditional-use permit.
7. Two additional parking spaces shall be provided on the premises, except only one need be provided if the home occupation does not have an employee. Said parking shall comply with the parking requirements in these regulations.
8. Prohibit the use of display of advertisements or posters.

604.3 Traffic assessment. -The business activities must not introduce extra human or vehicular traffic to the surroundings or the neighbourhood.
-Allow a maximum of two non-residents to work from a residential unit.
-Additional off street parking to be provided for every $200m^2$ of floor area used for the home office. (Refer Figure 1).
Multi-family apartments in zones that allow home offices should make provision for such additional off street parking to cater for future home-offices.

604.4 Prohibited business activities. -The business activities must not be illegal, unlawful or immoral.
-The business must not generate noise, smoke, odour, chemical/liquid waste or dust that could become a nuisance.
-Storage and use of dangerous chemicals and hazardous substances are strictly prohibited.
-There must be no solicitation of business that may cause annoyance to the residents or public.
-There must be no selling of physical goods.
-The only kind of office that can be allowed in group development is that which serves only the

Figure 1: Provision for home office

lawful inhabitants of the lot. It cannot serve members of a group or organization who live elsewhere.

604.5 Businesses not permitted in home office.

- Contractors business.
- Car-Trading business.
- Commercial schools
- Employment agency.
- Businesses involving gathering of large number of people.
- Courier businesses.
- Manufacture/ preparation/ processing of products and goods.
- Repair of household appliances, electrical products, footwear, etc.
- Catering/restaurants.
- Shops and any form of retail activity, including pet shops.
- Funeral chapels or homes.

604.6 Safety requirements. The business must comply with safety requirements imposed by the Fire Safety Regulations.

605 NON-CONFORMING AND IRREGULAR SHAPED LOTS

605.1 General. The intent is to allow potential development for non-conforming and irregular shaped parcels of land to have meaningful layout within landed housing through marginal allowable deficiencies in plot width and zoning relaxation. Only parcels in which development in a lower zone is not possible shall be considered for assessment. The criteria for assessment.

605.2 Marginal deficiency/ land acquisition affected lots -For parcels not conforming to zoning size a variation can be considered if the proposal is an infill development in existing plots. The reduced variation should be 10% of the minimum lot size.
-Variation is applicable for parcels affected by surrendering land for city road and infrastructure projects. The reduced variation should be 10% of the minimum lot size.

605.3 Irregular-shaped housing lots, detached houses. -The subject plot with the deficient plot width should have an average plot width of at least 8m so as to ensure a meaningful building layout.
-The subject plot with the deficient plot width must comply fully with the minimum lot size of the respective zone, and all other zoning regulations e.g. setback, road buffer, etc.
-The odd-shaped configuration allowance is only applicable for an existing lot configuration and not for lots created by subdividing regular or less regular-shaped plots.

605.4 Irregular-shaped housing lots, detached houses in corner lots with long frontage. The standard front setback will apply for a width of 8m, which is to be measured from the common boundary line with the adjoining neighbouring lot; beyond the 8m width, a reduced front setback of 2m is allowed.

605.5 Housing lots located away from access roads, or inadequate vehicle access. -Property access is not guaranteed for developments which do not have access via any of the types of roads. Hence, development permit should be denied.
-Authority can help to coordinate between the concerned neighbouring lots. A property with inadequate proper access shall not be subdivided.
-Maximum distance of the property without adequate vehicular access should be 30m from the city road or as per the National Building Code regulations.

606 OTHER CONDITIONS

1. All existing Acts/Rules restricting development activities near Water bodies, Railways, Electrical lines, Airport, Oil / Gas Pipelines, Heritage Structures, Religious Structures and EIA Notification shall be followed in all zones, example

    - Rain Water Harvesting Structures shall be provided as given in Acts /Rules
    - Provisions of the Andhra Pradesh Water, Land and Trees Act, 2002 shall be complied in such sites and schemes where ever applicable.

2. The building requirements and standards not covered in these regulations shall be compiled with National Building Code.

3. Provisions for Economical Weaker Section/LIG housing shall be followed where proposed site area for residential project is 4000 Sqm and above by reserving 10% built up area or 25% of no of dwelling units or shelter fee as prescribed by Commissioner.

4. Buildings shall be designed for compliance with earth quake resistance and resisting other natural hazards. The Completion Certificate shall mention that the norms have been followed in the design and construction of buildings for making the buildings resistant to earthquake.

5. In case of Apartment / Group Development where there are 100 units and above, a minimum 3% of the total built up area shall be planned and developed for common amenities and facilities.

6. In case of Apartment / Group Development where there are 100 units and above, buildings proposed for Nursing Homes, Hospitals and Hotels provision for Solar Water Heating System and Solar Lighting System, in the building and in the site for outdoor lighting, etc. For all such buildings provision of Recycling of Water shall be made. In case of apartments and Group development having 100 units and above, 10% of site area shall be developed as organized open space for totlot. At least 50% of totlot shall be provided at one place.

7. Engaging of the services of a licenced developer / builder shall be mandatory for Apartment Buildings, Group Development, all types of Planned Unit Development Schemes, all High-Rise Buildings and all Commercial Complexes. Developments undertaken for undertaken by public agencies are exempted from the above condition.

8. Any licenced developer / builder / other professionals who undertake construction in violation of the sanctioned plans shall be blacklisted and this would entail cancellation of their licence besides being prosecuted under the relevant laws / code of conduct.

9. No developer /professional shall be allowed to undertake development/do business / practice unless they are licenced with the sanctioning authority.

607 PLANNED UNIT DEVELOPMENT

607.1 Approval. Planned unit developments (PUDs) shall be allowed by Commissioner in any zoning district. No such planned unit development permit shall be granted unless such development will meet the use limitations of the zoning district in which it is located and meet the density and other limitations of such districts, except as such requirements may be lawfully modified as provided by these regulations. Compliance with these regulations in no way excuses the developer from the applicable requirements of a subdivision regulation, except as modifications thereof are specifically authorized in the approval of the application for the planned unit development.

607.2 Intent. These regulations are to encourage and provide means for effecting desirable and quality development by permitting greater

flexibility and design freedom than that permitted under the basic district regulations, and to accomplish a well-balanced, aesthetically satisfying city and economically desirable development of building sites within a PUD. This regulation facilitates large-scale developments spanning several zoning lots by creating greater flexibility for the purpose of producing better site planning. Its objective is to enable better arrangement of open spaces and utilization of natural features. These regulations are established to permit latitude in the development of the building site if such development is found to be in accordance with the purpose, spirit and intent of this regulation and is found not to be hazardous, harmful, offensive or otherwise adverse to the environment, property values or the character of the neighborhood or the health, safety and welfare of the community. It is intended to permit and encourage diversification, variation and imagination in the relationship of uses, structures, open spaces and heights of structures for developments conceived and implemented as comprehensive and cohesive unified projects. It is further intended to encourage more rational and economic development with relationship to public services, and to encourage and facilitate the preservation of open lands.

607.3 Conditions.

607.3.1 Area

No planned unit development shall have an area less than 4 ha.

607.3.2 Uses

A planned unit development which will contain uses not permitted in the zoning district in which it is to be located will require a change of zoning district and shall be accompanied by an application for a zoning amendment, except that any residential use shall be considered a permitted use in a planned unit development, which allows residential uses and shall be governed by density, design and other requirements of the planned unit development permit. Where a site is situated in more than one use district, the permitted uses applicable to such property in one district may be extended into the adjacent use district.

607.3.3 Ownership

The development shall be in single or corporate ownership at the time of application, or the subject of an application filed jointly by all owners of the property.

607.3.4 Project information

Requirement for a time schedule for carrying out development, financial plan, common parking areas provision plan, and maintenance plan for common open spaces and parking. A subdivision plan if applicable to the development should be provided and shall comply with all applicable regulations.

607.3.5 Design

The Commissioner shall require such arrangements of structures and open spaces within the site development plan as necessary to ensure that adjacent properties will not be adversely affected.

607.3.6 Density

Density of land use shall in no case be more than 15 percent higher than allowed in the zoning district.

607.3.7 Arrangement

Where feasible, the least height and density of buildings and uses shall be arranged around the boundaries of the development.

607.3.8 Specific regulations.

Lot area, width, setback, height, density and coverage regulations shall be determined by approval of the site development plan.

607.3.9 Environment

Evaluate Environmental Impact Assessment (EIA) for the proposal.

607.3.10 Traffic and Parking.

-Evaluate Traffic Impact Assessment (TIA) for the proposal.
-Allowance to be provided for multiple accesses into development as per the TIA.
-Private internal roads shall confirm to required standards set by the fire regulations.
-Development with multiple uses having mixed use, or commercial need to comply with the parking requirements of such zone and should be provided within the boundary.

607.3.11 Infrastructure

-Compliance to infrastructure connectivity with surrounding areas.
-Drainage study or drainage plan to show impact of proposed development to the Surrounding with the additional outflow.
-Compliance of infrastructure requirements such as sewerage treatment plants, electric substation, drainage etc.

607.3.12 Facilities

Where required provision of public facilities in compliance with regulations of the Authority shall be made.

607.3.13 Open spaces

Preservation, maintenance and ownership of required open spaces within the development shall be accomplished by either:
1. Dedication of the land as a public park or parkway system; or
2. Creating a permanent, open space easement on and over the said private open spaces to guarantee that the open space remain perpetually in recreational use, with ownership and maintenance being the responsibility of an owners' association established with articles of association and bylaws, which are satisfactory to the legislative body.

607.3.14 Landscaping

Landscaping, fencing and screening related to the uses within the site and as a means of integrating the proposed development into its surroundings shall be planned and presented for approval, together with other required plans for the development. A planting plan showing proposed tree and shrubbery plantings shall be prepared for the entire site to be developed. A grading and drainage plan shall also be submitted to the Commissioner with the application.

607.3.15 Signs.

The size, location, design and nature of signs, if any, and the intensity and direction of area or flood lighting shall be detailed in the application.

607.3.16 Desirability.

The proposed use of the particular location shall be shown as necessary or desirable, to provide a service or facility that will contribute to the general well being of the surrounding area. It shall also be shown that under the circumstances of the particular case, the proposed use will not be detrimental to the health, safety or general welfare of persons residing in the vicinity of the planned unit development.

607.3.17 Urban design

Provide strategy plan to explain harmonious blending of development with surrounding location.
Urban Form strategy of the development.

607.4 Determination by Commissioner

607.4.1 Considerations.

In carrying out the intent of this section, the Commissioner shall consider the following principles:
1. It is the intent of this section that site and

building plans for a PUD shall be prepared by a designer or team of designers having professional competence in urban planning as proposed in the application.
2. It is not the intent of this section that control of the design of a PUD by the Commissioner be so rigidly exercised that individual initiative be stifled and substantial additional expense incurred; rather, it is the intent of this section that the control exercised be the minimum necessary to achieve the purpose of this regulation.
3. In an approval, the commissioner may impose such conditions as it deems necessary to secure compliance with the purposes set forth in this chapter.

607.5 Required Contributions

607.5.1 General.

Commissioner as part of the approval of a PUD, may require an applicant to make reasonable contributions to include, but not limited to any combination of the following:
1. Dedication of land for public park purposes.
2. Dedication of land for public school purposes.
3. Dedication of land for public road right-of-way purposes.
4. Construction of, or addition to, roads serving the proposed project when such construction or addition is reasonably related to the traffic to be generated.
5. Installation of required traffic safety devices.
6. Preservation of areas containing significant natural, environmental, historic, archeological or similar resources.

607.6 Commissioner's Action

607.6.1 Approval.

The Commissioner may require that the following condition for a planned unit development (among others he deems appropriate) be met by the applicant:
-That the development is planned as one complex land use rather than as an aggregation of individual and unrelated buildings and uses.

607.6.2 Limitations on application.

1. Upon approval of a PUD, construction shall proceed only in accordance with the plans and specifications approved by the Commissioner and in compliance with any conditions attached by the jurisdiction as to its approval.
2. Amendment to approved plans and specifications for a PUD shall be obtained only by following the procedures here outlined for first approval.
3. The City Planner shall not issue any permit for any proposed building, structure or use within the project unless such building, structure or use is in accordance with the approved development plan and with any conditions imposed in conjunction with its approval.

CHAPTER VII

REGULATIONS FOR SPECIAL FACILITIES

701 PUBLIC FACILITIES

Developments allowed within the zoning as conditional uses or permitted uses, but which are not residential, commercial or industrial and do not fall under the parks category require a special assessment and permit for development. These developments need to be evaluated based on their provisions, location and distribution. The regulations of the particular zone in which the plot is located shall be followed unless otherwise stated in the following tables in Appendix IV. The developments that require evaluation are as follows.

1. Educational Institutes.
2. Medical and Health facilities.
3. Religious Institutes.
4. Civic & Community Institutes.
5. Other Uses.

Specialized Evaluation criteria for each of the above mentioned development types are elaborated in the following sections.

702 EDUCATIONAL INSTITUTES

702.1 General. An educational institution is an area used or intended to be used mainly for educational purposes. Examples of educational institution include.

- Kindergarten.
- Primary/ Secondary schools.
- Colleges and Vocational Institutes.
- Training institutes.
- Universities.
- Foreign and special schools (e.g. school for the disabled).

Commercial schools and tuition centers are considered as commercial uses and should be located on land zoned "Commercial" in the Zoning Plan. Such developments are therefore not allowed under the education zones. Examples of Commercial Schools are: tuition centre, language school, computer school, dress-making school, baking and cooking school, music/dancing school, child development school, children playgroup, art school. The criteria for assessment of education institutes are given in Appendix IV.

702.2 Kindergarten/child care centre. Refer Appendix IV fir regulations and criteria for assessment.

702.3 Special education schools. These regulations are intended for Special Education Schools, which provide education and training for the disabled. The schools are grouped into two broad categories for the purpose of development controls.

1. Ambulatory: These include schools for the mentally challenged, visually handicapped and the hearing impaired.

2. Non-ambulatory: These include schools for the orthopedic impaired or multi-handicaps.

Purpose-built special education schools are allowed on land zoned for educational purposes. They can also be allowed on government allocated land for such purposes e.g Reserve Sites. Conversion of properties to special education schools to be evaluated on a case-by-case basis, depending on the amenity of the area by CRDA.

703 HOSPITALS AND HEALTH INSTITUTIONS

703.1 General. Hospitals and health institutions are development that provide healthcare and ward services to patients. Hospitals are commonly freestanding developments. Hospitals are conditional uses in most residential and commercial zones. The sites for potential locations are identified in the land use plan. The regulations are as provided in Appendix IV.

Types of Health institutes that can be developed as hospitals are:

1. Teaching hospital with educational facilities- public/private
2. Super specialty hospital with two or more specialties- public/private
3. Super specialty hospital with single specialty- public/private
4. Area Hospital/ multi-specialty hospital having general medicine, paediatrics, gynaecology and obstetrics, general surgery, orthopaedics, ophthalmology, dental surgery, and anaesthesia - public/private

704 CIVIC AND COMMUNITY FACILITIES

704.1 General. Civic and Community Facilities are defined as developments uses or intended to be used mainly for civic community or cultural facilities or other similar purposes. They can be further categorized into the following.

1. Civic Institutions such as a courts, police station, fire station, special government building, prison, etc.
2. Community Institutions such as an association building, community club/ centre, professional institution, welfare home, home for the disabled, home for the aged/sheltered homes, youth and children complex, social welfare complex, crematorium etc.
3. Cultural Institutions such as Performing Arts Centre, Library, Museum, Arts/ Science, Centre, Art Gallery etc.

Most of the Civic and Community Facilities are allowed within Residential, Commercial and Industrial zones either as permitted uses, allowable uses or conditional uses.

704.2 Special institutional buildings. Old Age Homes, Disabled Homes, and Community Centers are the institutional buildings, which require special development regulations on top of the regulations of the other institutional buildings. The parameters to evaluate them are provided in Appendix IV.

704.3 Religious institutions. Places used or intended to be used, for religious public worship purpose can be termed as Religious Institutes. e.g. Temples, Churches, Mosques and other places of worship are considered as religious institutes. Places of worship are usually freestanding developments, and in some special situations may share a common wall development. Sites for potential religious places are identified in the proposed land use plan. Religious institutions can occur in residential, commercial and industrial zones, but require special evaluation for development from the Authority.

704.4 Petrol stations. A petrol station is a development which is involved in the sale of fuel for motor vehicles. The petrol station can also include a range of other facilities such as: minor repairing and servicing of vehicles, retail outlets, and car wash and tire service facilities. Petrol stations are usually free-standing developments. Petrol stations are conditional uses in most residential and commercial uses and are allowable uses in industrial zones.

704.5 Golf course. A golf course is an area designated for playing golf and may consist of a driving range and clubhouse for use by its members. It is zoned as P2 Zone which allows active recreation.

Notes:

1) Plot Ranges:-
100 sqm:- 100 to 300 sqm; 300 sqm:- above 300 up to 500 sqm; 500 sqm:- 500 to 2000 sqm; 2000sqm:- above 2000 up to 4000 sqm; 4000 sqm:- above 4000 sqm

2) ** Cellars/Basements are meant exclusively for parking only and not for habitable or commercial purposes. They are allowed above 500sqm plot areas subject to efficiently designed driveways, access, aixle and ramps for maneuverability of vehicles. There shall be ventilation to cellars with not less than 2.5 % of cellar floor area.Upto 10% of cellar may be used for utilities and non habitable purposes like AC plant room, generator room, sewerage treatment plant, electrical installations and laundry room.

3) In case of Apartments and Group development where there are 100 units and above, a minimum of 3% of total built-up area upto maximum of 2000sq.m. shall be planned and developed for common amenties and facilities like convenient shopping,community hall, club house, creche, gymnasium. This block shall not be part of residential plots. However in case of single block, amenities can be provided in the same block.

5) Minimum Parking Requirements	
Residential	1 stall per dwelling unit.
Service apartments	1 stall per apartment.
Food outlets	1 stall per 5 seats in food outlets.
Commercial	
a. Multiplex/Shopping Mall	1 stall for 33 sqm gross floor area.
b. Retail/ Shopping Complex/Office Space/Hotels/Lodges	1 stall for 50 sqm gross floor area.
c. Wholesale Market	1 heavy vehicle parking for 500 sqm. gross floor area
Logistics	1 heavy vehicle parking for 500 sqm. gross floor area
Industrial	1 stall for 100 sqm gross floor area and 1 heavy vehicle parking for 3000 sqm. gross floor area
Parks and open spaces	1 stall per 1000 sqm of park area
Cultural centres/Museum/Library/Community Centre	1 stall for 200 sqm gross floor area.
Cinema Hall/Theatre/Auditorium.	1 stall per 12 seats.
Kalyanamandapam/Function Hall	1 stall per 33 sqm of GFA
Tourism and culture	1 stall per 50 sqm of GFA.
Sports Complex/Stadium	1 stall per 20 seats.
Primary School	1 stall per 3 classrooms and 20% of standard requirement,4 bus parking stalls
Secondary School	1 stall per 2 classrooms and 20% of standard requirement,4 bus parking stalls, For workshop and laboratories 1 stall per 200 sq.mtr. Of GFA
Special Education Schools	1 stall per 3 classrooms and 20% of standard requirement.
College	1 stall per 30students and 1 stall per 30 staff.
University	1stall per 20 students and 1 stall per 20 staff.
Health clinics/Polyclinics	1 stall per consulting room and 3 parking stalls for ambulances(9mx3m).
Hospital	
a. Upto 500 beds	1 stall per 4 beds. Minimum 2 parking stalls for Disabled visitor parking and 8 parking stallsfor ambulances(9mx3m).
b. Beyond 500 beds	1 stall per 5beds. Minimum 2 parking stalls for Disabled visitor parking and 8 parking stallsfor ambulances(9mx3m).
Fire Station/Police staion/Health Centre	1 stall for 200 sqm gross floor area.
Religious Place	1 stall per 50 sqm of GFA.

***In case any premise has more than 1 use, parking requirement shall be calculated as per respective use.**

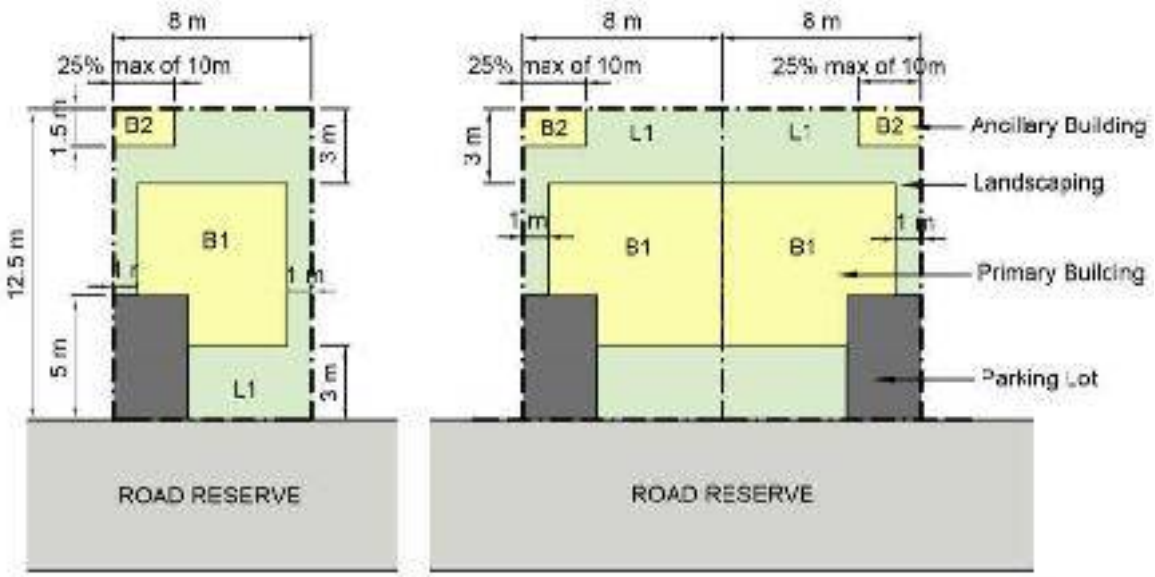
APPENDIX III–ZONING REGULATION TABLES

1001. Village Planning Zone (R1)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped residential uses within the Village Planning Zone (R1). • Lots zoned or re-zoned for residential uses within the Village Planning Zone (R1).		
1.0 USES		
1.1 Permitted Uses	• Attached (A), Semi-detached (SD), detached houses (D), Apartments(AP) &Group Development (GD) • For approved layouts & plots having access through existing 12m wide road in R1 zone, all uses allowed in R3 are applicable. • Non confirming use • For detail list of uses refer to Appendix I	
1.2 Conditional Uses	• Standalone food outlet with less than 50 seats/100 sqm including kitchen • Public facilities • Convenience stores not exceeding 60m² of floor area or 5% of GFA, whichever is less • For detail list of uses refer to Appendix I • All unauthorised layouts shall be subjected to review by CRDA. • Fish market only if it is existing • Banquet hall/commercial shopping complex/centre, minimum plot size 2000 sqm (accessible by existing 12m wide road) • All public facilities related to health to follow public health department guidelines/Indian medical association. • Non-polluting units 5HP power consumption. • Communication towers/gas supply installations-subject to fulfilling the guidelines of statuary bodies. • Spiritual centre/Religious centre/Sports complex – minimum size 500 sqm subject to availability of 12m wide existing access road.	
1.3 Prohibited Uses	• Organised Informal Market • Service Apartments • General commercial uses • Industrial uses • Major infrastructure • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Car parking garage • Outdoor kitchen • Store rooms • For detail list of uses refer to Appendix I	

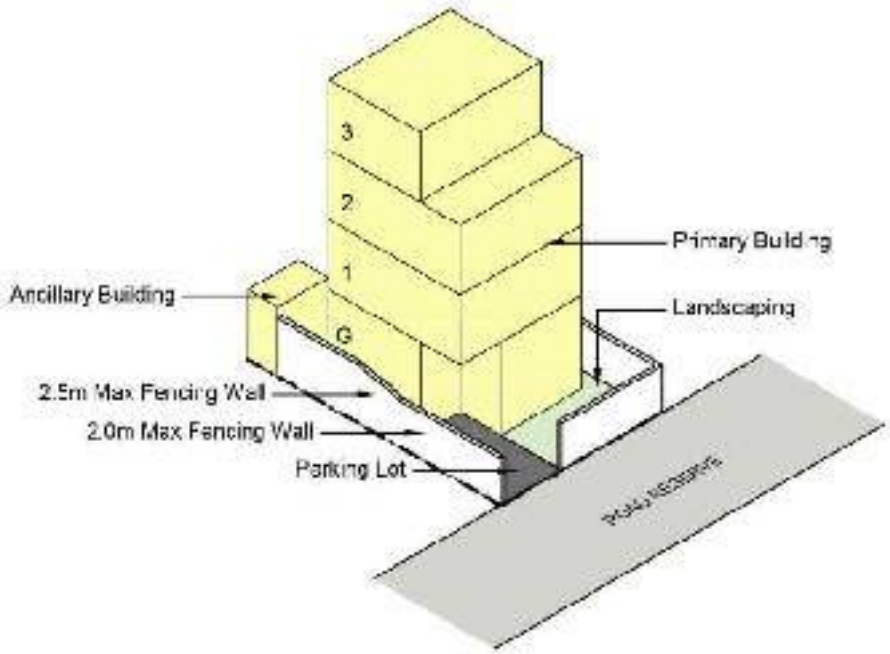
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Plot Sizes (sq.m)	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II.	
2.3 No. of Basements	• Refer Appendix II.	
2.4 Maximum Floor Space Index (FSI)	• Refer Appendix II.	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• G+3 for below 300m² • G+4 for 300m² and above • G (ancillary buildings)	
3.2 Floor to Floor Height	• Ground Floor – 4.5m maximum • Other Floors – 3.6m maximum	
3.3 Building Form	• Detached House • Semi Detached House • Attached House • Apartment • Group Development	

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Conversion of a residential building to other permitted uses shall be considered subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	



4.0 SETBACK (MINIMUM)		
4.1 Building (Above Grade)	Refer Appendix II.	
4.2 Basement Setback	Refer Appendix II.	
4.3 Ancillary Buildings	Refer Appendix II.	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II.	

5.0 SERVICE AREAAND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II.	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application	
5.4 Mechanical Equipment	• Refer Appendix II.	
6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	Refer Appendix II.	
6.4 Visitor Parking accessible to specially abled.	Refer Appendix II.	
6.5 Minimum Dimensions	Refer Chapter V.	
6.6 Vehicular Access to Parking Lot	• Only 1 vehicular ingress and egress point shall be allowed for plot less than 4000m^2 and 2 for more than 4000m^2 • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by CRDA or other relevant authorities	
7.0 FENCING		
7.1 Location	• Fencing and walls in the front, side and rear yards shall be at the perimeter of the lot	
7.2 Heights	• Rear and side fencing or walls shall not exceed 2.0 m in height. Front boundary wall should not exceed 2.0 m in height. • Additional height • Shall be evaluated on case-by-case basis by CRDA or other relevant authorities	
7.3 Materials	• The front boundary wall shall use material that allows 50% transparency	
8.0 CIRCULATION		
8.1 Pedestrian	Refer Appendix II.	
8.2 Public Transit	Refer Appendix II.	
9.0 SIGNAGE		
9.1 Permitted	• One sign shall be located on the fencing wall along the front setback • A maximum of 35cm height x 35cm width of signage shall be permitted Protrusion of the signage must be contained within plot boundary	



10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area asOrganised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Decks as recreational facility	Refer Appendix II.

1002.Low Density Zone (R2)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped residential uses within the Low Density (R2) • Lots zoned or re-zoned for residential uses within the Low Density Zone (R2)		
1.0 USES		
1.1 Permitted Uses	• Attached, Detached, Semi- Detached houses and Apartments • Residential apartments (all plots accessible by 12m wide road) • For detail list of uses refer to Appendix I	
1.2 Conditional Uses	• Standalone food outlet with less than 50 seats/100 m^2 including kitchen • Hotels (incl. its ancillary uses) • Public facilities • Convenience stores not exceeding 60m^2 of floor area or 5% of GFA, whichever is less • Home Office • Banquet hall of minimum size 2000 sqm plot (accessible by existing 12m wide road)	
1.3 Prohibited Uses	• Residential apartments (all plots NOT accessible by 12m wide road) • Service Apartments • Industrial uses • Major infrastructure • General commercial use • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Car parking garage • Guard house • Maids' quarters • Outdoor kitchen • Store rooms • For detail list of uses refer to Appendix I	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Lot size of 450$m^2$for detached landed housing development, 250m^2 for semi-detached, 250$m^2$for attached development, 500m^2 for apartment	
2.2 Maximum Building Coverage	• 50% for Detached house • 50% for Semi-detached house • 50% for Attached house and 40% for Apartments	
2.3 No. of Basements allowed.	• Refer Appendix 2	

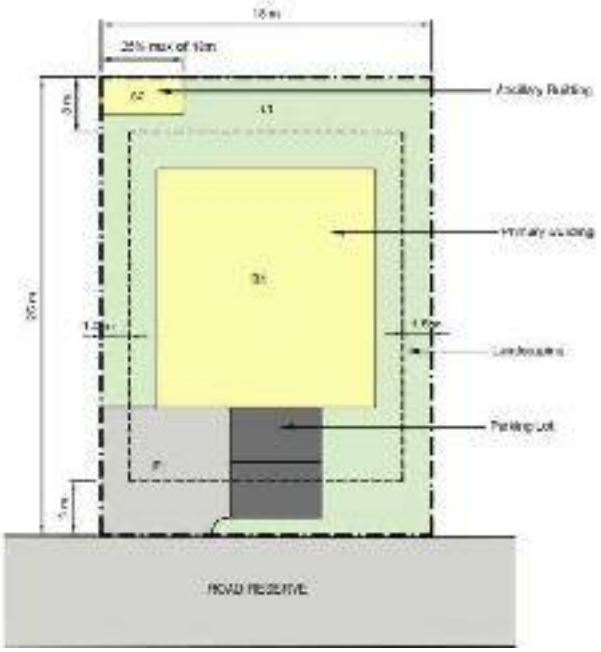
	Regulation	Remarks
2.4 Maximum Floor Space Index(FSI)	• Detached -1.0, • Semi-Detached- 1.0 • Attached House – 1.0 • Apartments – 1.2	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• Detached – G+2 • Semi-Detached- G+2 • Attached House – G+2 • Apartments – G+4 • G (ancillary buildings)	
3.2 Floor to Floor Height	• Ground Floor – 4.5m maximum • Other Floors – 3.6m maximum	
3.3 Building Form	• Detached house (D) • Semi-Detached house (SD) • Attached house (A) and Apartment (AP)	

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Any additional floor area required for the non-conforming use will:
	• Conversion of a residential building to other permitted uses shall be considered, subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall;
	  • Aesthetic enhancement of the front elevation of the building	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II.	Attached housing should include minimum of 3 plots.
4.2 Basement Setback	• As per Appendix II.	

	Regulation	Remarks

4.3 Ancillary Buildings	• Refer Appendix II.
	• Other ancillary uses
	  • May be allowed within the side and rear setbacks
	  • Are subject to their overall width not exceeding 25% of length of the boundary within which they encroach	



4.4 Between Multiple Buildings on the Same Lot	• Refer Appendix II.	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Annexure II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	• At grade or rooftop water tank, mechanical and telecommunications equipment including solar energy equipments:
	  • Shall be screened subject to approval by CRDA or other relevant authorities	

6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary	
6.2 Surfacing	Refer Appendix II.	
6.3 Minimum Required Parking Stalls	Refer Appendix II.	
6.4 Visitor Parking accessible to specially abled.	Refer Appendix II.	
6.5 Minimum Dimensions	Refer Appendix II.	
6.6 Vehicular Access to Parking Lot	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by CRDA or other relevant authorities	
7.0 FENCING		
7.1 Location	• Fencing and walls in the front, side and rear yards shall be at the perimeter of the lot	

	Regulation	Remarks
7.2 Heights	• Rear and side fencing or walls shall not exceed 2 m in height, front boundary wall shall not exceed 2 m • Additional height • Shall be evaluated on case-by-case basis by CRDA or other relevant authorities	
7.3 Materials	• The front boundary wall shall use materials that allow 50% transparency	
8.0 CIRCULATION		
8.1 Pedestrian	Refer Appendix II.	
8.2 Public Transit	Refer Appendix II.	
9.0 SIGNAGE		
9.1 Permitted	• One sign shall be located on the fencing wall along the front setback • A maximum of 35cm height x 35cm width of signage shall be permitted • Protrusion of the signage must be contained within plot boundary	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as Organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Decks as recreational facility	Refer Appendix II.

1003. Medium to High Density Zone (R3)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped residential uses within the Medium to High Density Zone (R3) • Lots zoned or re-zoned for residential uses within the Medium to High Density Zone (R3)		
1.0 USES		
1.1 Permitted Uses	• Attached(A), semi-detached(SD) and detached(D) houses • Apartments (all plots accessible by minimum 12m wide road) • For detail list of uses refer to Appendix I	
1.2 Conditional Uses	• Standalone food outlet with less than 50 seats/100 sqm including kitchen • Hotels (incl. its ancillary uses) • Public facilities • Convenience stores not exceeding 60m² of floor area or 5% of GFA whichever is less. • Home Office • All permitted uses in R1 and R2 zone • All unauthorised layouts shall be subjected to review by CRDA. • Banquet hall/commercial shopping complex/centre, minimum size 2000 sqm (accessible by existing min. 12m wide road) • Non-polluting industries units machinery up to 5HP • For detail list of uses refer to Appendix I	
1.3 Prohibited Uses	• Apartments (all plots NOT accessible by 12m wide road) • Service Apartments • Industrial uses • Major infrastructure • General commercial use • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Car parking garage • Guard house • Maids' quarters • Outdoor kitchen • Store rooms • For detail list of uses refer to Appendix I	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II.	
2.2 Maximum Building Coverage	• Refer Appendix II.	

	Regulation	Remarks
2.3 No. of Basements allowed	• Refer Appendix II.	
2.4 Maximum Floor Space Index(FSI)	• Detached, Semi-Detached and Attached -1.75 • Medium Density Apartments: 2.0 • High Density Apartments : 2.4 • Group development: 2.4	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• G+3 (Attached, semi-detached and detached) up to 300 sqm • G+5 up to 2000sqm • G+11(Apartments)> 2000 sqm – High rise • G (ancillary buildings)	
3.2 Floor to Floor Height	• Ground Floor – 4.5m maximum • Other Floors – 3.6m maximum	
3.3 Building Form	• Detached (D) • Semi-Detached (SD) • Attached (A) • Apartments (AP) • Group development(GD)	

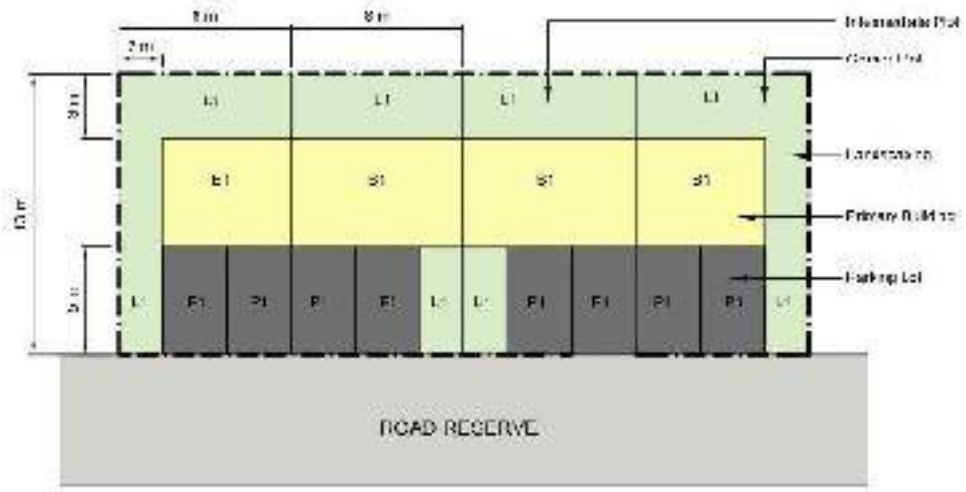
3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Conversion of a residential structure to other permitted uses shall be considered, subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; Aesthetic enhancement of the front elevation of the building.	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II.	
4.2 Basement Setback	• Refer Appendix II.	

	Regulation	Remarks

4.3 Ancillary Buildings	• In the front setback along the lot frontage,
	  • May be allowed at the zero setback provided their width does not exceed 25% of the lot frontage
	• Other ancillary uses
	  • May be allowed within the side and rear setbacks
	  • Are subject to their overall width not exceeding 25% of length of the boundary within which they encroach	

4.4 Between Multiple Buildings on the Same Lot	• Refer Annexure II.	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Annexure II.	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application	



5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	• At grade or rooftop water tank, mechanical ,telecommunications and solar equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities	

6.0 PARKING		
6.1 Location	• Refer Appendix II.	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	Refer Appendix II.	
6.4 Visitor Parking accessible to specially abled	Refer Appendix II.	
6.5 Minimum Dimensions	• Refer Chapter V	

	Regulation	Remarks
6.6 Vehicular Access to Parking Lot	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by CRDA or other relevant authorities	
7.0 FENCING

1004.High Density Zone (R4)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped residential uses within the High Density Zone (R4) • Lots zoned or re-zoned for residential uses within the High Density Zone (R4)		
1.0 USES		
1.1 Permitted Uses	• Apartments (all plots accessible by 12m wide road) • High rise apartments (all plots accessible by 12m wide road) • Shop within apartment complex not exceeding 60 m^2 of floor area or 5% of GFA whichever is less. • Clubhouse • For detail list of uses refer to Appendix I	
1.2 Conditional Uses	• Standalone food outlet with less than 50 seats/100 sqm including kitchen • Hotels (incl. its ancillary uses) • Public facilities • Home Offices • All permitted uses in R1, R2 and R3 zone • Banquet hall/commercial shopping complex/centre, minimum size 2000 sqm (accessible by existing 12m wide road) • Non-polluting industries units machinery up to 5HP • For detail list of uses refer to Appendix I	Refer land use plan for guidance on location of facility Refer appendix for regulations regarding facilities. Refer regulations for home offices
1.3 Prohibited Uses	• Apartments (all plots not accessible by 12m wide road) • Service Apartments • General Commercial uses • Industrial uses • Major infrastructure • Single Family Residential developments • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Car parking garage • Guard house • Maids' quarters • Outdoor kitchen • Store rooms • For detail list of uses refer to Appendix I	
2.0 COVERAGE		
2.1 Minimum Lot Size	• 4000 m^2	
2.2 Maximum Building Coverage	• 50% maximum	

	Regulation	Remarks
2.3 No. of basements allowed	• Refer Appendix II.	
2.4 Maximum Floor Space Index(FSI)	• 3.5 maximum	
3.0 BUILDABLE AREA (COVERAGE)		
3.1 Maximum Number of Floors	• Refer Appendix II.	
3.2 Floor to Floor Height	• Ground Floor - 4.5m • Other Floor- 3.6m	
3.3 Building Form	• Refer Appendix II.	

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Conversion of a residential structure to other permitted uses shall be considered subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	

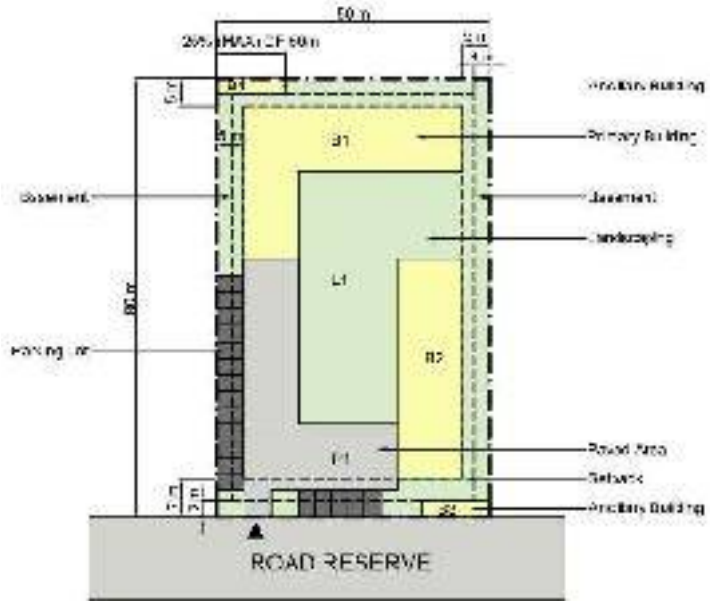
4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II.	
4.2 Basement Setback	• All lot boundaries: 3 m (min) (to allow for any below grade services that may be required and ensure the viable growth of trees)	

4.3 Ancillary Buildings	• In the front setback along the lot frontage,
	  • May be allowed at the zero setback provided their width does not exceed 25% of the lot frontage
	• Other ancillary uses
	  • May be allowed within the side and rear setbacks
	  • Are subject to their overall width not exceeding 25% of length of the boundary within which they encroach.	

4.4 Between Multiple Buildings on the Same Lot	• The setback between multiple adjacent buildings within the same lot shall be a minimum of 6 m	

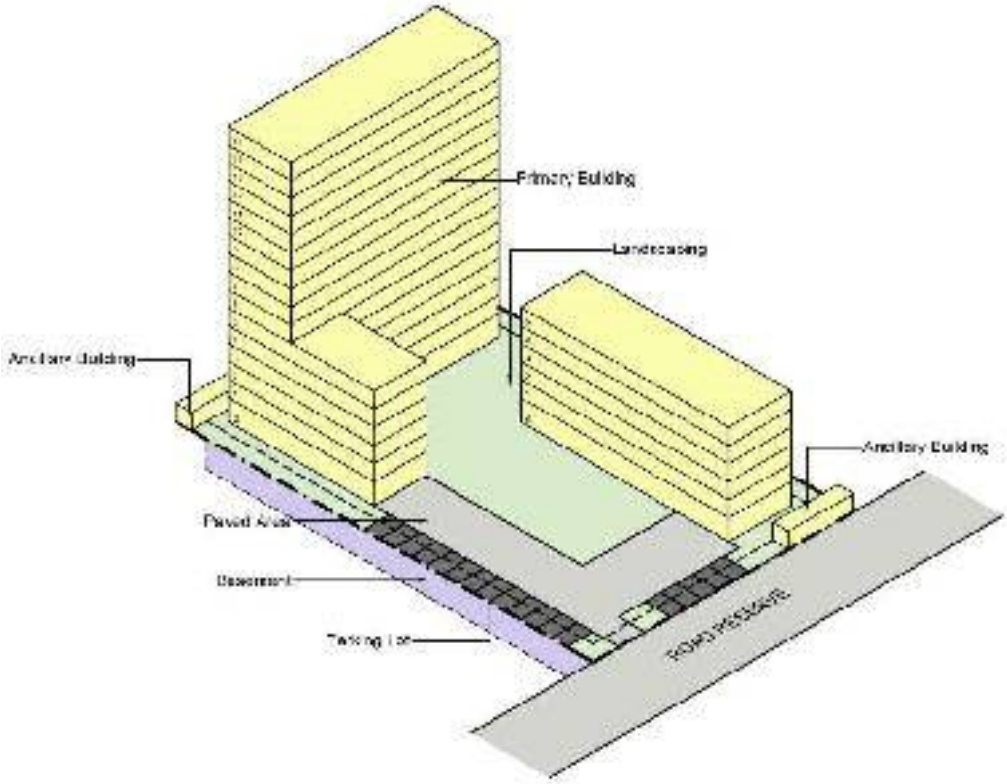
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Annexure II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical, solar equipment:
	  • Shall be located to the side or rear of the building
	  • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and do not impede circulation
	• At grade or rooftop water tank, mechanical and telecommunications equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities	



6.0 PARKING		
6.1 Location	• Required parking slots shall be provided within the lot boundary	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor parking accessible to specially abled.	• Visitors parking should have provision for disable parking in the apartment complex.	
6.5 Minimum Dimensions	• Refer Chapter V	
6.6 Minimum Shaded Areas	• At least one covered vehicular drop-off point should be provided.	
6.7 Circulation in Parking	• Clearly designated and marked parking stalls, driveways and sidewalks within the parking lots shall be provided	
6.8 Vehicular Access to Parking Lot	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by CRDA or other relevant authorities	
7.0 FENCING		
7.1 Location	• Fencing and walls in the front, side and rear yards shall be at the perimeter of the lot	

7.2 Heights	• Front fencing or walls shall not exceed2 m and rear/side fencing wall shall not exceed 2 m in height
	• Additional height
	  • Shall be evaluated on case-by-case basis by CRDA or other relevant authorities
	  • Front fencing or walls shall conform with the height on directly adjacent lots	



7.3 Materials	• The front boundary wall • Materials and design should allow for 50% transparency.	
8.0 CIRCULATION		
8.1 Pedestrian	• Pedestrian circulation shall link all buildings and amenities on site • All pedestrian circulation shall be accessible to the specially abled.	
8.2 Public Transit	• Refer Appendix II.	
9.0 SIGNAGE		
9.1 Permitted	• Two signs shall be permitted one along the fencing wall and the other within the front setback • A Maximum of 1.5 m height x 7 m length of signage shall be permitted • Protrusion of the signage must be contained within plot boundary	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as Organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Decks as recreational facility	Refer Appendix II.

902.Figure: Illustration of High Density Zone – High Density Apartment (R4)

1005.Mixed Use Commercial Zone (C1)

	REGULATION	REMARKS
These regulations shall apply to: • All new and redeveloped commercial uses within the Mixed Use Commercial Zone (C1) • Lots zoned or re-zoned for commercial uses within the Mixed Use Commercial Zone (C1)		
1.0 USES		
1.1 Permitted Uses	• Maximum commercial quantum control of 30% of the total allowable gross floor area. • Multi-family residential apartments above 1st or 2nd floor • For detail list of uses refer to Appendix I	
1.2 Conditional Uses	• All permitted uses in R1 and R2 zone. • Non-polluting industries units machinery up to 10 HP • For detail list of uses refer to Appendix I	
1.3 Prohibited Uses	• Large scale independent commercial complex • All type of industrial uses • Major infrastructure installations • Commercial uses that cause or are likely to cause disamenity to the residents are not allowed. For example, nightclubs and karaoke lounges may only be allowed on a case-by-case basis. • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Electrical substation (ESS) • Refuse area • Swimming Pool • For detail list of uses refer to Appendix I	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• 50% maximum	
2.3 No. Of Basements	• Refer Appendix II	
2.4 Maximum Floor Space Index(FSI)	• 3.5 maximum	
2.5 Sustainable construction methods	• Sustainable building design technology and sustainable construction methods are encouraged. • Roof top communal facilities or roof gardens can be provided.	

3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• G+5 for any other. • G+8(High Rise Apartments) maximum • G (ancillary buildings) maximum	The resultant building height must also comply with the technical height controls imposed by other authorities such as aviation path restrictions, telecommunication and military installations.
3.2 Floor to Floor Height	• Ground Floor -3.6m maximum • Other Floors – 3 m maximum	
3.3 Building Form	• Most common form is commercial podium with apartment tower block • Pure tower block • Attached buildings • Residential component may also be physically separated from the commercial use	The building form depends on the location of the site and street block plans for the area.

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Conversion of a residential structure to other permitted uses shall be considered subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II.	
4.2 Basement Setback	• Refer Appendix II.	
4.3 Ancillary Buildings	Refer Appendix II.	
4.4 Between Multiple Buildings on the Same Lot	• Refer Appendix II.	

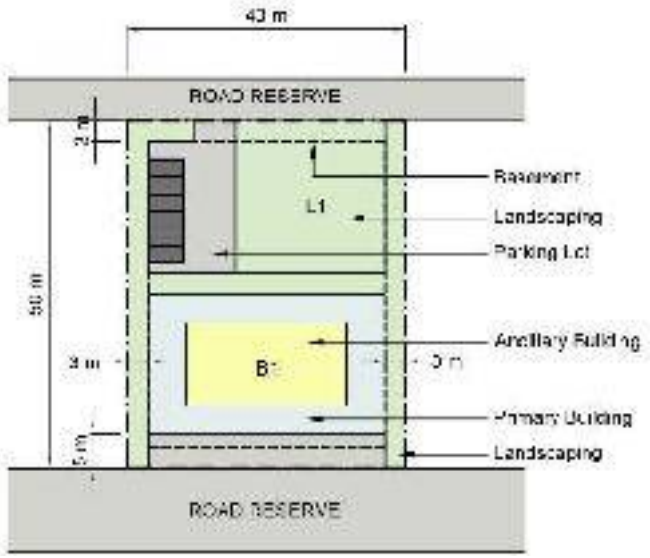
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Loading docks, if any, shall be located to the rear or side of the building. • Where the rear of the building faces residential uses, the loading area must be appropriately screened so as not to be visible from residential uses	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	  • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and do not impede circulation
	• At grade or rooftop water tank, mechanical and telecommunications equipment:
	  • Shall be screened subject to approval by CRDA or other relevant authorities
	  • Shall not be visible from street	

6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary	
6.2 Surfacing	• Parking shall hard paved surface and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor Parking accessible to specially abled.	• Refer Appendix II.	
6.5 Minimum Dimensions	• Refer Chapter V	
6.6 Minimum Shaded Areas	• Refer Appendix II.	
6.7 Circulation in Parking	• Clearly designated and marked parking spaces, driveways and sidewalks within the parking lots shall be provided	
6.8 Vehicular Access to Parking Lot	• Only one ingress-egress point to the development plot is allowed. • To be taken from the rear service road. Access from the main street is discouraged.	

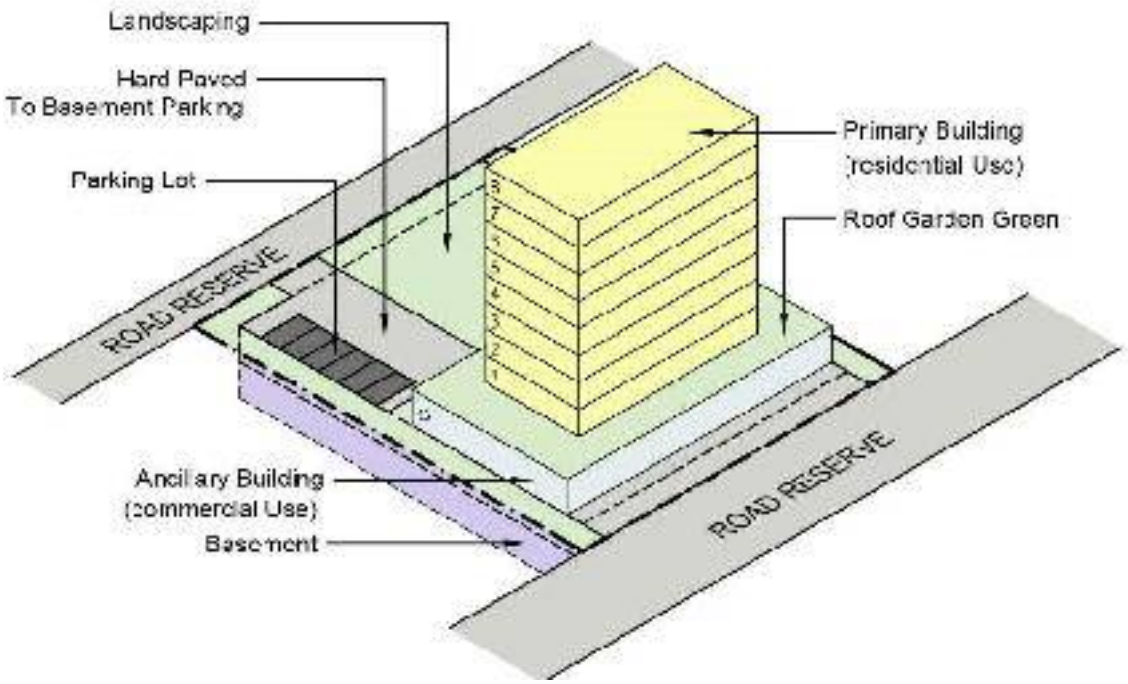
7.0 FENCING		
7.1 Location	Refer Appendix II.	
7.2 Heights	Refer Appendix II.	
8.0 CIRCULATION		
8.1 Pedestrian	• 2m(min) covered publicly accessible pedestrian walkway/ covered arcade shall be provided along the perimeter of the buildings fronting the main roads • Pedestrian circulation shall link all buildings and amenities on site • Throughout the site development, all pedestrian linkages shall be a minimum 1.5m wide • All pedestrian circulation shall be accessible to the disabled	
9.0 SIGNAGE		

9.1 Permitted	• One building identification sign shall be permitted on the tower
	• One Commercial sign per tenant shall be permitted:
	  • Wall Signage (15% of the Building Face or 9 m^2 whichever less)
	  • Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less)
	  • Awning Signage (Min 2.5m clearance from ground and 25% of the building face or 2.5m^2 whichever less)	



9.2 Prohibited	• The following signs are prohibited:
	  • Roof mounted signs
	  • String lights, flashing, excessively bright lights
	  • Off-site signage	

9.3 Location	• Individual signs for commercial tenants within a multi-tenanted commercial development shall be mounted to the façade of the development • Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback	
9.4 Lighting	• No flashing lights are allowed	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	



10.2	5% of Plot area asOrganised open space for recreation	Refer Appendix II.	
10.3	Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4	Maintenance	Refer Appendix II.	
10.5	Decks as recreational facility	Refer Appendix II.

1006.General Commercial Zone (C2)

	REGULATION	REMARKS
These regulations shall apply to: • All new and redeveloped commercial uses within the General Commercial Zone (C2) • Lots zoned or re-zoned for commercial uses within the General Commercial Zone (C2)		
1.0 USES		
1.1 Permitted Uses	• Residential uses as shown per Appendix I	
1.2 Conditional Uses	• Public facilities • Petrol stations • Apartment (on the 2nd storey and above) with min. 12 m wide road access. • All permitted uses in C1 zone. • Residential uses as shown per Appendix I • Non-polluting industries units machinery up to 10 HP • Construction material store should be showroom type and no storage is allowed either in open or closed area. • Cinema halls/multiplex shall be allowed for plots abutting to 18m width road and minimum 3000 sqm plot.	Refer appendix for regulations regarding facilities
1.3 Prohibited Uses	• All types of industrial uses • Large scale commercial uses such as shopping centres, hyper-marts, showrooms, offices etc. • Major infrastructure • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Electrical substation (ESS) • Refuse area • For detail list of uses refer to Appendix I	
2.0 COVERAGE		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II.	
2.3 No. of Basements	Refer Appendix II.	
2.4 Maximum Floor Area Ratio (FAR)	Refer Appendix II.	
3.0 BUILDABLE AREA (COVERAGE)		
3.1 Maximum Number of Floors	• Refer Appendix II.	
3.2 Floor to Floor Height	• Ground Floor - 4m maximum • Other Floors - 3m maximum	
3.3 Building Form	• Free Standing Buildings • Shop houses	

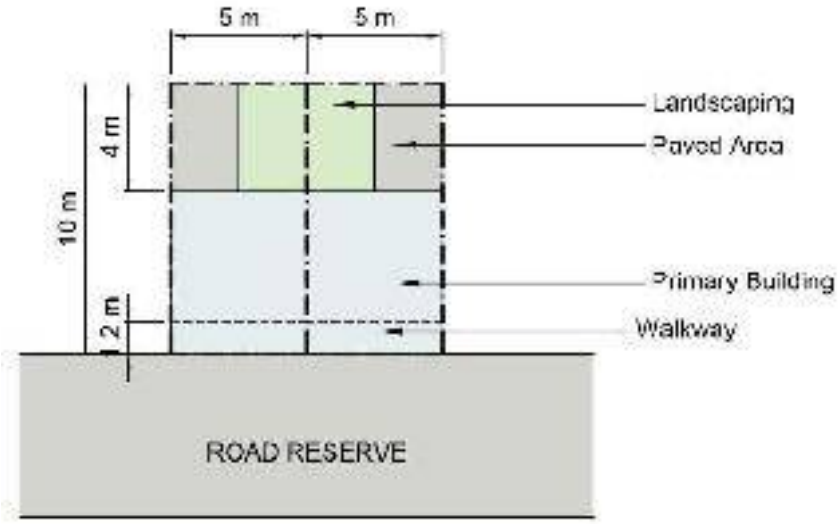
	REGULATION	REMARKS

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Conversion of a residential structure to other permitted uses shall be considered subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	Refer Appendix II.	
4.2 Basement Setback	Refer Appendix II.	
4.3 Ancillary Buildings	Refer Appendix II.	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II.	
5.0 SERVICE AREAAND EQUIPMENT		
5.1 Loading Docks	Refer Appendix II.	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	  • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and they do not impede circulation
	• At grade or rooftop water tank, mechanical and telecommunications equipment:
	  • Shall be screened subject to approval by CRDA or other relevant authorities	

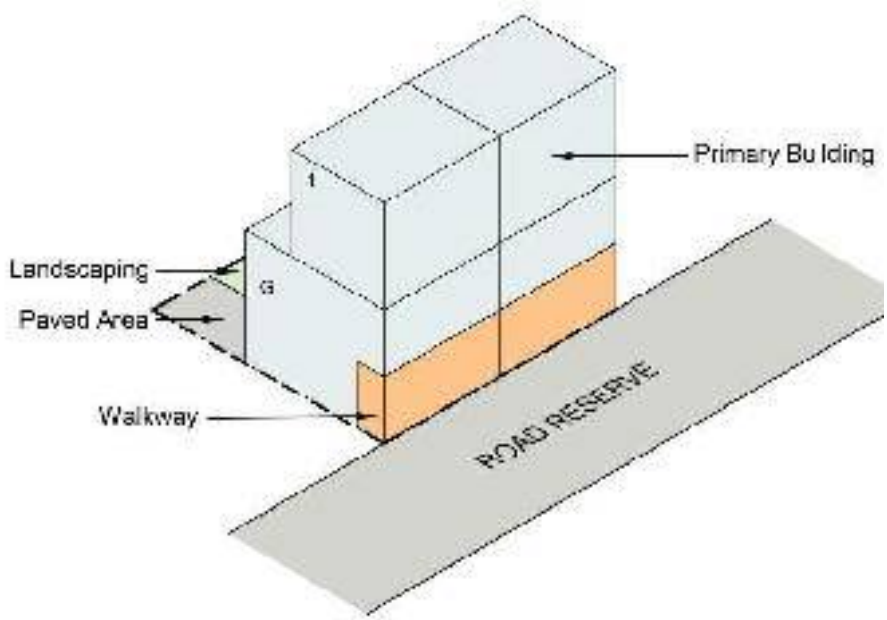
	REGULATION	REMARKS
6.0 PARKING		
6.1 Location	• Refer Appendix II.	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	Refer Appendix II.	
6.4 Visitors parking accessible for specially disabled	• Refer Appendix II.	
6.5 Minimum Dimensions	Refer Chapter V.	
6.6 Minimum Shaded Areas	• Refer Appendix II.	
6.7 Circulation in Parking	• Clearly designated and marked parking spaces, driveways and sidewalks within the parking lots shall be provided	
6.8 Vehicular Access to Parking Lot	• Only 1 vehicular ingress and egress point shall be allowed. Additional vehicular ingress and egress point shall be evaluated on a case-by-case basis by CRDA or other relevant authorities • To be taken from the rear service road. Access from the main street is discouraged.	
7.0 FENCING		
7.1 Location	• Refer Appendix II.	
7.2 Heights	• Refer Appendix II.	
7.3 Materials	• Refer Appendix II.	
8.0 CIRCULATION		
8.1 Pedestrian	• Pedestrian circulation between adjacent buildings and amenities shall be seamlessly connected; the linkages shall be min 2 m in width. • All pedestrian circulation shall be accessible to the disabled	
8.2 Public Transit	• Integration of bus transit facility into the C2 Zone is encouraged	



9.0 SIGNAGE		

9.1 Permitted	• One Building identification sign shall be permitted. One Commercial sign per tenant shall be permitted:
	  • Wall Signage (15% of the Building Face or 9 m whichever less)
	  • Window Signage (Transparent, 15% of the Building Face or 2.5m² whichever less)
	  • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m² whichever less)
	  • Free Standing Signage (Maximum 1.5 m height)	

9.2 Prohibited	• The following signs are prohibited:
	  • Roof mounted signs
	  • String lights, flashing, excessively bright lights
	  • Off-site signage	



9.3 Location	• Individual signs for commercial tenants within a multi-tenanted commercial development shall be mounted to the façade of the development • Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback	
9.4 Lighting	• N/A	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area asOrganised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Decks as recreational facility	Refer Appendix II.

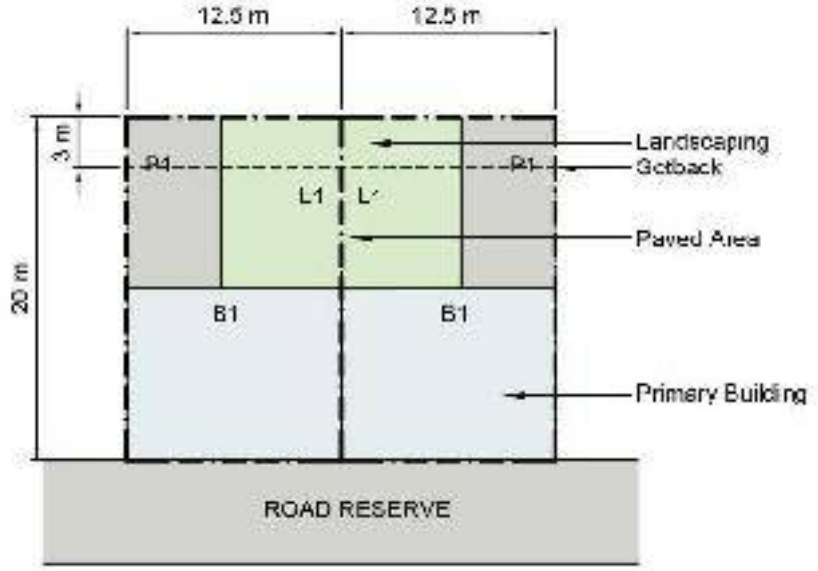
4.1 Building (Above Grade)	• Refer Appendix II.	
4.2 Basement Setback	• Refer Appendix II.	
4.3 Ancillary Buildings	• Refer Appendix II.	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II.	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II.	
5.2 Outdoor Storage	• No outdoor storage area shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	  • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and they do not impede circulation
	• At grade or rooftop water tank, mechanical and telecommunications, solar equipment:
	  • Shall be screened subject to approval by CRDA or other relevant authorities	

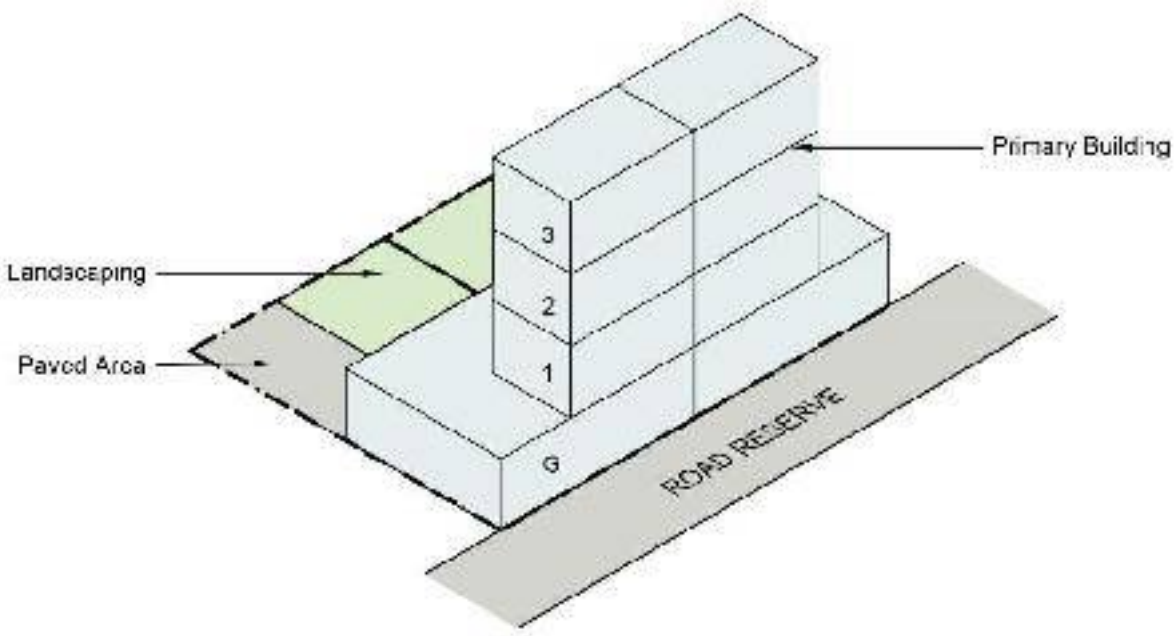
6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary • Refer Appendix II.	
6.2 Surfacing	• Parking shall be soft paved and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor parking accessible to specially abled	• Refer Appendix II.	
6.5 Minimum Dimensions	• Refer Chapter V.	
6.6 Minimum Shaded Areas	• Refer Appendix II.	
6.7 Circulation in Parking	• Clearly designated and marked parking spaces, driveways and sidewalks within the parking lots shall be provided	
6.8 Vehicular Access to Parking Lot	• Only 1 vehicular ingress and egress point shall be allowed. Additional vehicular ingress and egress point shall be evaluated on a case-by-case basis by CRDA or other relevant authorities • To be taken from the rear service road. Access from the main street is discouraged.	
7.0 FENCING		
7.1 Location	• Fencing and walls are not permitted along the front setback • Fencing and walls in the side and rear yards shall be at the perimeter of the lot	
7.2 Heights	• 2 m high solid perimeter fencing wall is allowed at the side and rear of the lot	
7.3 Materials	• N/A	
8.0 CIRCULATION		
8.1 Pedestrian	• Pedestrian circulation between adjacent buildings and amenities shall be seamlessly connected; the linkages shall be min 2 m in width. • All pedestrian circulation shall be accessible to the disabled	
8.2 Public Transit	• Integration of bus transit facility into the C3 Zone is encouraged	



9.0 SIGNAGE		

9.1 Permitted	• One Building identification sign shall be permitted:
	  • Wall Signage (15% of the Building Face or 9 m whichever less)
	  • Window Signage (Transparent, 15% of the Building Face or 2.5m² whichever less)
	  • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m² whichever less)
	• Free Standing Signage (Maximum 1.5 m height)	

9.2 Prohibited	• The following signs are prohibited:
	  • Roof mounted signs
	  • String lights, flashing, excessively bright lights
	  • Off-site signage	



9.3 Location	• Individual signs for commercial tenants within a multi-tenanted commercial development shall be mounted to the façade of the development • Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback	
9.4 Lighting	• N/A	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area asOrganised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Minimum % of green coverage	Refer Appendix II.

1008.Town Centre Zone (C4)

	REGULATION	REMARKS
These regulations shall apply to: • All new and redeveloped commercial uses within the Town Centre Zone (C4) • Lots zoned or re-zoned for commercial uses within the Town Centre Zone (C4)		
1.0 USES		
1.1 Permitted Uses	• For detail list of uses refer to Appendix I	Ground floor use have to be activity-generating uses
1.2 Conditional Uses	• Public facilities • Petrol stations • Residential flats with commercial at ground floor • Rapid transit station • Clinics • All permitted uses in C1, C2 and C3 zone • Residential uses as shown per Appendix I • For detail list of uses refer to Appendix I	
1.3 Prohibited Uses	• All type of industrial uses • Major infrastructure installations • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Electrical substation • Refuse area • For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• 1,000 m^2	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II	
2.3 No. Of Basements	• Refer Appendix II	
2.4 Maximum Floor Space Index(FSI)	• 5.0Global FSI (maximum as per approved urban design proposals)	
2.5 Sustainable construction methods	• The following measures are encouraged: • Sustainable building design technology and sustainable construction methods • Roof top communal facilities or roof gardens	

	REGULATION	REMARKS
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• Conditional to consumption of Global FSI	
3.2 Floor to Floor Height	• Ground Floor - 4m maximum • Other Floors - 3m maximum	
3.3 Building Form	• Free standing or attached	

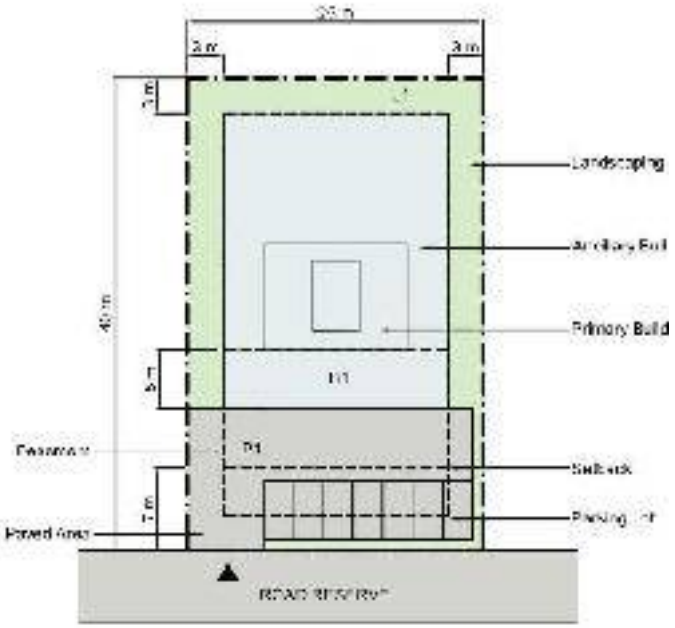
3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II	
4.2 Basement Setback	Refer Appendix II	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	• Refer Appendix II	
5.0 SERVICE AREAAND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

	REGULATION	REMARKS

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	• At grade or rooftop water tank, mechanical and telecommunications, solar equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities
	  • Shall not be visible from any street	

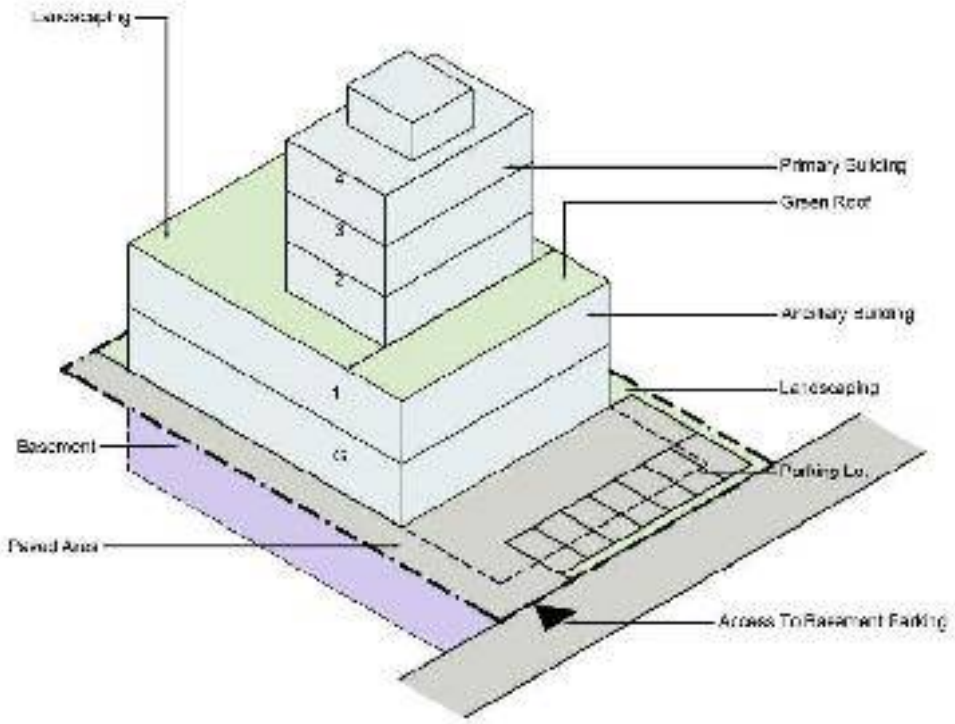
6.0 PARKING		
6.1 Location	• Refer Appendix II.	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor parking accessible to specially abled	• Refer Appendix II	
6.5 Minimum Dimensions	• Refer Chapter V	
6.6 Minimum Shaded Areas	• Refer Appendix II	
6.7 Circulation in Parking	• Refer Appendix II	
6.8 Vehicular Access to Parking Lot	• Refer Appendix II	
7.0 FENCING		
7.1 Location	• Refer Appendix II	
7.2 Height	• Refer Appendix II	
7.3 Material	• Hotel/ resort: solid fencing material that complements architecture style of the building. • Refer Appendix II	
8.0 CIRCULATION		
8.1 Pedestrian	• Refer Appendix II . • All pedestrian circulation shall be accessible to the disabled	
8.2 Public Transit	• The use of public transit should be encouraged through the integration of a public transport stop into the commercial development lot • Refer Appendix II . • A pedestrian linkage should be provided from the main building to the bus shelter located in front of the commercial lots (where applicable)	



9.0 SIGNAGE		

9.1 Permitted	• One Building identification sign shall be permitted on the tower
	• One Commercial Sign per tenant shall be permitted:
	  • Wall Signage (15% of the Building Face or 9 m^2 whichever less)
	  • Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less)
	  • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m^2 whichever less)	

9.2 Prohibited	• The following signs are prohibited:
	  • Roof mounted signs
	  • Off-site signage	



9.3 Location	• Individual signs for commercial tenants within a multi-tenanted commercial development shall be mounted to the façade of the development • Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback	
9.4 Lighting	• No flashing lights are allowed	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area asOrganised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Minimum % of green coverage	Refer Appendix II.

	REGULATION	REMARKS
These regulations shall apply to: • All new and redeveloped commercial uses within the Regional CentreZone(C5) • Lots zoned or re-zoned for commercial uses within the Regional CentreZone (C5)		
1.0 USES		
1.1 Permitted Uses	• For detail list of uses refer to Appendix I	Ground floor use have to be activity-generating uses .
1.2 Conditional Uses	• For detail list of uses refer to Appendix I • Public facilities • Petrol stations • Residential flats with commercial at ground floor • Rapid transit station • Clinics • All permitted uses in C1, C2 , C3 and C4 zone • Residential uses as shown per Appendix I • Construction material store should be showroom type and no storage is allowed either in open or closed area.	Refer land use plan for guidance on location of facility Refer appendix for regulations regarding facilities
1.3 Prohibited Uses	• All type of industrial uses • Major infrastructure installations • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Electrical substation • Refuse area • For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• 1,000 m^2	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II	
2.3 No. Of Basements	• Refer Appendix II	
2.4 Maximum Floor Space Index(FSI)	• 5.0Global FSI (maximum as per approved urban design proposals)	

	REGULATION	REMARKS
2.5 Sustainable construction methods	• The following are encouraged: • Sustainable building design technology and sustainable construction methods • Roof top communal facilities or roof gardens	
3.0 BUILDABLE TYPE		
3.1 Maximum Number of Floors	• Conditional to consumption of Global FSI	
3.2 Floor to Floor Height	• Ground Floor - 5m maximum • Other Floors - 4m maximum	
3.3 Building Form	• Free standing or attached	

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Conversion of a residential structure to other permitted uses shall be considered subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II	
4.2 Basement Setback	• Refer Appendix II)	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	• Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	

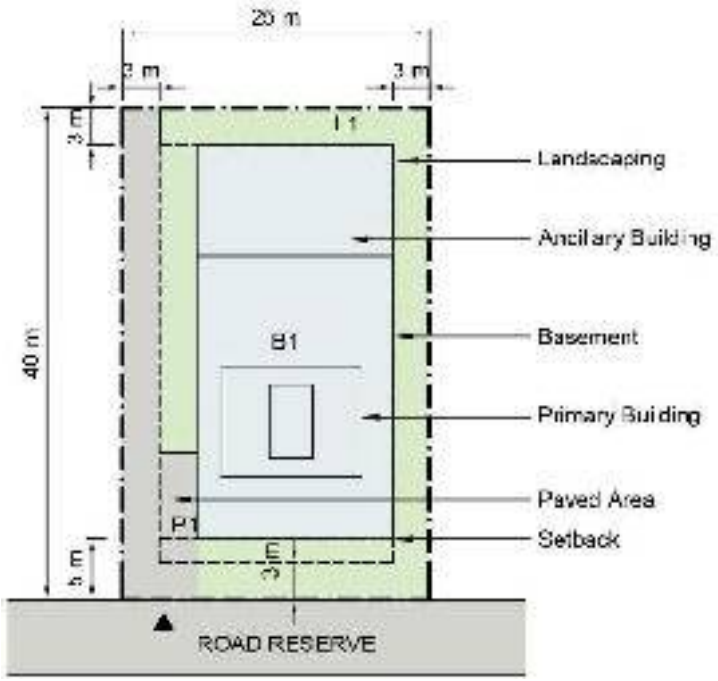
	REGULATION	REMARKS
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	  • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and they do not impede circulation
	• At grade or rooftop water tank, mechanical and telecommunications , solar equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities
	  • Shall not be visible from any street	

6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary • Parking Ht. is permitted up to 4m • Basement parking is encouraged.	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor Parking accessible to specially abled	• Refer Appendix II	
6.5 Minimum Dimensions	• Refer Chapter V	
6.6 Minimum Shaded Areas	• Refer Appendix II	
6.7 Circulation in Parking	• Refer Appendix II	
6.8 Vehicular Access to Parking Lot	• Refer Appendix II	
7.0 FENCING		
7.1 Location	• Refer Appendix II	
7.2 Heights	• Hotel/ resort: 2.0 (max). • Refer Appendix II	
7.3 Materials	• Hotel/ resort: solid fencing material that complements architecture style of the building. • Refer Appendix II	

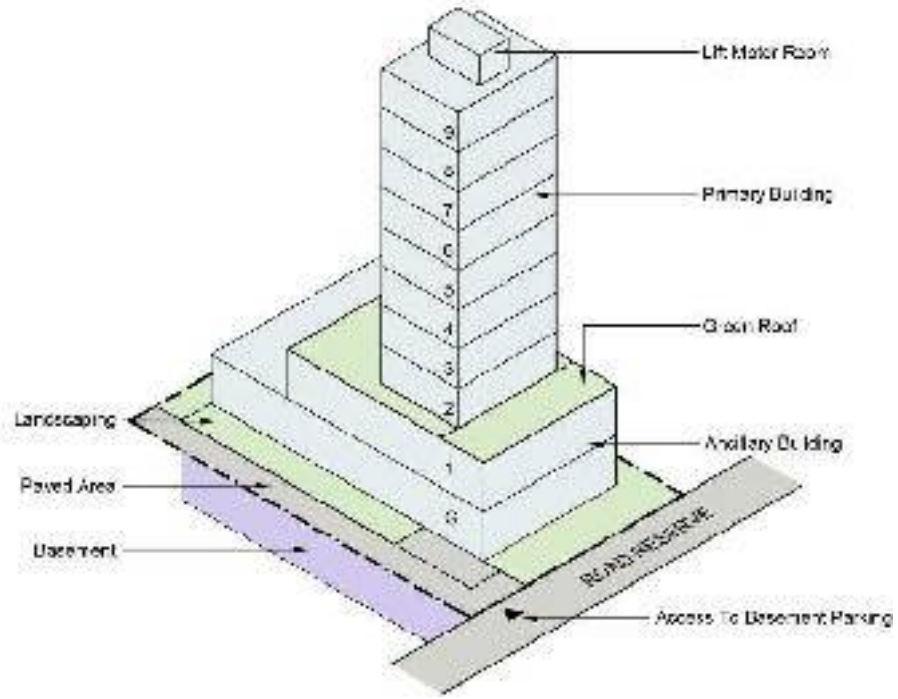
8.0 CIRCULATION		
8.3 Pedestrian	• Refer Appendix II . • All pedestrian circulation shall be accessible to the disabled	
8.4 Public Transit	• The use of public transit should be encouraged through the integration of a public transport stop into the commercial development lot • Minimum 1 taxi stand for at least 2 taxis shall be provided within lot boundary. • A pedestrian linkage should be provided from the main building to the bus shelter located in front of the commercial lots (where applicable)	
9.0 SIGNAGE		

9.1 Permitted	• One Building identification sign shall be permitted on the tower
	• One Commercial Sign per tenant shall be permitted:
	  • Wall Signage (15% of the Building Face or 9 m^2 whichever less)
	  • Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less)
	  • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m^2 whichever less)	



9.2 Prohibited	• The following signs are prohibited:
	  • Roof mounted signs
	  • Off site signage	

9.3 Location	• Individual signs for commercial tenants within a multi-tenanted commercial development shall be mounted to the façade of the development • Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback	
9.4 Lighting	• No flashing lights are allowed	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	



10.5	Minimum % of green coverage	Refer Appendix II.

1010.Central Business District zone (C6)

	REGULATION	REMARKS
These regulations shall apply to: • All new and redeveloped commercial uses within the Central Business District zone (C6) • Lots zoned or re-zoned for commercial uses within the Central Business District zone (C6)		
1.0 USES		
1.1 Permitted Uses	• For detail list of uses refer to Appendix I	Ground floor use have to be activity-generating uses
1.2 Conditional uses	• Public facilities • Petrol stations • Residential flats with commercial at ground floor • Rapid transit station • Clinics • All permitted uses in C1, C2 , C3, C4 and C5 zone. • Residential uses as shown per Appendix I • For detail list of uses refer to Appendix I	
1.3 Prohibited Uses	• All type of industrial uses • Major infrastructure installations • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Electrical substation • Refuse area • For detail list of uses refer to Appendix I	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II	
2.3 No. Of Basements	• Refer Appendix II	
2.4 Maximum Floor Space Index(FSI)	• 5.0Global FSI (maximum as per approved urban design proposals)	
2.5 Sustainable construction methods	• The following shall be encouraged: • Sustainable building design technology and sustainable construction methods • Roof top communal facilities or roof gardens	

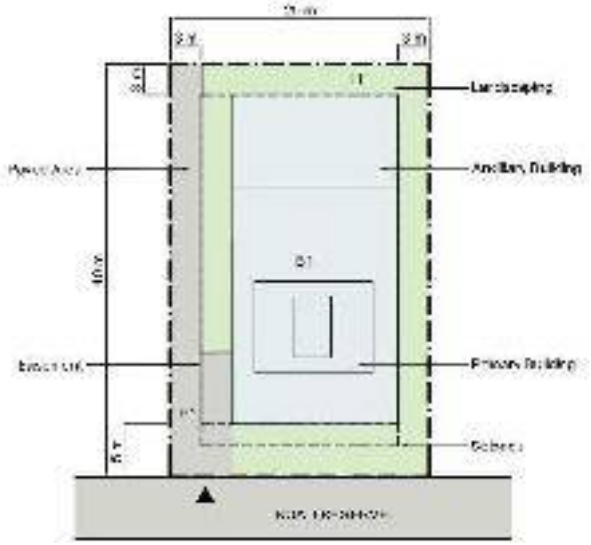
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• Conditional to consumption of Global FSI	
3.2 Floor to Floor Height	• Ground Floor - 5m maximum • Other Floors - 4m maximum	
3.3 Building Form	• Free standing or attached	

3.4 Existing Buildings	• Additions and alterations necessary to retain an existing approved legally non-conforming building and its use in good order and repair will be allowed, subject to:
	  • No material change in use which does not comply with the prevailing zoning regulations;
	  • No further increase in floor area of the existing non-conforming use
	• Any additional floor area required for the non-conforming use will:
	• Conversion of a residential structure to other permitted uses shall be considered subject to:
	  • Compliance with parking requirements for non-residential use
	  • Removal of the front boundary wall; and
	  • Aesthetic enhancement of the front elevation of the building	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	Refer Appendix II	When facing public road, has to follow the road buffer requirement.
4.2 Basement Setback	Refer Appendix II	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	• Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	  • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and they do not impede circulation
	• At grade or rooftop water tank, mechanical and telecommunications, solar equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities
	  • Shall not be visible from any street	

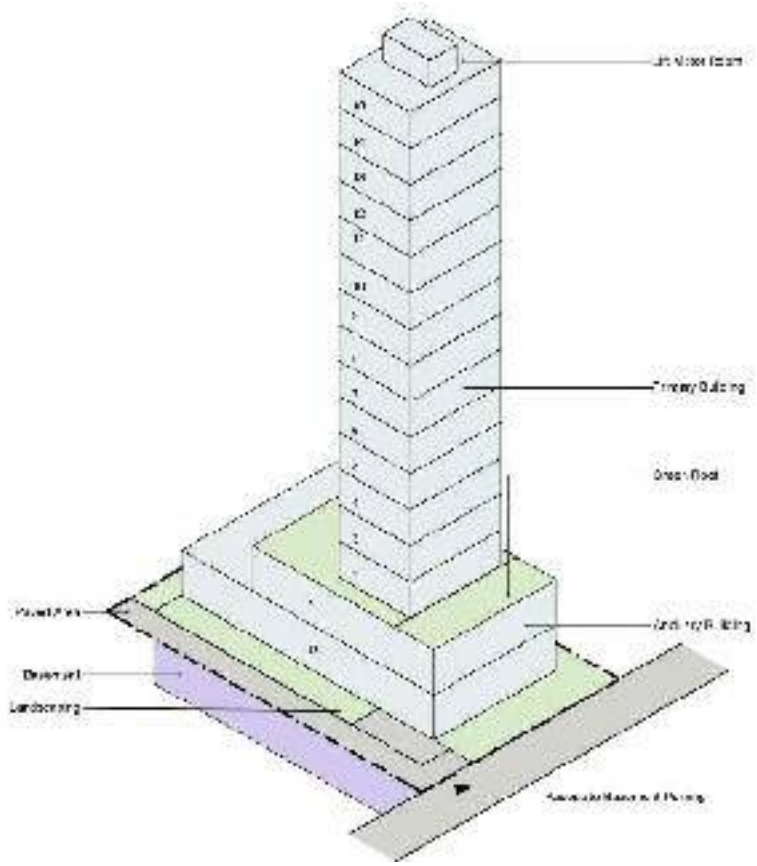
6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary • Refer Appendix II	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor parking accessible to specially abled.	• Refer Appendix II	
6.5 Minimum Dimensions	• Refer Chapter V	
6.6 Minimum Shaded Areas	• Refer Appendix II	
6.7 Circulation in Parking	• Refer Appendix II	
6.8 Vehicular Access to Parking Lot	• Refer Appendix II	
7.0 FENCING		
7.1 Location	• Refer Appendix II	
7.2 Heights	• Refer Appendix II	
7.3 Materials	Refer Appendix II	
8.0 CIRCULATION		
8.5 Pedestrian	• Refer Appendix I. • I Pedestrian circulation between adjacent buildings and amenities shall be seamlessly connected; • All pedestrian circulation shall be accessible to the disabled	
8.6 Public Transit	• The use of public transit should be encouraged through the integration of a public transport stop into the commercial development lot • Refer Appendix II.	



9.0 SIGNAGE		

9.1 Permitted	• One Building identification sign shall be permitted on the tower
	• One Commercial Sign per tenant shall be permitted:
	  • Wall Signage (15% of the Building Face or 9 m^2 whichever less)
	  • Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less)
	  • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m^2 whichever less)	

9.2 Prohibited	• The following signs are prohibited:
	  • Roof mounted signs
	  • Off site signage	



9.3 Location	• Individual signs for commercial tenants within a multi-tenanted commercial development shall be mounted to the façade of the development • Permitted free standing signage shall not exceed 5m in height, and may be located within the front setback	
9.4 Lighting	• No flashing lights are allowed	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Minimum % of green coverage	Refer Appendix II.

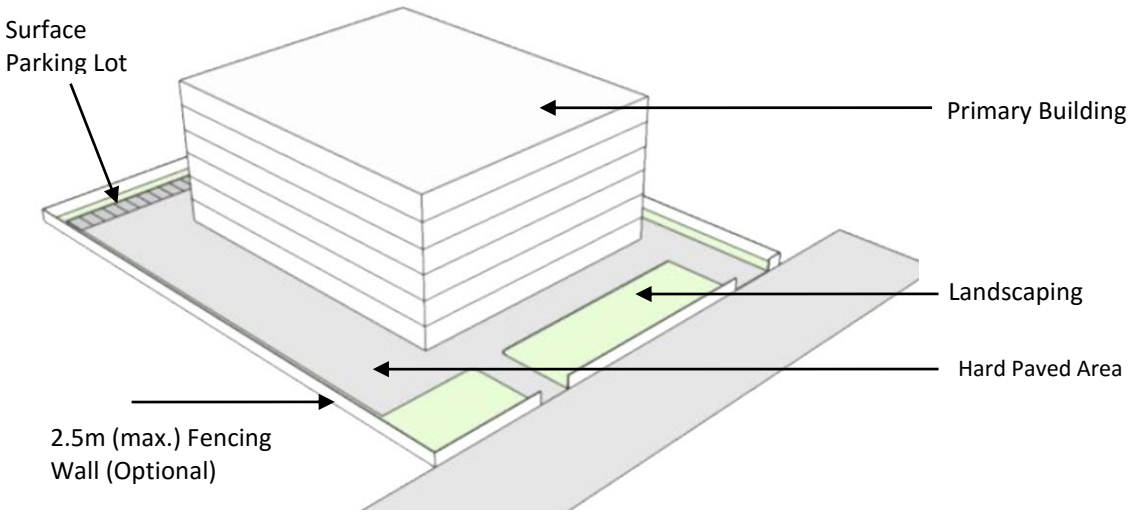
1011. Business Park Zone(I1)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped uses within the Business Park Zone (I1)		
1.0 USES		
1.1 Permitted Uses	• For detail list of uses refer to Appendix I	
1.2 Conditional uses	• For detail list of uses refer to Appendix I	
1.3 Prohibited Uses	• For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Ancillary office • Security facilities • Showroom • Banking services/ ATM/ clinics • Staff Canteen • For detail list of uses refer to Appendix I	The ancillary use quantum must not exceed 20% of the total GFA.
1.5 Secondary Uses	• Independent Amenity Centre / Childcare centre	500 m walking radii
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum land area	5 Ha	
2.2 Maximum Building Coverage	40%	
2.3 No. Of Basements	Refer Appendix II	
2.4 Maximum Floor Area Ratio (FAR)	1.6	
2.5 Sustainable construction methods	The following are encouraged: • Sustainable building design technology and sustainable construction methods • Roof top communal facilities or roof gardens • 10% additional GFA allowed within 300 m belt/radius from/of MRT/LRT stations	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	Refer Appendix II	
3.2 Floor to Floor Height	• Case-to-case basis	
3.3 Building Form	Refer Appendix II	
4.0 SETBACK (Minimum)		

	Regulation	Remarks
4.1 Building (Above Grade)	• Refer Appendix II	Boundary fronting public road need to follow the road buffer requirement.
4.2 Basement Setback	• Refer Appendix II	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	Loading docks, if any, shall be located to the side/ rear of the building subject to fire norms.	
5.2 Outdoor Storage Areas	No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	Proper location of the outdoor refuse areas shall be decided by the relevant local authorities upon review of the development application.	
5.4 Mechanical Equipment	At grade water tank and mechanical equipment: • Shall be located to the side or rear of the building • May be located in the setback provided a minimum of 2 m is maintained free of obstruction and they do not impede circulation At grade or rooftop water tank, mechanical and telecommunications, solar equipment : • Shall be screened subject to approval by the relevant local authorities • Shall not be visible from any street	
6.0 PARKING		
6.1 Location	• Surface Parking should be minimum • Basement Parking & Multi-storey car parking are encouraged.	
6.2 Surface Parking	Parking shall be hard or semi perforated surfaced with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor Parking accessible to specially abled	• Refer Appendix II	
6.5 Minimum Dimensions	Refer Chapter V	

	Regulation	Remarks
6.6 Minimum Shaded Areas	Should follow urban design guidelines.	
6.7 Circulation in Parking	• Clearly designated and marked parking spaces, driveways and sidewalks within the parking lots shall be provided. • Pedestrian circulation pathways should be provided, linking both the site access and the building.	
6.8 Vehicular Access to Parking Lot	Refer Appendix II	
7.0 FENCING		
7.1 Location	• Plantation along lot boundary. • E-security and surveillance is encouraged instead of physical boundary walls. • Refer Appendix II	
7.2 Materials	• The use of visually permeable materials is recommended all around the development lot subject to detailed urban design and evaluation.	
8.0 CIRCULATION		
8.1 Pedestrian	• Covered pedestrian walkways shall be provided along the perimeter of the buildings fronting the main roads • Refer Appendix II • All pedestrian circulation shall be accessible to the disabled	
8.2 Public Transit	• Refer Appendix II	
9.0 SIGNAGE		
9.1 Permitted	• One Building identification sign shall be permitted on the tower • One Commercial Sign per tenant shall be permitted: - Wall Signage (15% of the Building Face or 9 m^2 whichever less) - Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less) - Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m^2 whichever less)	
9.2 Prohibited	The following signs are prohibited: • Roof mounted signs • String lights, flashing, excessively bright lights	
9.3 Location	Signs shall not obstruct views, vistas or important landmarks	
9.4 Lighting	Lighting shall be aesthetically pleasing and in keeping with the overall theme of the development	



10.0	**GREEN COVERAGE**		
10.1	Minimum % of green coverage	Refer Appendix II.	
10.2	5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3	Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4	Maintenance	Refer Appendix II.	
10.5	Minimum % of green coverage	Refer Appendix II.	

BUSINESS PARK ZONE (I1):

PLAN (Not to scale)

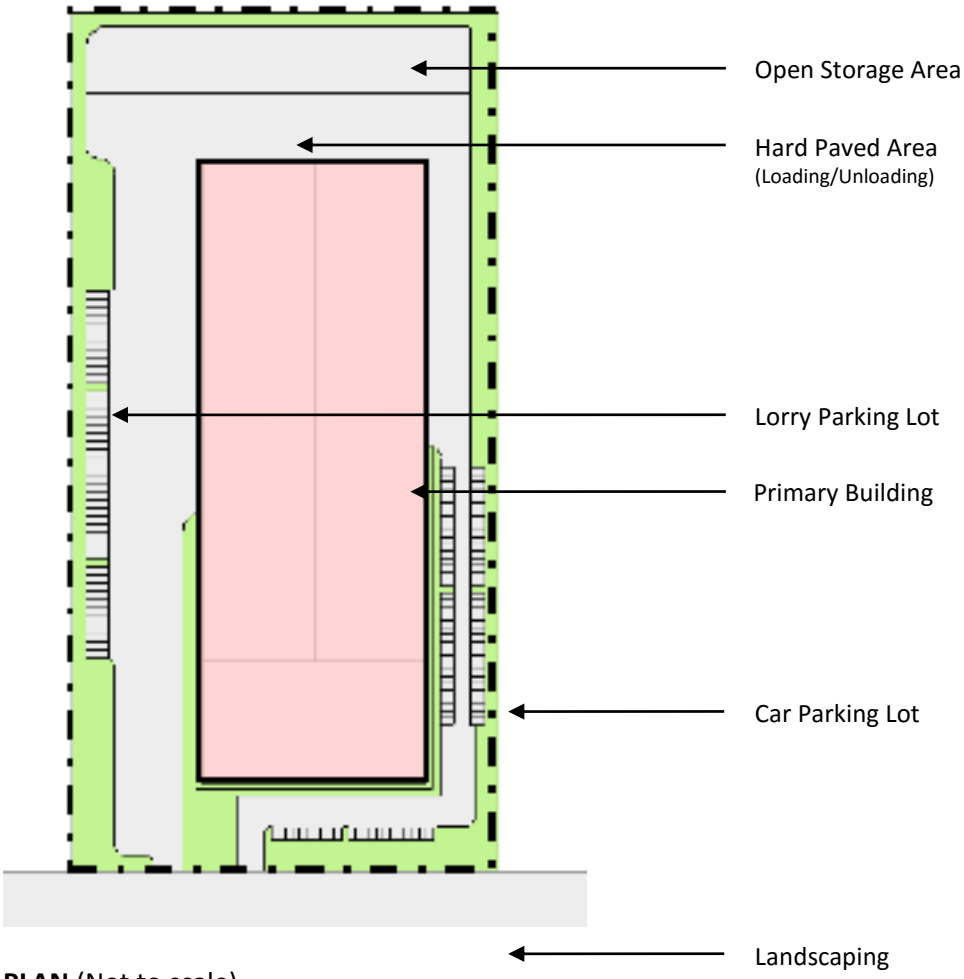
ISOMETRIC VIEW (Not to scale)

Figure: Illustration of Business Park District (I1)

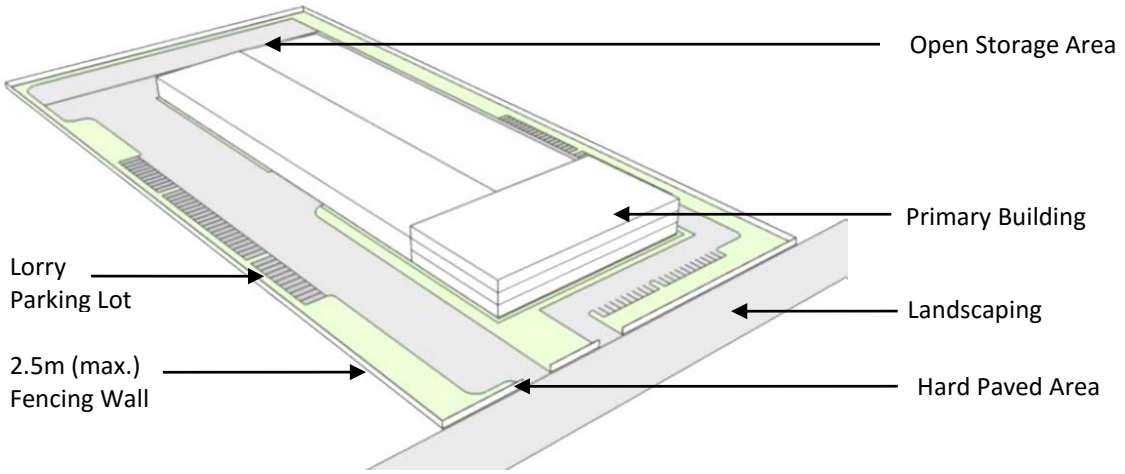
1012.Logistics Zone (I2)

	Regulation	Remarks
These regulations shall apply to: • All new, redeveloped and re-zoned permitted uses within the Logistics (I2)		
1.0 USES		
1.1 Permitted Uses	• Regional warehouses • Heavy distribution warehouses • Rack supported warehouses • Bulk handling warehouses • Refrigerated Warehouses • Factory outlets & wholesale warehouse • Customs services • High-rise stack up warehouses • For detail list of uses refer to Appendix I	Predominant use. These uses shall be at least 60% of the total GFA.
1.2 Conditional uses	• Religious facilities • Workers' accommodation • Selected commercial activities • Wholesale markets such as grain, vegetables, flower, spices etc. • Automobile showrooms / service centre • Container stack-yards/ open storage based on locational suitability • Heavy vehicle parking • For detail list of uses refer to Appendix I	These uses must not exceed 40% of the overall GFA.
1.3 Prohibited Uses	• All type of polluting manufacturing and fabrication industries and production houses • All type of residential uses • Retail facilities • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• Electrical substation (ESS) • Refuse area • Management Office, meeting room • Sick room/first aid room • Display area (own products) • Staff Canteen • For detail list of uses refer to Appendix I	These uses must not exceed 40% of the overall GFA.
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Land Area	1 ha	
2.2 Maximum Building Coverage	50 %	
2.3 No. Of Basements	Refer Appendix II	
2.4 Maximum Floor Space Index(FSI)	• Refer Appendix II	

3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	Refer Appendix II	
3.2 Building Form	Detached/Semi-detached/Terrace Buildings(can also be flatted) and high rise	
3.3 Floor to Floor Height	• 6.0m to 9.0m (normal type) • Rack supported warehouses (as per technical requirement)	
4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	Refer Appendix II	Boundary fronting public road need to follow the road buffer requirement.
4.2 Ancillary Buildings	2 m from the plot boundary	
4.3 Between Multiple Buildings on the Same Lot	Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	Loading docks, if any, shall be located to the rear of the building.	
5.2 Outdoor Storage Areas	Dedicated outdoor storage is allowed as per operational requirement with provision of adequate heavy vehicle parking, circulation and loading –unloading bays. Stack-yard needs to be visually screened from the public roads.	
5.3 Refuse Storage Areas	Proper location of the outdoor refuse areas shall be decided by the relevant local authorities upon review of the development application.	
5.4 Mechanical Equipment	At grade water tank and mechanical equipment: • Shall be located to the side or rear of the building grade or rooftop water tank, mechanical and telecommunications equipment: • Shall be screened subject to approval by the relevant local authorities.	
6.0 PARKING		
6.1 Location	Required parking stalls shall be provided within the lot boundary including adequate provision for two wheeler parking. Refer Appendix II	
6.2 Minimum Required Parking Stalls	• Refer Appendix II.	
6.3 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage.	



6.4 Visitor Parking accessible to specially abled	• Refer Appendix II.	
6.5 Minimum Dimensions	• Refer Appendix II.	
6.6 Circulation in Parking	• Refer Appendix II.	
7.0 FENCING		
7.1 Location	• Plantation along lot boundary. • E-security and surveillance is encouraged.	
7.2 Materials	• The use of visually permeable materials is recommended all around the development lot subject to detailed urban design and evaluation.	
8.0 CIRCULATION		
8.1 Pedestrian	• Covered pedestrian walkways shall be provided along the perimeter of the buildings fronting the main roads • Refer Appendix II.	
8.2 Public Transit	• The use of commuters' transit should be encouraged through the integration of a shuttle bus stop (shelter). • Refer Appendix II. .	
9.0 SIGNAGE		
9.1 Permitted	• One Building identification sign shall be permitted on the tower • One Commercial Sign per tenant shall be permitted: - Wall Signage (15% of the Building Face or 9 m^2 whichever less) - Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less) • Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m2 whichever less)	
9.2 Prohibited	The following signs are prohibited: • Multiple free standing signage • Off-site signage	
9.3 Location	Signs shall not obstruct views, vistas or important landmarks	
9.4 Lighting	Lighting shall be aesthetically pleasing and in keeping with the overall theme of the district.	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	



10.2	5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3	Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4	Maintenance	Refer Appendix II.	
10.5	Minimum % of green coverage	Refer Appendix II.	

LOGISTICS ZONE (I2):

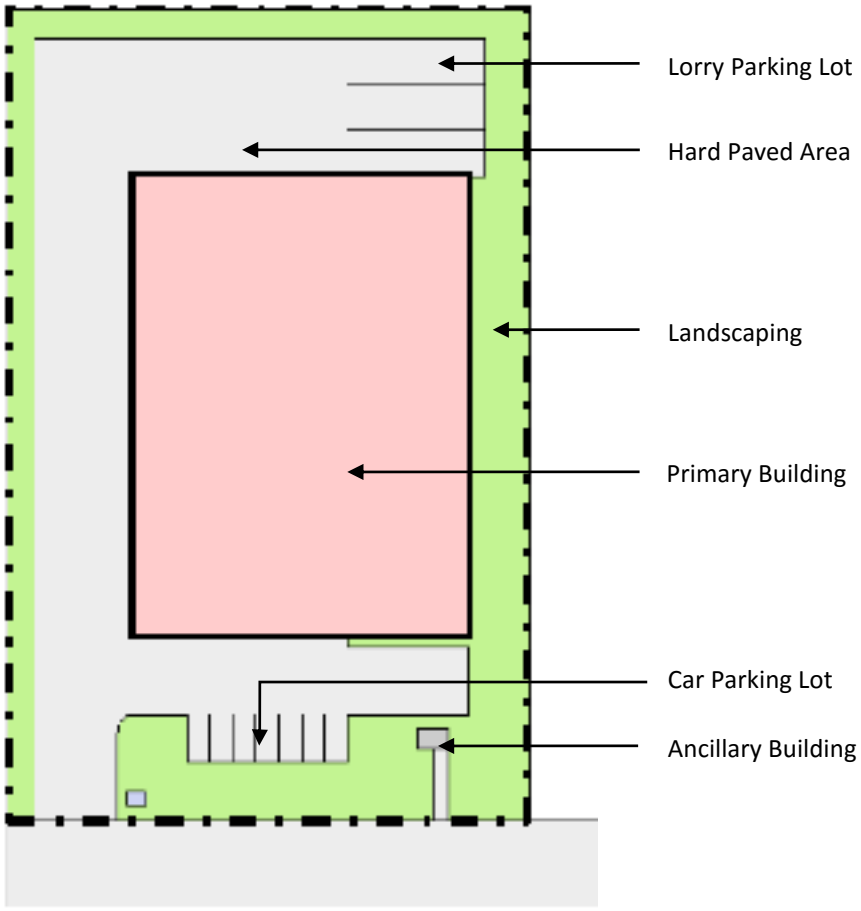
PLAN (Not to scale)

ISOMETRIC VIEW (Not to scale)

Figure: Illustration of Logistics Zone (I2)

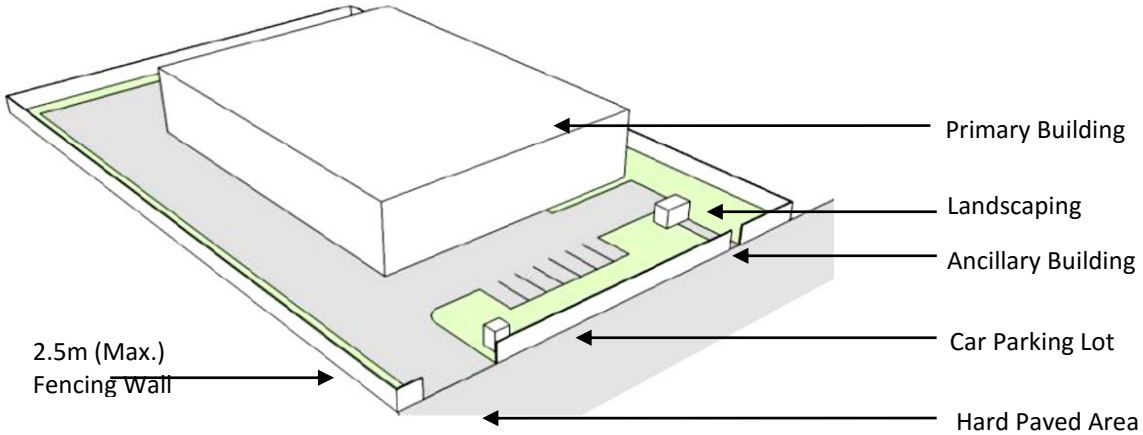
1013. Non-polluting industry Zone (I3)

	Regulation	Remarks
These regulations shall apply to: • All new, redeveloped and re-zoned industrial uses within the Non-polluting industry zone(I3)		
1.0 USES		
1.1 Permitted Uses	The target industrial clusters envisaged for the initial phase of the Capital City are as follows: • **Food & beverages (F&B)** • **Electronics & Hardware** Electronic equipment, include personal computers, telephones, MP3 players, audio equipment, televisions, calculators, GPS automotive electronics, digital cameras and players and recorders using video media such as DVDs, VCRs or camcorders. • **Printing and Packaging** • **Other Green Industries:** Downstream Textiles, Auto components, Engine Parts, Electrical Parts, some Pharmaceutical, Supporting industries (SMEs) etc. • **Logistics/ Warehouses** • For detail list of uses refer to Appendix I	Predominant use. These uses shall be at least 55% of the total GFA.
1.2 Prohibited Uses	• All type of polluting manufacturing and fabrication industries under 'Red' & 'Ultra Red' categories • Residential uses other than dormitories • Major Retail uses • For detail list of uses refer to Appendix I	
1.3 Conditional uses	• Religious facilities • Workers' accommodation/ dormitories • Group development scheme provided employees work in same industries. • Sundries / grocery shop • Food-court • Child care centre • For detail list of uses refer to Appendix I	These uses must not exceed 45% of the overall GFA.
1.4 Ancillary Uses	• Electrical substation (ESS) • Refuse area • Staff Canteen • Management / Admin Office, meeting room • Sick room/first aid room • Display area (own products) • Storage Area • Showroom • For detail list of uses refer to Appendix I	



2.0 COVERAGE		
2.1 Minimum Lot Size	0.4 Ha	
2.2 Maximum Building Coverage	50%	
2.3 No. Of basements	Refer Appendix II	
2.4 Minimum Floor Space Index(FSI)	Refer Appendix II	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	Refer Appendix II	
3.2 Building Form	Detached/Semi-detached/Terrace Buildings (can also be flatted/ high-rise).	
3.3 Floor to Floor Height	5.0 m and / or as per technical requirement.	
4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	Refer Appendix II	Boundary fronting public road need to follow the road buffer requirement.
4.2 Ancillary Buildings	Refer Appendix II	
4.3 Between Multiple Buildings on the Same Lot	Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	Loading docks, if any, shall be located to the rear of the building.	
5.2 Outdoor Storage Areas	No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	Proper location of the outdoor refuse areas shall be decided by the relevant local authorities upon review of the development application.	
5.4 Mechanical Equipment	At grade water tank and mechanical equipment: • Shall be located to the side or rear of the building At grade or rooftop water tank, mechanical and telecommunications equipment: • Shall be screened subject to approval by the relevant local authorities	
6.0 PARKING		
6.1 Location	Adequate Surface Parking with provision of Multi-storey car parking is encouraged.	
6.2 Minimum Required Parking Stalls	• Refer Appendix II.	

6.3 Surfacing	Parking shall be hard or semi perforated surfaced with adequate drainage	
6.4 Visitor Parking accessible by the specially abled	• Where required, at least 1 parking stalls per public entrance shall be designated for the disabled • The location shall be immediately adjacent to the building entrance/access	
6.5 Minimum Dimensions	Refer Chapter V	
6.6 Minimum Shaded Areas	Refer Appendix II	
6.7 Circulation in Parking	• Clearly designated and marked parking spaces, driveways and sidewalks within the parking lots shall be provided • Pedestrian circulation pathways should be provided, linking both the site access and the building. • Refer Appendix II	
6.8 Vehicular Access to Parking Lot	Multiple vehicular ingress and egress points may be permitted. Refer Appendix II	
7.0 FENCING		
7.1 Location	• Plantation along lot boundary. • E-security and surveillance is encouraged.	
7.2 Heights	Refer Appendix II	
7.3 Materials	• The use of visually permeable materials is recommended all around the development lot subject to detailed urban design and evaluation.	
8.0 CIRCULATION		
8.1 Pedestrian	• Covered pedestrian walkways shall be provided along the perimeter of the buildings fronting the main roads • Refer Appendix II . • All pedestrian circulation shall be accessible to the disabled.	
8.2 Public Transit	• The use of commuters' transit should be encouraged through the integration of a shuttle bus stop (shelter). • Adequate taxi drop off point(s) to be provided. • Refer Appendix II	



9.0 SIGNAGE		
9.1 Permitted	• One Building identification sign shall be permitted on the tower • One Commercial Sign per tenant shall be permitted: - Wall Signage (15% of the Building Face or 9 m^2 whichever less) - Window Signage (Transparent, 15% of the Building Face or 2.5m^2 whichever less) - Awning Signage (Min 2.5m clearance and 25% of the Building Face or 2.5m^2 whichever less)	
9.2 Prohibited	The following signs are prohibited: • Multiple free standing signage • Off-site signage	
9.3 Location	Signs shall not obstruct views, vistas or important landmarks	
9.4 Lighting	Lighting shall be aesthetically pleasing and in keeping with the overall theme of the district	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Minimum % of green coverage	Refer Appendix II.	

NON POLLUTING INDUSTRY ZONE (I3):

PLAN (Not to scale)

ISOMETRIC VIEW (Not to scale)

Figure: Illustration of Non Polluting Industry Zone (I3)

1014.Passive Recreational Zone (P1)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped park uses within the Passive Recreational Zone (P1) • Lots zoned or re-zoned for park uses within the Passive Recreational Zone (P1)		
1.0 USES		
1.1 Permitted Uses	• Botanical gardens, arboretums and conservatories. • Outdoor recreational facilities, such as hiking and bicycle trails, greens and commons, sitting areas and picnic areas. • Park related public facilities such as public toilet/ changing room. • Standalone food outlet with less than 50 seats/100 sqm including kitchen •	
1.2 Prohibited Uses	• All types of industrial uses • All types of residential uses • All types of commercial uses • All types of major public facilities • Major infrastructure installations • For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• Minor Public Facilities • Restaurants • Small kiosk not exceeding 100 m^2 • For detail list of uses refer to Appendix I	Development shall be allowable in only 10% of the plot area or 500 m^2 (whichever is smaller) Developments in P1 zone require approval by sanctioning authority.
1.4 Ancillary Uses	• Refer Appendix II	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II	
2.3 Visitor parking accessible to specially abled	• Refer Appendix II	

	Regulation	Remarks
2.4 Maximum Floor Space Index(FSI)	• Refer Appendix II	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• Refer Appendix II	
3.2 Building Form	Refer Appendix II	
3.3 Existing Buildings	Refer Appendix II	
4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	Refer Appendix II	
4.2 Basement Setback	Refer Appendix II	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	• At grade or rooftop water tank, mechanical and telecommunications equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities	

6.0 PARKING		
6.1 Location	• Refer Appendix II	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Visitor parking accessible to specially abled.	• Refer Appendix II	
6.5 Minimum Dimensions	• Refer Appendix II	

	Regulation	Remarks
6.6 Minimum Shaded Areas	• Refer Appendix II	
6.7 Circulation in Parking	• Refer Appendix II	
6.8 Vehicular Access to Parking Lot	• Refer Appendix II	
7.0 FENCING		
7.1 Location	• Refer Appendix II	
7.2 Heights	Refer Appendix II	
7.3 Materials	Refer Appendix II	
8.0 CIRCULATION		
8.1 Pedestrian	• Layout and design shall give due regard for safe pedestrian circulation throughout the site • All pedestrian circulation shall be accessible to the disabled. • Refer Appendix II	
8.2 Public Transit	• Refer Appendix II	
9.0 SIGNAGE		
9.1 Permitted	• All signs shall be- - Integrated into the design and theme of the park. - Wall mounted signs not to exceed 2.5m² and max height of 10m. - Freestanding signs not to exceed 1m² - Directional signs not to exceed 1m² - Temporary signs subject to approval from APCRDA.	
9.2 Prohibited	• The following signs are prohibited: • Multiple free standing signage • Off-site signage	
9.3 Location	• Refer Appendix II	
9.4 Lighting	• N/A	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as organised open space for recreation	Refer Appendix II.	

		Regulation	Remarks
10.3	Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4	Maintenance	Refer Appendix II.	
10.5	Minimum % of green coverage	Refer Appendix II.	

1015. Active Recreational Zone (P2)

	Regulation	Remarks
These regulations shall apply to: • All new and redeveloped parks within the Active Recreational Zone (P2) • Lots zoned or re-zoned for parks within the Active Recreational Zone (P2)		
1.0 USES		
1.1 Permitted Uses	• Sports Complexes • Theme Parks • Resort Hotels • Golf Courses • Recreational Clubs • Zoo • Stadiums • For detail list of uses refer to Appendix I	
1.2 Prohibited Uses	• All types of industrial uses • All types of residential uses • Most of the commercial uses • All types of major public facilities • Major infrastructure installations • For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• Single Family Residences • Resort • Complementary commercial uses • Minor Public Facilities • Supporting Infrastructure • Public Swimming Pools • For detail list of uses refer to Appendix I	Developments in P2 zone require approval by review panel
1.4 Ancillary Uses	• Parking • Toilets • For detail list of uses refer to Appendix I	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	• Refer Appendix II	
2.3 No. Of Basements	• Refer Appendix II	
2.4 Maximum Floor Space Index(FSI)	• Refer Appendix II	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	• Refer Appendix II	
3.2 Building Form	• Refer Appendix II	
3.3 Architecture	• Architecture and materials that are complementary to the natural landscape should be encouraged	

4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	• Refer Appendix II	
4.2 Basement Setback	Refer Appendix II	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II	
5.0 SERVICE AREAAND EQUIPMENT		
5.1 Loading Docks	• Refer Appendix II	
5.2 Outdoor Storage Areas	• No outdoor storage shall be allowed	
5.3 Refuse Storage Areas	• Proper location of the outdoor refuse areas shall be decided by CRDA or other relevant authorities upon review of the development application.	

5.4 Mechanical Equipment	• At grade water tank and mechanical equipment:
	  • Shall be located to the side or rear of the building
	• At grade or rooftop water tank, mechanical and telecommunications equipment :
	  • Shall be screened subject to approval by CRDA or other relevant authorities
	  • Shall not be visible from any street	

6.0 PARKING		
6.1 Location	• Required parking stalls shall be provided within the lot boundary	
6.2 Surfacing	• Parking shall be hard surfaced and provided with adequate drainage	
6.3 Minimum Required Parking Stalls	• Refer Appendix II.	
6.4 Disabled Parking	• Where required, at least 2 parking stalls per public entrance shall be designated for the disabled • The location shall be immediately adjacent to the building entrance/access	
6.5 Minimum Dimensions	• Refer Chapter V	
6.6 Minimum Shaded Areas	• A minimum of 70% of parking stalls shall be shaded	
6.7 Circulation in Parking	• Clearly designated and marked parking spaces, driveways and sidewalks within the parking lots shall be provided • Pedestrian circulation pathways should be provided, linking both the site access and the building	

6.8 Vehicular Access to Parking Lot	• Multiple vehicular ingress and egress points may Refer Appendix II	
7.0 FENCING		
7.1 Location	• Fencing walls are permitted	
7.2 Heights	Refer Appendix II	
7.3 Materials	Refer Appendix II	
8.0 CIRCULATION		
8.1 Pedestrian	• Layout and design shall give due regard for safe pedestrian circulation throughout the site • All pedestrian circulation shall be accessible to the disabled. • Refer Appendix II	
8.2 Public Transit	• Refer Appendix II	
9.0 SIGNAGE		
9.1 Permitted	• All signs shall - Be integrated into the design and theme of the building - Wall mounted signs not to exceed 2.5m² and max height of 10m. - Freestanding signs not to exceed 1m² - Directional signs not to exceed 1m² - Temporary signs subject to approval from APCRDA.	
9.2 Prohibited	• The following signs are prohibited: • Multiple free standing signage • Off-site signage	
9.3 Location	• Signs shall not obstruct views, vistas or important landmarks	
9.4 Lighting	• Lighting shall be aesthetically pleasing and in keeping with the overall theme of the district	
10.0 GREENING COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Minimum % of green coverage	Refer Appendix II.	

1016.Protected Area (P3)

	Regulation	Remarks
These regulations shall apply to: • All nature and protected area within the Protected Area (P3)		
1.0 USES		
1.1 Permitted Uses	• Forests • Wetlands • Rivers • Lake • Hills • Other Environmentally sensitive features • For detail list of uses refer to Appendix I	
1.2 Prohibited Uses	• All types of industrial uses • All types of residential uses • All types of commercial uses • All types of public facilities • For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• Infrastructure • Botanical gardens, arboretums and conservatories. • Outdoor recreational facilities, such as hiking and bicycle trails, greens and commons, sitting areas and picnic areas. • Park related public facilities such as public toilet/ changing room. • Minor Public Facilities • Restaurants • Eco Resort • Small kiosk not exceeding 100 m^2 • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• For detail list of uses refer to Appendix I	
2.0 BUILDABLE AREA (COVERAGE)		
2.1 Minimum Lot Size	• Refer Appendix II	
2.2 Maximum Building Coverage	Refer Appendix II	
2.3 Minimum Landscaping Coverage	Refer Appendix II	
2.4 Maximum Floor Area Ratio (FAR)	Refer Appendix II	
3.0 BUILDING TYPE		
3.1 Maximum Number of Floors	Refer Appendix II	
3.2 Building Form	Refer Appendix II	
3.3 Architecture	Refer Appendix II	

	Regulation	Remarks
4.0 SETBACK (Minimum)		
4.1 Building (Above Grade)	Refer Appendix II	
4.2 Basement Setback	Refer Appendix II	
4.3 Ancillary Buildings	Refer Appendix II	
4.4 Between Multiple Buildings on the Same Lot	Refer Appendix II	
5.0 SERVICE AREA AND EQUIPMENT		
5.1 Loading Docks	Refer Appendix II	
5.2 Outdoor Storage Areas	Refer Appendix II	
5.3 Refuse Storage Areas	Refer Appendix II	
5.4 Mechanical Equipment	Refer Appendix II	
6.0 PARKING		
6.1 Location	Refer Appendix II	
6.2 Surfacing	Refer Appendix II	
6.3 Minimum Required Parking Stalls	Refer Appendix II	
6.4 Disabled Parking	Refer Appendix II	
6.5 Minimum Dimensions	Refer Appendix II	
6.6 Minimum Shaded Areas	Refer Appendix II	
6.7 Circulation in Parking	Refer Appendix II	
6.8 Vehicular Access to Parking Lot	Refer Appendix II	
7.0 FENCING		
7.1 Location	Refer Appendix II	
7.2 Heights	Refer Appendix II	
7.3 Materials	Refer Appendix II	
8.0 CIRCULATION		
8.1 Pedestrian	Refer Appendix II	
8.2 Public Transit	Refer Appendix II	

9.0 SIGNAGE		
9.1 Permitted	• All signs shall - Be integrated into the design and theme of the park. - Wall mounted signs not to exceed 2.5m² and max height of 10m. - Freestanding signs not to exceed 1m² - Directional signs not to exceed 1m² • Temporary signs subject to approval from APCRDA.	
9.2 Prohibited	• The following signs are prohibited: - Multiple free standing signage - Off-site signage	
9.3 Location	• Signs shall not obstruct views, vistas or important landmarks	
9.4 Lighting	• Lighting shall be aesthetically pleasing and in keeping with the overall theme of the district	
10.0 GREEN COVERAGE		
10.1 Minimum % of green coverage	Refer Appendix II.	
10.2 5% of Plot area as organised open space for recreation	Refer Appendix II.	
10.3 Minimum width of organised open space for recreation. (m)	Refer Appendix II.	
10.4 Maintenance	Refer Appendix II.	
10.5 Minimum % of green coverage	Refer Appendix II.	

1017. Government Zone – (S1)

	Regulation	Remarks
These regulations shall apply to: • All land parcels within the Government Zone (S1)		
1.0 USES		
1.1 Permitted Uses	• Special Government buildings and Institutions, International Organizations /Office, Residences for Government Officials,Other government functions considered necessary by CRDA • For detail list of uses refer to Appendix I	
1.2 Prohibited Uses	• For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• N/A	
2.0 SIGNAGE		
	•Signage regulation of all zones apply unless specified in Urban Design Proposal. • Special signage subject to CRDA approval	

1018.Education Zone (S2)

	Regulation	Remarks
These regulations shall apply to: • All land parcels within the Education Zone (S2)		
1.0 USES		
1.1 Permitted Uses	• Educational Institutions, Public Facilities, Health centres, • Public Utilities,Educational Hostel • For detail list of uses refer to Appendix I	
1.2 Prohibited Uses	• Residential Developments, Light and Heavy Industries • For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• Local shops ,Café, restaurant up to 100 sqm including kitchen • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• Refer Appendix II	
2.0 SIGNAGE		
	• Signage regulation of all zones apply • Special signage subject to CRDA approval	

1019.Special Zone (S3)

	Regulation	Remarks
These regulations shall apply to: • All land parcels within the Special Zone (S3)		
1.0 USES		
1.1 Permitted Uses	• Residential, commercial , industrial and institutional	
1.2 Prohibited Uses	• For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• Refer Appendix II	
2.0 SIGNAGE		
	• Signage regulation of all zones apply • Special signage subject to CRDA approval	

1020.Reserve Zone (U1)

	Regulation	Remarks
These regulations shall apply to all land parcels within the Reserve Zone (U1)		
1.0 USES		
1.1 Permitted Uses	• Transport and Utility related infrastructure • For detail list of uses refer to Appendix I	
1.2 Prohibited Uses	• For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• Dormitory can be allowed only if it is bus terminal and falls under land use • For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• N/A	
2.0 SIGNAGE		
1. Permitted	• All signs shall - Be integrated into the design and theme of the park. - Wall mounted signs not to exceed 2.5m² and max height of 10m. - Freestanding signs not to exceed 1m² - Directional signs not to exceed 1m² • Temporary signs subject to approval from APCRDA.	
2. Prohibited	• The following signs are prohibited: - Multiple free standing signage - Off-site signage	

1021. Road Reserve Zone (U2)

	Regulation	Remarks
These regulations shall apply to land reserved for roads for future needs		
1.0 USES		
1.1 Permitted Uses	• For detail list of uses refer to Appendix I	
1.2 Prohibited Uses	• For detail list of uses refer to Appendix I	
1.3 Conditional Uses	• For detail list of uses refer to Appendix I	
1.4 Ancillary Uses	• For detail list of uses refer to Appendix I	
1.5 Minimum Lot Size	• N/A	
2.0 SIGNAGE		
1. Permitted	• All signage to be bilingual in English and Telugu. • CRDA to develop comprehensive road signage manual • All signage subject to CRDA approval	
2. Prohibited	N/A	
3. Location	• Signs shall not obstruct views, vistas or important landmarks	

APPENDIX IV - GENERAL REQUIREMENT FOR FACILITIES

1101. Zoning Regulations – Public Facilities

Criteria for Assessment for Education Institutes		Remarks
BUILDING SETBACKS		
Building (Above Grade)	• Front: 7.0 m (min) • Side: 4.5 m (min) • Rear: 4.5 m (min) • Basement: N/A • Ancillary Buildings: N/A	
OTHER CRITERIA		
	Refer to respective Zone Regulations	The regulations of the particular zone in which the plot is located shall be followed unless otherwise stated in the following regulations

1102. Kindergarten/ Child Care Centre

Criteria for Assessment for Education Institutes		Remarks
1.0 USES		
1.1 Permitted Uses	• Kindergarten & Nursery uses, Child Care Centers	• Should meet the standards set by Ministry of Education
1.2 Parameters for Location Assessment	• Allowed in Commercial and Residential Areas, Institutional Buildings, Civic and Community Institutes, Neighborhood Centers, Medical and Healthcare buildings, Sports and Recreational Premises, Hotels • Allowed in places identified for ancillary uses for Religious Institutes, Factories, Warehouses, Business parks, Private gated residential development. • New childcare centers and kindergartens are to be considered for approval if there are no other approved childcare centers (including any kindergarten and student care centre) within 400m radius distance from the subject premises. • Proposed development shall not be located along major arterial road or arterial road.	• Should meet the standards set by Ministry of Education • To be considered by CRDA on a case to case basis
1.3 Minimum Size	• For developments where Child Care Centre is allowed : Proposed child care center should not exceed 40% of the total Gross Floor Area of the development • For Developments where Child Care Centre is allowed within ancillary uses: Proposed child care center should not exceed 300 m^2.	
2.0 COVERAGE		
2.1 Maximum Floor Area Ratio (FAR)	• Can range from 0.8 -1.4 dependent on the surrounding density.	
3.0 FLOORS		
3.1 Maximum Number of Floors	• Can range from 2-4 dependent on the surrounding building heights.	
4.0 PARKING		
4.1 Minimum Required Parking Stalls	1 car park per 200 m^2 of GFA	

1103. Education Institutes

Criteria for Assessment for Education Institutes		Remarks
5.0 USES		
1.4 Permitted Uses	• Primary School • Secondary School • Colleges and vocational Institutes, Training Institutes, ITC • Higher Education Institutes/ Universities • Foreign and Special Schools	
1.5 Prohibited Use	• Independent Commercial Offices or shops	
1.6 Ancillary Use	• Office Commercial allowed in Higher Education Institutes/ Universities: 5% of GFA or 30,000sqm cap whichever is lower.	Such offices or Commercial related to the institute to be considered by CRDA on a case to case basis
1.7 Minimum Lot Size	• Primary School: 0.4 ha • Secondary School: 3.0 ha • Primary Secondary Combined: 3.4 ha • Special School: 1.5 Ha • Junior College: 6 Ha • Technical Education A/B: 4.0 ha • Higher Education/ University: 6.0 ha	
6.0 COVERAGE		
2.2 Maximum Floor Area Ratio (FAR)	• Can range from 0.8 -1.4 dependent on the surrounding density.	
7.0 BUILDING		
3.2 Maximum Number of Floors	• Can range from 2-4 dependent on the surrounding building heights.	Storey height above 4 can be considered subject to evaluation by CRDA.

8.0 PARKING		
4.2 Minimum Required Parking Stalls	Primary Schools: 1 Parking Lot per 3 class rooms, Plus 20 % of standard requirement, 4 Bus Parking Lots Secondary Schools: 1 Parking Lot per 2 class rooms For workshops & Laboratories: 1 Car Parking Lot per 200 m2 of GFA, Plus 20 % of standard requirement, 4 Bus Parking Lots Colleges and vocational Institutes, Training Institutes, ITC: 1 Parking Lot per 30 staff and student population, Bus Parking as required by regulations University: 1 Parking Lot per 20 staff and student population, Bus Parking as required by regulations.	Ancillary facilities such as assembly hall, canteen, sports and recreational, facilities, etc are also excluded and provisions should be provided as per regulations
4.3 Access	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by the Capital Region Development Authority	

1104. Special Education Schools

Criteria for Assessment for Special Education Schools		Remarks
1.0 USES		
1.1 Allowable Use	• Special Education School as defined by Ministry of Education.	
1.2 Ancillary Use	• Office	Such offices related to the institute to be considered by CRDA on a case to case basis
2.0 COVERAGE		
2.1 Maximum Floor Area Ratio (FAR)	• Minimum FAR: 0.5 The maximum allowable FAR is evaluated on a case-by-case basis by CRDA.	
3.0 BUILDING		
3.1 Maximum Number of Floors	The maximum allowable floors is as follows: • Ambulatory= 4 storey (maximum) • Non Ambulatory= 2 storey (maximum)	Storey height above 4 can be considered subject to evaluation by CRDA. Lifts to be provided multistoried buildings
4.0 PARKING		
4.1 Minimum Required Parking Stalls	• 1 Parking Lot per 3 class rooms. • Plus 20 % of standard requirement. • Bus Parking Lots as required by regulations. • Disabled parking as required by regulations.	Ancillary facilities such as assembly hall, canteen, sports and recreational, facilities, etc are also excluded and provisions should be provided as per regulations
4.2 Access	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by the Capital Region Development Authority	

1105. Hospitals and Health Institutes

Criteria for Assessment for Hospitals and Health Institutes		Remarks
1.0 USES		
1.1 Parameters for locating	• Should be located along an arterial road & sub arterial road • Potential location identified in the proposed land use plan.	
1.2 Permitted Uses	• Private medical suites • In-patient facilities • Outpatient facilities • Diagnostic and treatment facilities • Dispensary • Hospital support services • Translational & Clinical Research Facilities • Education facilities • Patient-facing administration facilities	• Minimum of 60% of the total GFA should be utilized for hospital use. The uses within the 60% (minimum) hospital quantum shall include in-patient/outpatient facilities, medical suites, diagnostic and treatment facilities. • Teaching Hospitals should meet the standards set by Ministry of Health and Ministry of Education
1.3 Allowable Uses	• Visitors Hostel • Commercial	• 10% of GFA or 1500m² can used for visitors hostel for family members and companions of hospital patients and is allowable only on case to case basis on evaluation by CRDA. • 5% of GFA can be used for commercial e.g. retail pharmacy, F&B outlets, shops, banks etc.
1.4 Ancillary Use	• Nurses quarters • General administration facilities • Staff facilities • Child Care Center for Staff • Mechanical and Electrical services	• Up to 40% of the GFA
1.5 Minimum Lot Size	• District Hospital, Regional Hospital, Polyclinic: 5 ha • Health Clinics: 0.015-0.02 ha	• Health Clinics are to be developed along with the Neighbourhood Centers.

2.0 COVERAGE		
2.1 Maximum Floor Area Ratio (FAR)	• Maximum FAR Subject to evaluation by CRDA	
3.0 BUILDING		
3.1 Floor to Floor Height	• 5m (maximum)	

4.0 PARKING		
4.1 Minimum Required Parking Stalls	• First 500 beds: 1 Parking Lot per 4 beds • Beyond 500 beds: 1 Parking Lot per 5 beds • 2 Parking Lots should be allocated for disabled visitor parking. 8 additional parking lots (9m x 3m) to be provided for ambulances for hospitals with Accident and Emergency (A+E) departments. For hospitals without A+E departments, 3 additional parking lots (9m x 3m) should be provided for ambulances.	• Additional spaces should be Provided for Ambulances and other office vehicles. • Ancillary facilities such as assembly hall, canteen, sports and recreational, facilities, etc are also excluded and provisions should be provided as per regulations • Additional spaces should be Provided for delivery vehicles, drop offs and taxi lay-bys as per the Ministry of Health regulations.
4.2 Access	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by the Capital Region Development Authority	

SITE PLAN

Figure A3.2: Typical Hospital layout demonstrating multiple access points and parking

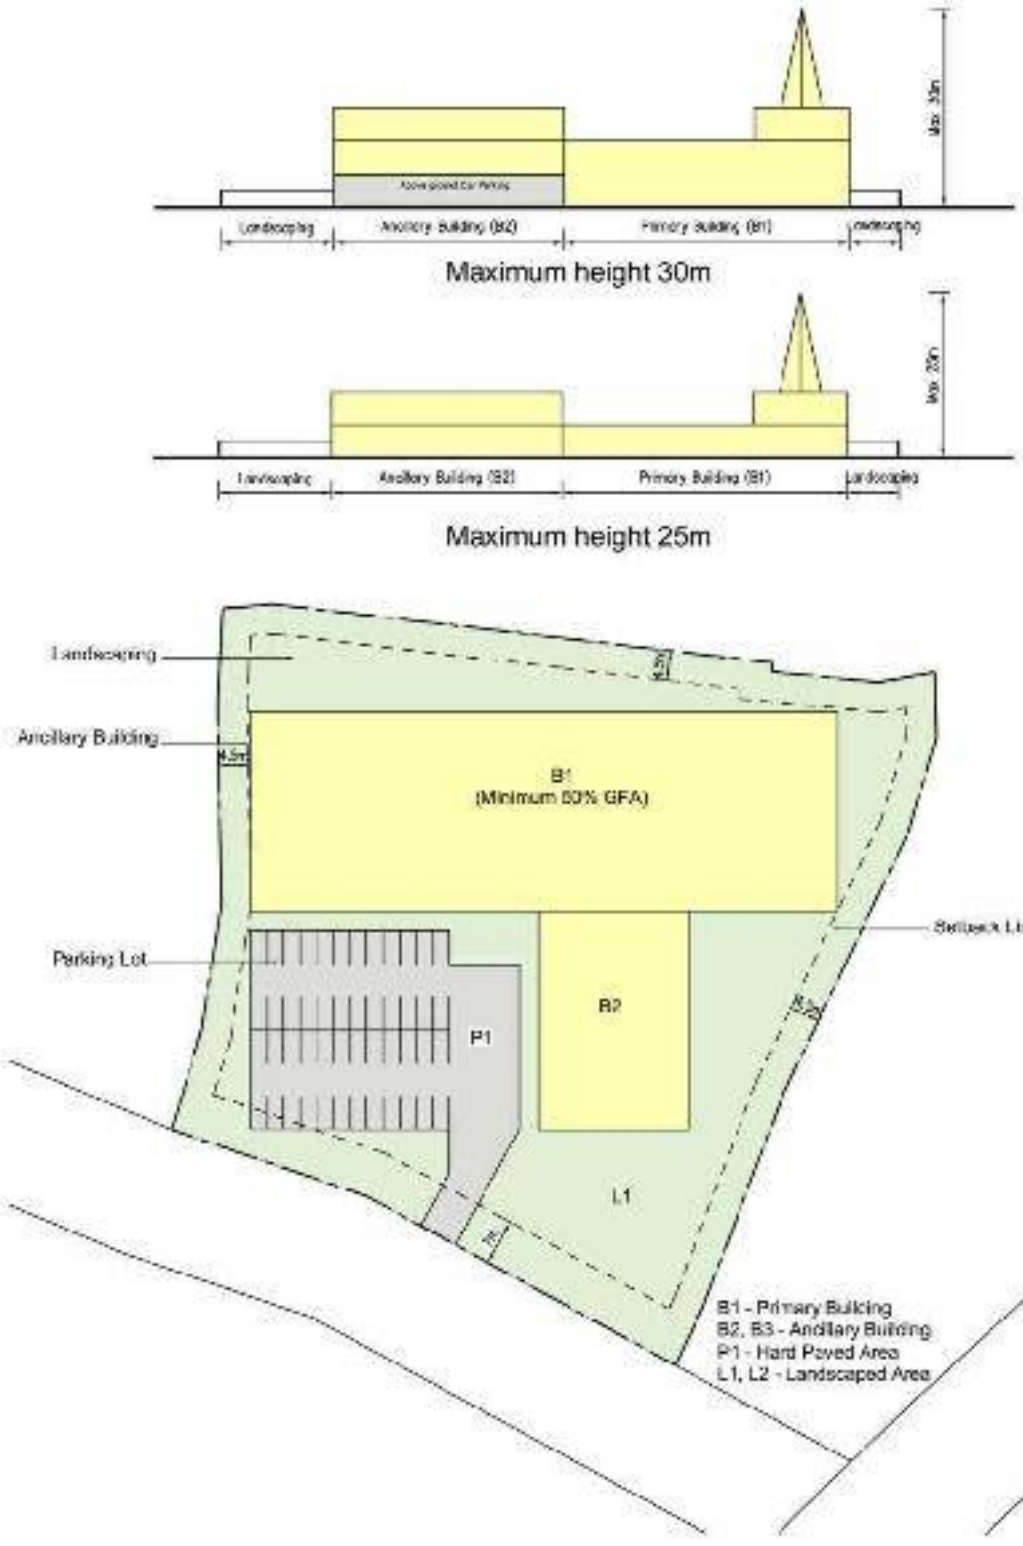
1106. Civic and Community Institutes

Criteria for Assessment of Civic and Community Institutes		Remarks
1.0 USES		
1.1 Prohibited Use	• Independent Commercial Offices or Shops	
1.2 Ancillary Use	• Office should be ancillary to the function of the institute	• Such offices or Commercial related to the institute to be considered by CRDA on a case to case basis
1.3 Minimum Lot Size	• Museums/ Cultural Centre: 1.5 ha • Health Clinic: 0.5 ha • Polyclinic: 5 ha • Community Halls: 0.5 ha • Police Station: 1.0 ha • Fire Station: 1.0 ha • Regional Library: 0.5 ha	• Police stations should be located fronting at least two main roads. • Fire stations site should have a minimum frontage of 50m. • Regulations related to Police and Fire Stations should meet the standards set by the Indian National Police
2.0 COVERAGE		
2.2 Maximum Floor Area Ratio (FAR)	• Can range from 0.8 -1.4 dependent on the surrounding density.	
3.0 BUILDING		
3.2 Maximum Number of Floors	• Can range 2-4 dependent on the surrounding building heights.	Storey height above 4 can be considered subject to evaluation by CRDA.
4.0 PARKING		
4.1 Minimum Required Parking Stalls	• Museums, Library, Community Centres, Fires Station, Police Station, Health Centres: 1 car per 200 m^2 of GFA • Theatres/ Cinema: 1 car per 12 seats Health Clinics Polyclinics: 1car parking spaces for each consulting room. 3 additional parking lots (9m x3m) for ambulances Polyclinics. 2 car parking spaces should be reserved for disabled person.	• Car park requirements for specific facilities shall follow the regulations • Ancillary facilities such as assembly hall, canteen, sports and recreational, facilities, etc are also excluded and provisions should be provided as per regulations.

Criteria for Assessment of Civic and Community Institutes		Remarks
4.2 Access	Only 1 vehicular ingress and egress point shall be allowed. Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by the Capital Region Development Authority	

1107. Evaluation for Special Institutional Buildings

Criteria for Assessment for Special Institutional Buildings		Remarks
1.0 Old Age Home:		
A home for the aged is a place where elderly people dwell in and are cared for by trainedpersonnel.		
1.1 Evaluation Criteria	• **Site Coverage:** o Minimum 35% of the site is to provided for communal open space meant for the enjoyment of the occupants but excludes car parks and other services areas like septic tank, bin center etc. • **Building Height:** o The building height is to be evaluated on the merits of each case, taking into consideration its compatibility with the surrounding developments. Homes for the aged that are 3-storey and above should be provided with lifts.	• All areas to be accessible to the disabled
2.0 Disabled Home:		
A home for the disabled is a place where the disabled dwell in and are cared for by trainedpersonnel.		
2.1 Evaluation Criteria	• **Site Coverage:** o There is no site coverage control for Home for the Disabled. • **Building Height:** o The building height is to be evaluated on the merits of each case, taking into consideration its compatibility with the surrounding developments. • **Intensity:** o The allowable GPR is evaluated on a case-by-case basis, taking into consideration surrounding land uses.	• All areas to be accessible to the disabled
3.0 Community Centers:		
Places which providing community facilities and services to the public can be integrated with the Neighborhood Centre		
3.1 Evaluation Criteria	• **Use Quantum Control:** The maximum allowable commercial use is 20%. • **Building Height:** The building height is to be evaluated on the merits of each case, taking into consideration its compatibility with the surrounding developments. • **Intensity:** The GPR for community club / centre sites is 1.4 (minimum). • Community Centres are to be integrated with Neighbourhood Centre Development	



1108. Religious Institutions (RI)

Criteria for Assessment for Religious Institutes		Remarks
1.0 USES		
1.1 Permitted Uses	• Minimum 50% of the GFA should be used for praying area	Subject to review by committee constituted by commissioner
1.2 Prohibited Use	• No Independent Commercial Offices or Shops	
1.3 Ancillary Use	• Maximum 50% of the GFA can be used for Ancillary uses such as: o Religious classrooms o Priest's room o Caretaker's room o Ancillary related uses • Maximum 10% of total GFA can be used for Ancillary uses such as: o Library o Conference room o Meeting room o Kindergarten o Childcare Center • Maximum 20-40% of total GFA can be used for Ancillary uses such as: o Columbarium	• Such offices or Commercial related to the institute to be considered by CRDA on a case to case basis • Combined area of child care or Kindergarten shall not exceed 300 m^2 • Amount of GFA allowable for the Columbarium is subject to evaluation by CRDA based on the location and surrounding density & use. • Education Centers with religious institutes should meet the minimum lot size requirement for the education facility as well as the religious facility and is subject to evaluation by the CRDA. It should also follow the regulations set by Ministry of Education.
1.4 Minimum Lot Size	• 0.5 ha	
2.0 COVERAGE		
2.1 Maximum Floor Area Ratio (FAR)	Can range from 0.8 -1.4 dependent on the surrounding density.	

3.0 BUILDING		
3.1 Maximum Number of Floors	• For Religious Institutes (RI) located within R1, R2 & R3 Zones, the development can develop up to 2 or 3 storeys For RIs located within high-density areas, storey height controls for RIs with FAR up to 1.4 will be capped at 4 storeys. For RIs with FAR of more than 1.4, storey height will be capped at 5 storeys, with an allowable height of 25m (including attic), RIs located in high-density areas that provide above-ground car park, can be allowed an additional height allowance of up to 5m (i.e. within envelop control of 30m). This can be considered to facilitate the provision of multi storey car parking within the site. • For RI in industrial areas the storey height is capped at 5 storeys with an allowable height of 25m (including attic), • The maximum height of any religious symbolic structure (e.g. cross, minaret, statue etc.) should not be more than the overall height of the Religious Institute based on the permitted number of storeys inclusive of the additional 5m allowances.	• Storey height is subject to evaluation by CRDA on a case-to-case basis, and is subject to detailed localized planning assessment; so that the proposed storey height does not create adverse impact to the surrounding development.
4.0 PARKING		
4.1 Minimum Required Parking Stalls	• Churches: 1 parking lot per 10 seats/persons • Other Religious Institutes: 1 parking lot per 50m^2 of praying area	• Car park requirements for specific facilities shall follow the regulations • The main prayer hall area is to be taken as the praying area
4.2 Access	• Only 1 vehicular ingress and egress point shall be allowed • Additional vehicular ingress and egress point shall be evaluated on case-by-case basis by Capital Region Development Authority	

SITE PLAN
Figure A3.3: Typical Religious Institution layout and section demonstrating building height

1109. Petrol/Fuel Station

Criteria for Assessment of Petrol Stations		Remarks
1.0 USES		
1.1 Permitted Uses	• Petrol / Fuel Station • Minor vehicle Repair and Servicing • Tire service facilities • Car wash • Retail Outlets	• Maximum allowable quantum for retail is 15% of the approved GFA or 150 m2 whichever is lower. • Preparation, processing and cooking of food is not allowed within the site.
1.2 Prohibited Use	• Residential • Commercial Offices • Industrial Uses • Civic Facilities	
1.3 Ancillary Use	• Office, store and compressor room associated with the functioning of the petrol station	Maximum allowable quantum for ancillary uses is 10% of the approved GFA.
1.4 Minimum Lot Size	• 400 sqm	Minimum frontage 30 m
2.0 COVERAGE		
2.1 Maximum Building Coverage	• 50% of the Site Area	
2.2 Minimum Landscaping Coverage	• 10% of Site Area	
2.2 Maximum Floor Area Ratio (FAR)	• Maximum FAR of 0.5	
3.0 BUILDING		
3.1 Maximum Number of Floors	• Single Storey	

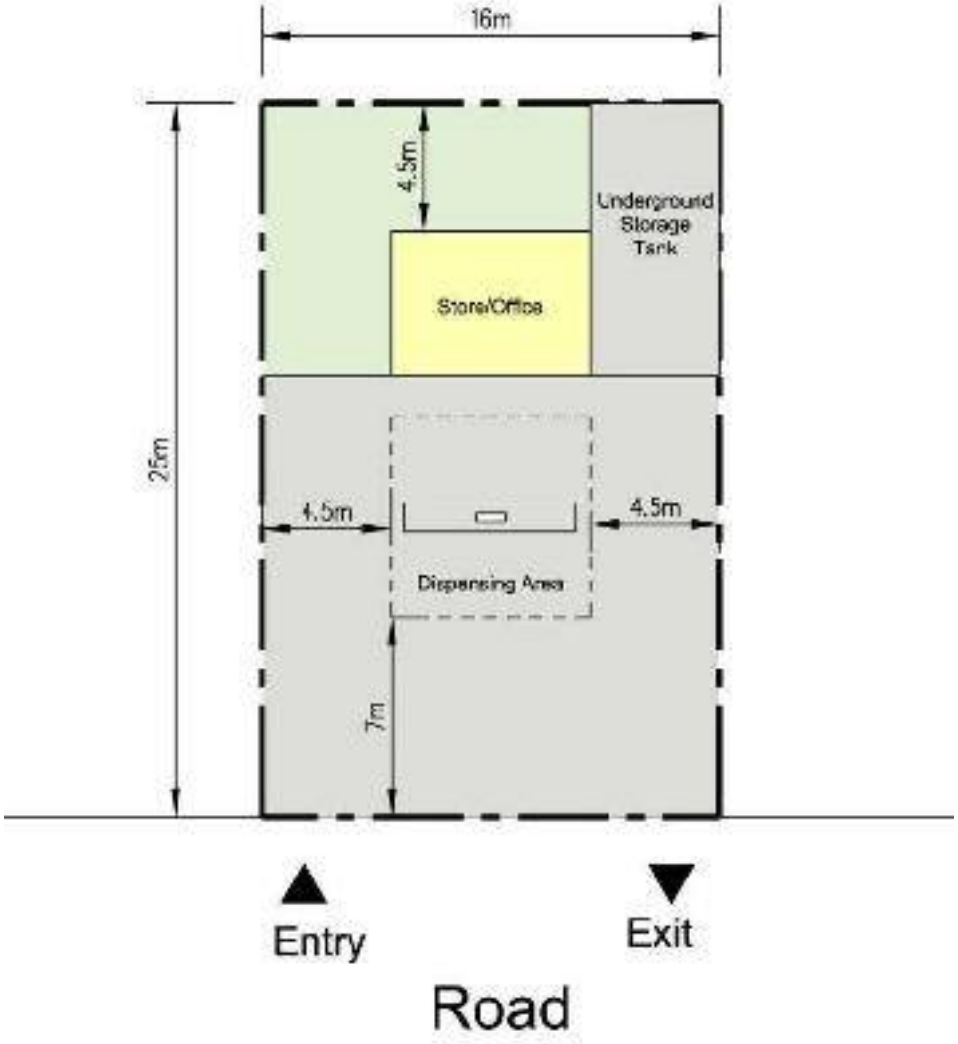


Figure A3.4: Typical Petrol Pump Layout

1110. Golf Course

Criteria for Assessment for Golf Course		Remarks
These regulations are intended to be used for Golf Course		• Approval is subject to technical requirements of Department of Infrastructure • EIA to be taken into account for Golf Courses close to water catchment areas.
1.0 USES		
1.1 Permitted Uses	• Golf Course	
1.2 Prohibited Use	• Industrial Uses • Infrastructure • Civic Facilities	
1.3 Ancillary Use	• Chalet/guest house facility/hotel room • Commercial Uses such as: o Restaurant o Bar & lounge o Refreshment area o Canteen o Kitchen o Dining area o Saloon o Golf equipment/Pro shop	• The allowable quantum for Chalet/guest house facility/hotel room should not be more than 30% of the allowable GFA or 10,000m^2 whichever is lower. • Commercial GFA for ancillary uses should not be more than 30% of the allowable GFA or 4,000m^2, whichever is lower. • Commercial uses not listed above may be considered on a case-by-case basis
2.0 COVERAGE		
2.1 Maximum Floor Area Ratio (FAR)	• Subject to Evaluation by CRDA	

CHAPTER XII

APPENDIX V

1201 METHOD OF CALCULATING BUILDING COVERAGE

Building Coverage = Building foot print of the principle building + Building foot prints of the ancillary building / Total lot area
Building Coverage = B1 +B2 +B3 / Total lot area
Where B1 is the primary building;
B2 and B3 are the ancillary buildings.

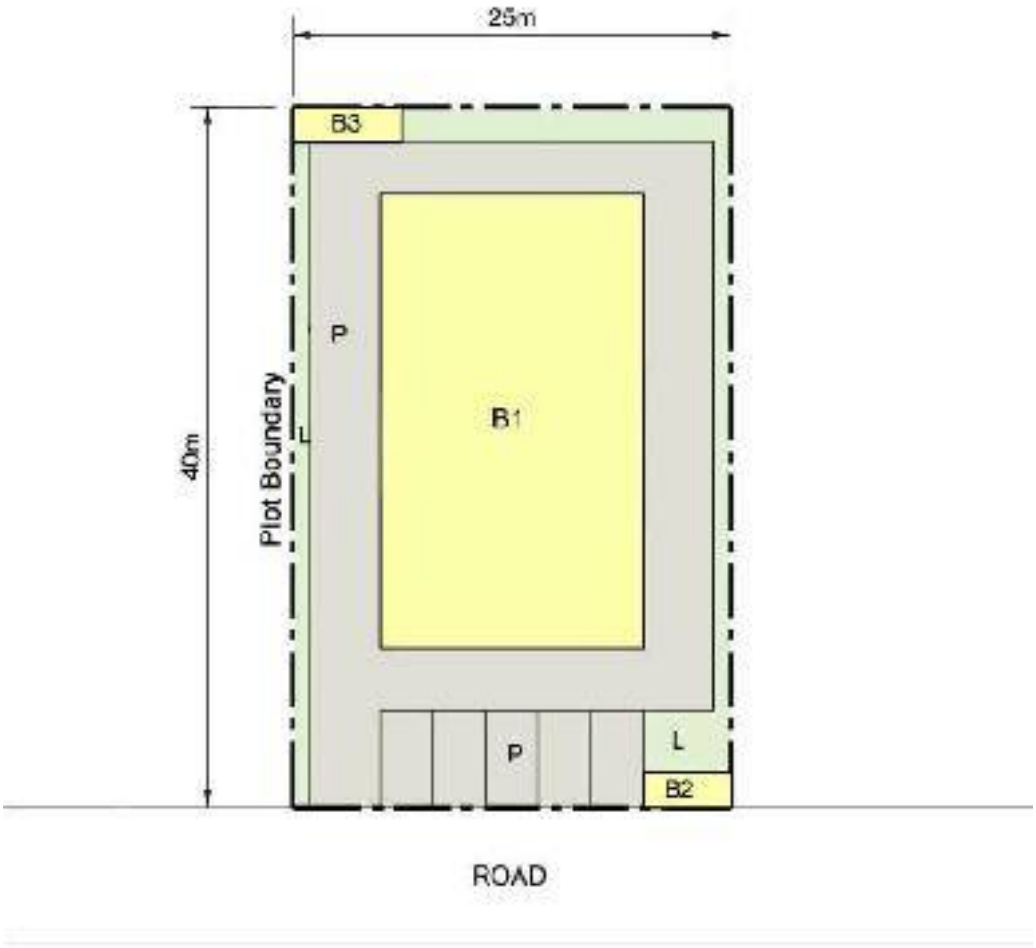

Figure 2: Building coverage

1202 METHOD OF CALCULATING LANDSCAPE COVERAGE

Foot prints of the ancillary building - Hard paved areas / Total lot area
Landscape Coverage = Total site area - B1 - B2 - B3 - P / Total lot area
Where B1 is the primary building;
B2 and B3 are the ancillary buildings;
P is the hard paved areas.

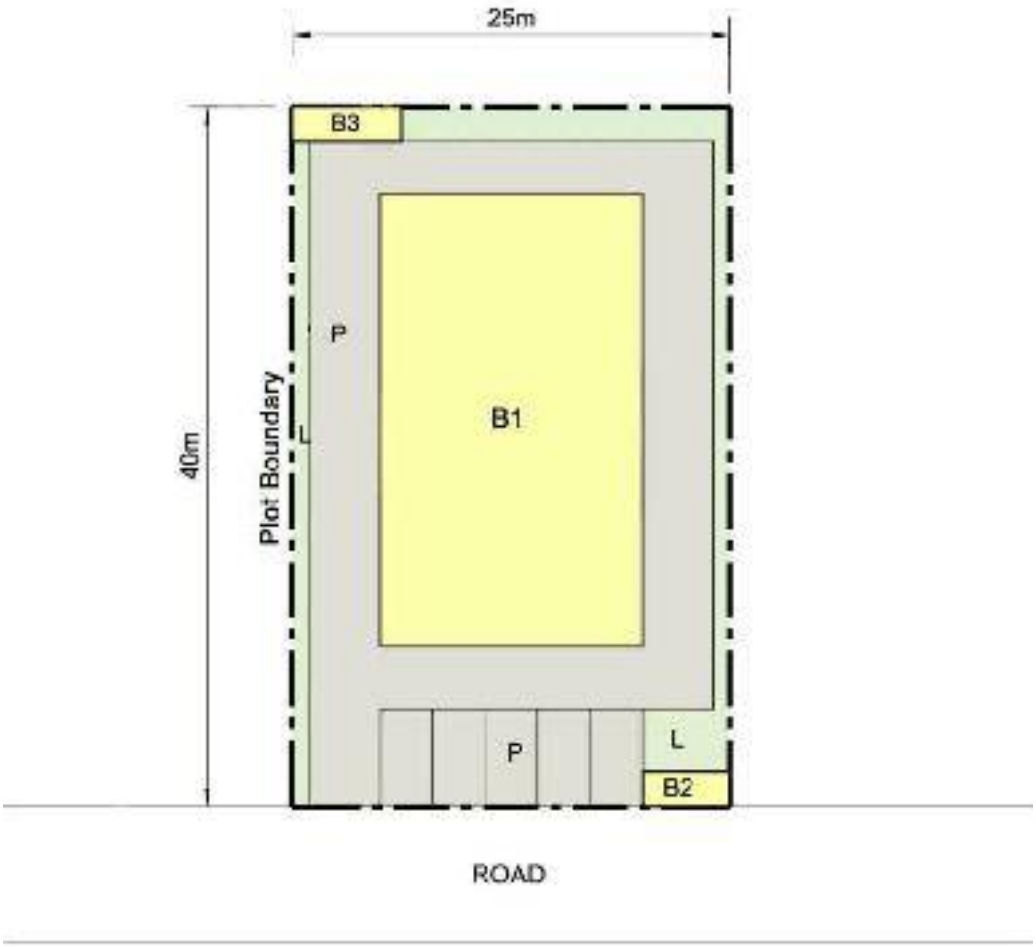

Figure 3: Landscape coverage

1203 METHOD OF CALCULATING LOT COVERAGE

Lot Coverage = Building foot print of the principle building + Building foot prints of the ancillary building + Hard paved areas + Circulation areas / Total lot area
Lot Coverage = B1 + B2 + B3 + P / Total lot area
Where B1 is the primary building;
B2 and B3 are the ancillary buildings;
P is the hard paved area.

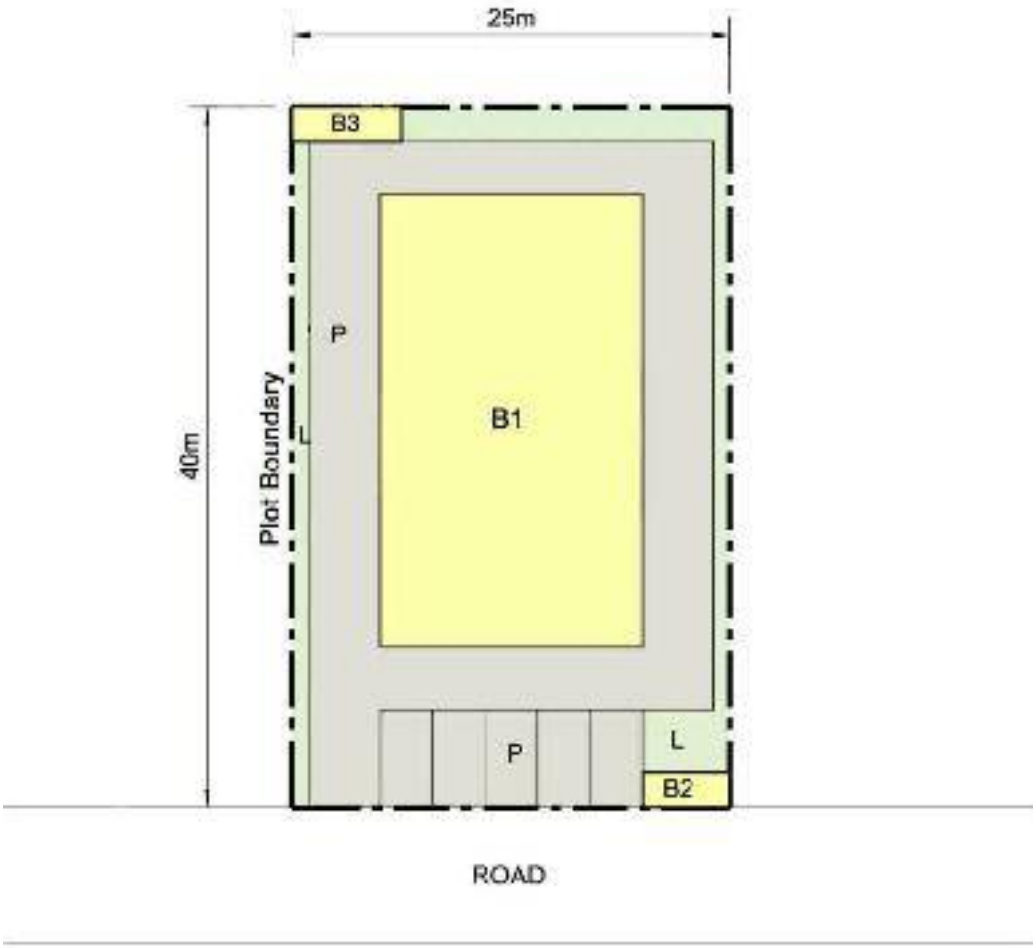

Figure 4: Lot coverage

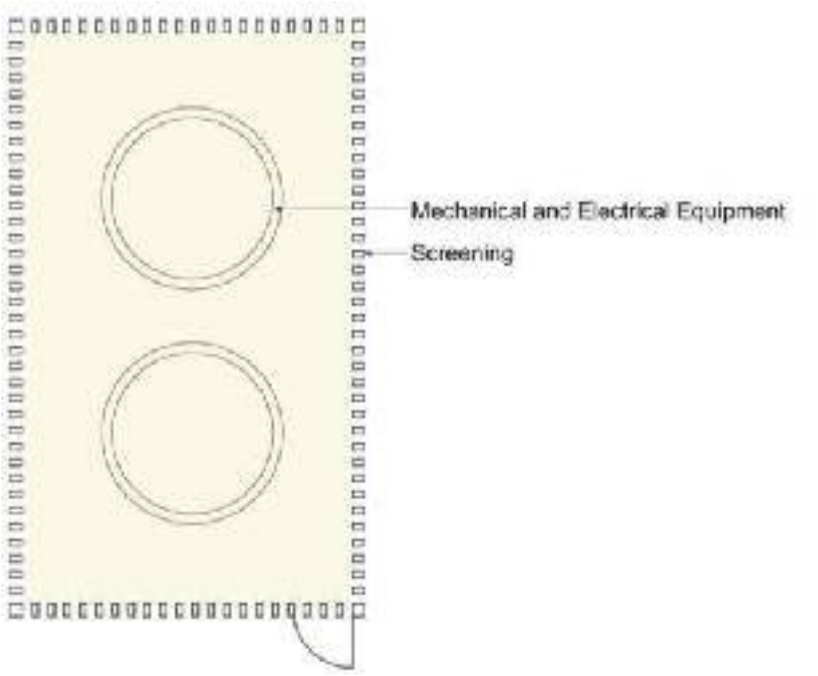

Figure 7: Screening for Mechanical and Electrical equipment plan

Figure 8: Illustration of Light Industrial (I1) - Flatted factory

1206 CAR PARKING DIMENSIONS

1206.1 General Provisions:

- Minimum width of driveway (travel isle) for two way 90 degree parking shall be at least 7 m.
- Minimum width of driveway (travel isle) for two way parallel parking shall be at least 7 m.
- Minimum width of driveway (travel isle) for 90 degree or one way parallel parking shall be at least 4.5 m.
- The maximum slope of any driveway or ramp shall not exceed 12.5% or 1 in 8.

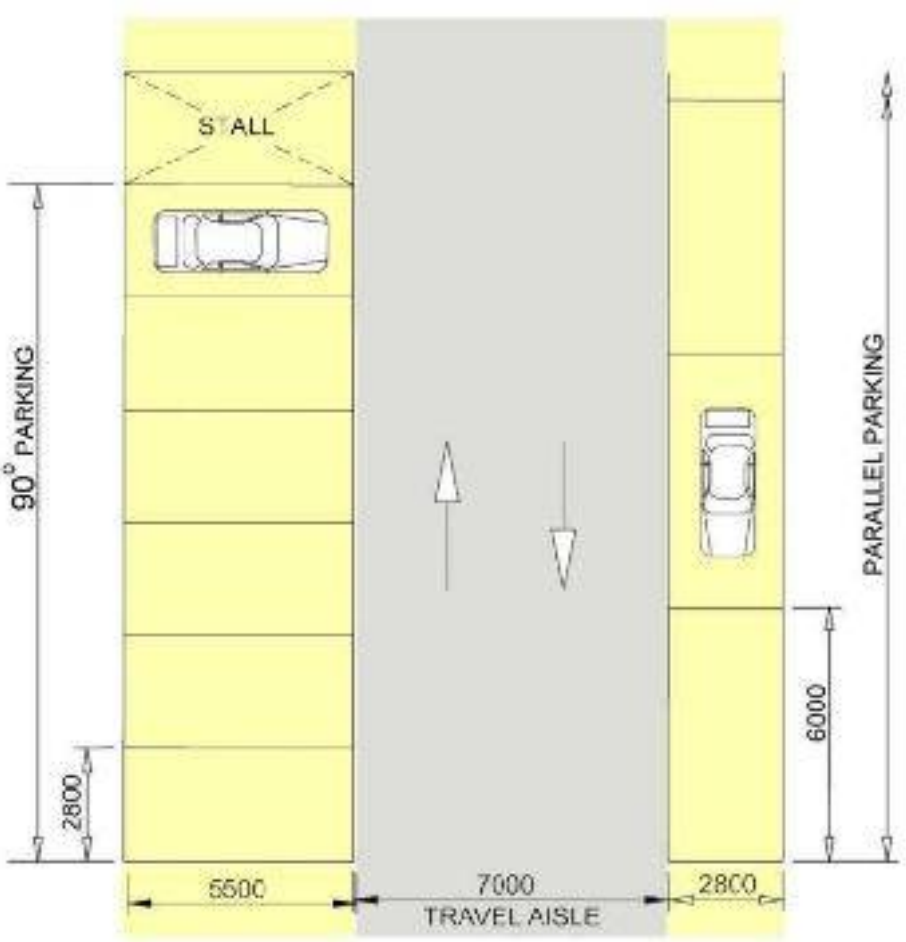

Figure 9: Car parking stall dimensions

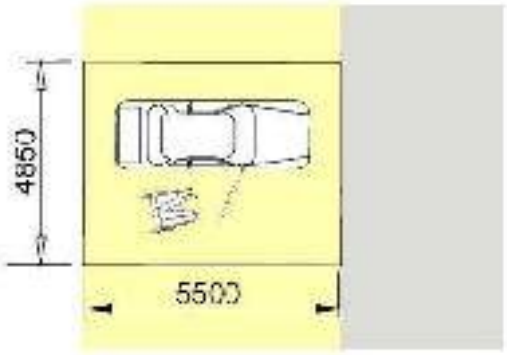

Figure 10: Car parking stall dimensions for the disabled

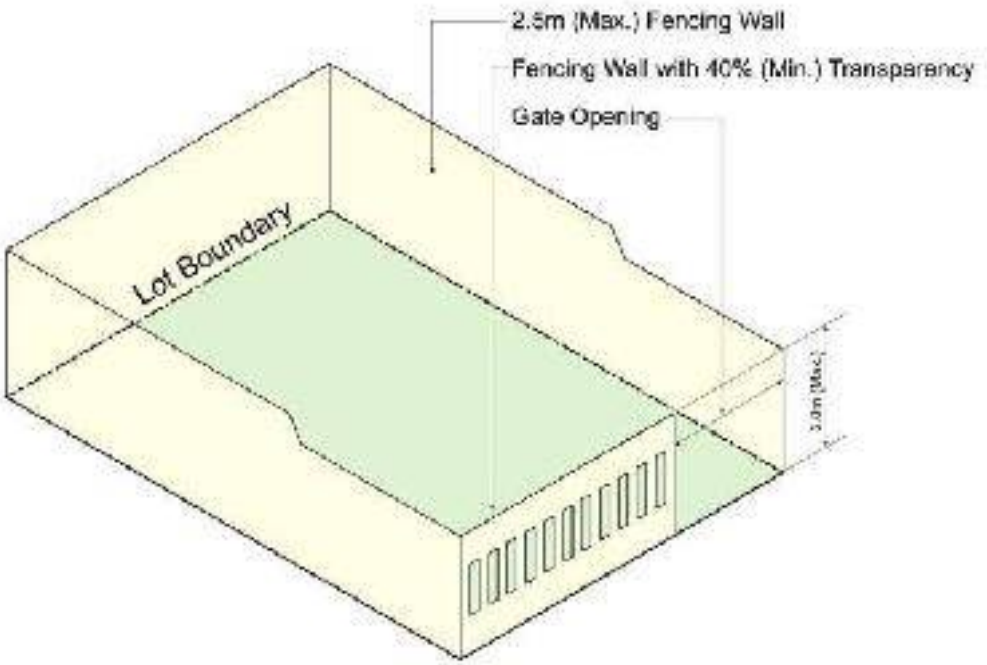
1207 FENCING



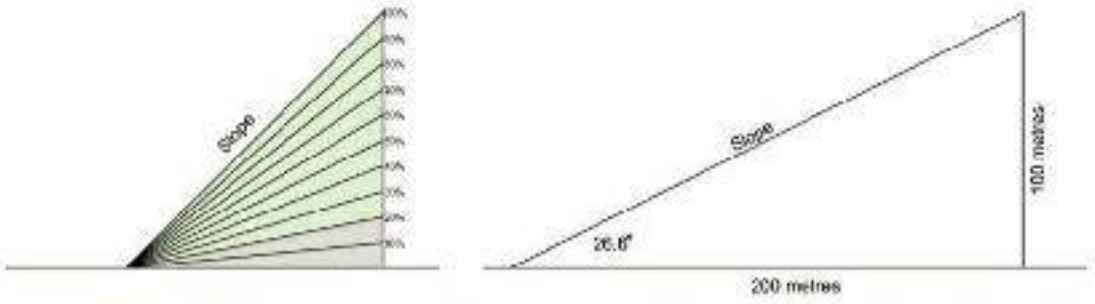


Figure 11: Fencing boundary

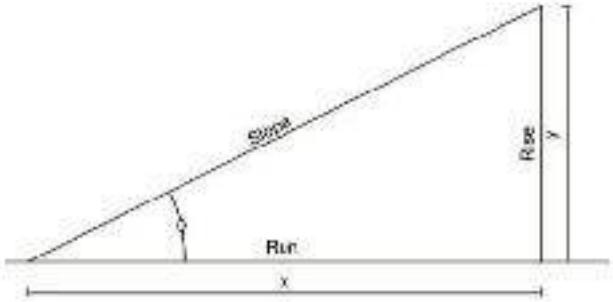

1208 SLOPES

Steep Slopes are lands along the hillsides or natural terrain that have a slope angle of 20% or greater for a minimum horizontal distance of 10 metres. All properties with a 15% or greater portion of the parent property having sloped land of 20% or greater are identified in the Slope Overlay Plan. Properties with slope less than 20% for a minimum horizontal distance of 10m are not considered a sleep slope for this guideline. Properties identified in the Overlay Plan are required to fulfill the guidelines set for the sloped areas.

The illustration in Figure A2.13 describes the measurement of slopes. Slopes can be defined in percentage, ratio or degrees. The figure explains the measurement of a slope and gives a quick means of estimating equivalencies between degrees, ratios and percentage. Note that it is possible to have a slope greater than 100% or 45^{O} (1:1).

Slope	Ratio		5:1	3:1	2:1	1.5:1	1:1	>1:1
	Percent	0	20	33	50	67	100	>100
	Degrees	0	11	18	26	34	45	>45 to 90

$$\text{Slope Ratio} = \frac{\text{Rise}}{\text{Run}} = \frac{y}{x}$$

$$\text{Slope Percentage} = \frac{y}{x} \times 100$$

$$\text{Slope Angle}(\theta) = \tan^{-1}\left(\frac{y}{x}\right)$$

CHAPTER XIII

APPENDIX VI

DETAILED MASTERPLAN OF CAPITAL CITY - AMARAVATI

Legend

- Existing Railway Stations
- Capital City Planning Boundary
- Village Administrative Boundaries
- Survey Parcels

Sir,

Sub: APCRDA – LPS Infra - ESMU - Reply to the Compliance to Environment Clearance and Hon'ble NGT directions – Conditions to be compiled at city and neighbourhood level – compliance report submitted – Reg

Ref:

1. Proc.No. MAU61-EE0ENV(APCP)/3/2025-CZLE received on Dt. 09.05.2025
2. Note-9 of File no. MAU61-USI0INFR(OTH)/19/2025-IFR1, computer no. 2828121.

** ** **

It is submitted that, in pursuance of the proceedings cited Ref-1, the replies to EC conditions are approved by the Commissioner, APCRDA on 07/06/2025 vide Ref-2 and the same are here with submitted for taking further action.

S.No.	EC Conditions	Replies by LPS Infra
1	Water pumping system and sewage conveyance and treatment systems are energy intensive and as such the proponent shall follow bureau of energy efficiency norms.(Measures taken and included in the BOQ may please be provided in floodworks, STPs, Pumping stations, WTP, WS mains –pumps –also submit the supporting document evidence. The items if not covered shall be included in the Part-B fund and an order in this regard from the Head of the Institution may be provided.)	With regards to the above EC condition, the INFRA wing looking after the STP projects only. The information with respect to the above point is herewith provided. Provision of Variable Frequency Drives, SCADA and Required Power Factor has been included in BOQ of STP facilities as per BEE Guidelines. ***Necessary conditions provided in the bid document are attached in Annexure-1.***
2	The Proponent shall provide continuous online water quality monitoring facilities for WTPs, STPs & up stream drinking water source at Krishna River results of monitoring shall be linked to SPCB/CPCB website. (Measures taken and included in the BOQ may please be provided for the relevant works also submit the supporting	With regards to the above EC Condition, the INFRA wing looking after the STP projects only. The information with respect to the above point is herewith provided. Provision of Continuous Online Water Quality monitoring system has been included

S.No.	EC Conditions	Replies by LPS Infra
	document evidence. The items if not covered shall be included in the Part-B fund and an order in this regard from the Head of the Institution may be provided.)	in BOQ of STP facilities. After commissioning the STP facilities, the results will be linked to SPCB/ CPCB websites. ***The BoQ of STP Package is attached in Annexure-2.***
3	The Proponent shall encourage battery operated vehicles by providing separate lane with a provision for recharging. (Decision taken regarding separate lane recharge infrastructure, items included in the BoQ may be provided for the relevant works- also please submit supporting documents evidence.)	With respect to the above EC Condition, it is to inform that separate lane for battery operated vehicles was not included in the DPRs as the roads taken up by the infra wing is only in LPS layouts and In LPS, there is no provision for recharging of battery vehicles.
5	Develop atleast 5 safe street crossings per Km for bicycles with spacing between two crossing not more than 250 mts. (Details as per plan and BOQ may please be provided with supporting document evidence. The items if not covered shall be included in the Part-B fund and an order in this regard from the Head of the Institution may be provided.)	With regards to the above EC condition, it is to inform that a Lumpsum provision was made in all the estimates towards street furniture. The same will be provided at appropriate time as per site requirement and as per standards. ***A copy of abstract of estimate is attached in Annexure-3.***
6	Proponent shall construct a continuous and obstructed footpath on each side of all streets with RoW wider than 12m .Min. width of footpath shall be 2 m. In addition to space for trees/ Greenary / vending spaces and surface utilities. Width of footpath shall be determine based on pedestrian volume and have to be wider than 2m whenever required. **Intermittent buffers/ bollards and other physical elements should be used to protect foot paths from encroachments by motor vehicle parking. Footpath elevation over the carriage Way at all times should be less than 150 mm. All pedestrian facilities should be barrier free for universal access by all persons with reduced mobility including those hearing and visual impairments for the text in Bold.**- Details as per the plan and BOQ may please be provided with supporting document evidence. The items if not covered shall be included in the Part-B fund and an order in this regard from the Head of the Institution may be provided.	In pursuance of the EC Condition, it is to submit that the width of the footpath was provided at 1.8m on either side of right of way for effective functioning of pedestrian system as per clause 6.1.5.1. of IRC-103-2012 code. ***The extract of IRC- 103-2012 Code is attached in Annexure-4.*** With regards to the road furniture highlighted in the above para, it is to inform that a Lumpsum provision was made in all the estimates towards street furniture. The same will be provided at appropriate time as per site requirement and as per standards. At present, designs & drawings upto utilities are under finalization. The drawings for footpaths i.e. Height of kerb wall will be finalized at a later date. Soon after finalization the drawing will be submitted.

S.No.	EC Conditions	Replies by LPS Infra
7	The proponent shall ensure usage of fly ash for levelling / reclamation of low lying areas, road embankments, for raising platforms in inundated areas, and usage of fly ash based products for construction purpose including fly ash bricks, PPC cement, Concrete etc., in compliance with Fly Ash Notification issued by the MOEF under Environment (Protection) Act.(Details as per BOQ may please be provided with supporting document evidence, item if not covered shall be included in the part B fund and an order in this regard from the Head of the institution may be provided)	In LPS Infra works, it is not proposed for usage of fly ash for structural work. Flyash would be used in the bricks wherever necessary.

Enclosure: Annexure-1,2,3,4

Yours faithfully,

9/6/25

Chief Engineer (LPS Infra)
APCRDA, Vijayawada

09/06/25
FE

Copy Submitted to:

1. The Commissioner APCRDA in favour of information.
2. The Group Director (EnC), USI, APCRDA in favour of information.

Annexure - 1

GOVERNMENT OF ANDHRA PRADESH,

Andhra Pradesh Capital Region Development Authority (APCRDA)

NIT NO: 64/PROC/MAU61-USI0INFR(OTH)/46/2024-IFR1/STP

Name of the Work: **WORLD BANK & ADB financed Amaravati Capital City Development Program related Construction of Sewage Treatment Plants (STPs) in the Zone-1, Zone-2, Zone-3, Zone-5 & Zone-6 including Engineering, Construction, Supply & Installation of Electro-Mechanical Equipment, Testing and Commissioning in Amaravati Capital City, Andhra Pradesh on Lumpsum Contract (% Percentage Tender) & Performance based O&M for a period of 7 Years including DLP of 2 Years.**

Section VI - Works' Requirements

Scope of Works

Name of the Work: WORLD BANK & ADB financed Amaravati Capital City Development Program related Construction of Sewage Treatment Plants (STPs) in the Zone-1, Zone-2, Zone-3, Zone-5 & Zone-6 including Engineering, Construction, Supply & Installation of Electro-Mechanical Equipment, Testing and Commissioning in Amaravati Capital City, Andhra Pradesh on Lumpsum Contract (% Percentage Tender) & Performance based O&M for a period of 7 Years including DLP of 2 Years)

Brief Description of the work:

1) Acronyms:

S. No.	Abbreviation	Full Form
a)	RoW	Right of Way
b)	PCC	Plain Cement Concrete
c)	RCC	Reinforced Cement Concrete
d)	IRC	Indian Road Congress
e)	FRL	Finished Road Level
f)	GFC	Good For Construction
g)	GIS	Geographic Information System
h)	HDPE	High-Density Polyethylene
i)	DWC-PE–SN	Double Wall Corrugated Polyethylene - Stiffness Nominal
j)	IPS	Intermediate Pumping Station
k)	CPHEEO	Central Public Health and Environmental Engineering Organisation
l)	DI	Ductile Iron
m)	ICT	Information and Communications Technology
n)	MORTH	Ministry of Road Transport and Highways
o)	BIS	Bureau of Indian Standards
p)	ISO	International Organization for Standardization
q)	NAC	National Academy of Construction

2) Introduction:

In keeping with the aspiration of the Government of Andhra Pradesh to build the "Peoples' Capital", the land procurement mechanism has been designed to be voluntary and is based on consensual process of land pooling. Land pooling mechanism is mainly adopted for development of the Amaravati Capital City area, wherein, the land parcels owned by individuals or group of Employers are legally consolidated by transfer of ownership rights to the authority, which later transfers the ownership of a part of the land back to the land

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)
Generated from eOffice by KOMMINENI PURANDHARA CHAKRAVARTHY, WAS(KPC), WARD AMENITIES SECRETARY, MAU61-ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY or

Employers and balance land proposed to be used for undertaking of development of such areas.

The broad objective of the scheme is to provide fair compensation to the land Employers for residential purposes or commercial activities in exchange of pooling of their agriculture lands. This is in sync with the overall vision of Amravati to be a "People's Capital" and involving people in the development process. Accordingly, the Government have issued the "Andhra Pradesh Land Pooling Scheme".

In pursuance of developing the capital city region, APCRDA has decided to prepare a Smart Integrated Infrastructure works encompassing the Capital City of an area of 217 sq. km which also includes the development of Tier-II infrastructure for 17,000 acres of returnable lands under Land Pooling Scheme.

The Development of Construction of Sewage Treatment Plants (STPs) in the Zone-1, Zone-2, Zone-3, Zone-5 & Zone-6 including Engineering, Construction, Supply & Installation of Electro-Mechanical Equipment, Testing and Commissioning in Amaravati Capital City, Andhra Pradesh on Lumpsum Contract (% Percentage Tender) & Performance based O&M for a period of 7 Years including DLP of 2 Years on Lump sum contract (Percentage Tender).

The Summary of scope of the Project Works are enumerated below:

S.No.	Description	Scope
1	Zone-1B (for 1A & 1B) Sewerage Treatment Plant (STP)	14 MLD
2	Zone-2B (for 2A & 2B) Sewerage Treatment Plant (STP)	12 MLD
3	Zone-3B (for 3A & 3B) Sewerage Treatment Plant (STP)	18 MLD
4	Zone-5D (for 5A,5B,5C & 5D Sewerage Treatment Plant (STP)	33 MLD
5	Zone-6 Sewerage Treatment Plant (STP)	13 MLD
	Total	**90 MLD**

The following are the key components to be developed FOR THE PROJECT WORK but are not limited to below:

1) In Amaravati capital city the supply of potable water proposed at 150 LPCD. The sewerage network is designed for the peak factor considering 2.25 based on the size of the population. The Contractor has to design the STPs considering the sewerage generation at 80% of potable water supply as per CPHEEO norms. The STP is proposed to be taken up in modular basis for process of Sewage subject to availability of any quantity lesser than designed Quantity. The standards for the treated sewerage are been bench marked to higher standards both in BOD, N & P nutrients.

2) The tertiary treatment due to mandated reuse of treated sewage for Landscaping,

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)
Generated from eOffice by KOMMINENI PURANDHARA CHAKRAVARTHY, WAS(KPC), WARD AMENITIES SECRETARY, MAU61-ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY or

horticulture& Agriculture purposes, golf courses, vehicular exterior washing, fire protection, Toilet flushings etc.,

3) The Contractor shall ensure the treatment in accordance with NGT existing norms and as per amended norms in table 7.19 of the manual on Sewage Treatment Systems, 2013 vide D.O Q-12011/9/2023-CPHEEO dt 18.12.2023, Total Nitrogen -10 mg/l and Total Phosphorus 1.0 mg/l, while discharge the treated sewage in to the Water bodies.

4) The STPs are to be designed and equipped with latest state of art technologies either A2O/SBR with IFAS process. Further, the unit shall have systems for disinfection using Chlorination. Effluent monitoring systems shall be installed with data transfer facility.

5) The STPs are to be operated 24X7 with PLC/ SCADA.

6) The Contractor shall carry out the O&M for STPs for a period of 7 years from the date of Completion & Commissioning including Defect liability period for 24 Months strictly in compliance with NGT norms and subsequent amendments and also as per CPHEEO guidelines.

7) The Contractor shall make necessary arrangement for safe disposal of excess treated unutilized sewage into nearest natural water bodies.

8) The Contractor shall carry out detailed soil investigation and geo tech survey vetted from reputed Engineering Colleges/Accredited NABL Laboratory, for the STP Project Work where in , reconfirmation of stability need to be satisfied. The contractor shall evolve economical and cost effective design for such jobs for which the indicative drawings will be furnished. The contractor shall follow relevant CPHEEO/BIS/ISO/ NEC (National Electric Code)/IE rules/CEI (Chief Electrical Inspectorate) to GoAP/EEC/MID-EC/IEC/NBC/NIDM Guide lines/ ECBC norms including all the state of the art Green features applicable for this project and in conformity with best National & International practices. They have to carry out designing and analysis in the latest versions of design software. Analysis using 3D modelling & NAVIS/Revit(BIM)/ other equivalent platform shall be done by the contractor considering the sequence of the utility crossings like storm water, water supply, sewer, power & ICT ducts etc.

9) The Contractor shall get the designs and drawings proof checked by Indian Institute of Technology Chennai/Hyderabad/Mumbai/Delhi Or another accredited consultant, agreed by the Employer (the “Proof Consultant”, the payment to proof consultant shall be done by contractor). The Proof Consultant shall proof check the detailed calculations, drawings and designs, which have been submitted by the contractor. The Contractor shall agree to incorporate any value engineering suggestions made by the PMC/PgMC/Department/Proof Consultant. The contractor thereupon shall prepare good for construction drawings for approval of PMC/Department and works shall be carried out accordingly.

10) The Contractor shall supply the Electrical & Mechanical Equipments from the reputed Manufacturers with a Warranty period of minimum Two (02) Years and further extendable period of another Period of Two (02) Years, if required, at the cost of the Contractor.

11) All the Electrical Equipment & Motors installed at Construction site shall be Energy Efficient conforming to IS Code: 12615:2018.

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)
Generated from eOffice by KOMMINENI PURANDHARA CHAKRAVARTHY, WAS(KPC), WARD AMENITIES SECRETARY, MAU61-ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY or

12) VFD system should be ensured for Submersible Pumps and the Pumpsets conforming to IS Code: 8034:2002

13) All RCC members of the STP Plant shall be constructed with Sulphate Resistant Cement (SRC) conforming IS Code: 12330:1988

14) All RCC members of the STP Plant shall be constructed with Corrosion Resistance Steel (CRS) Conforming IS Code: 1786: 2008

15) The Levels shown in the flow diagram are indicative. The Contractor shall ensure the Levels while undertaking Design Drawings duly coordination with other stakeholders. To de detailed

16) All Design Parameters of the STPs shall conform the CPHEEO/NGT and other relevant Code of Practices.

17) The Technology for STPs shall be adopted as per A2O/Sequence Batch Reactor (SBR).

BROAD SCOPE OF WORK

1.1 General

Design , Supply, Construction, erection, testing and commissioning of (5 STPs) STPs of 90 MLD capacity (Decentralized) in part of as a part of APCRDA including cost of all associated civil, mechanical, electrical and instrumentation items of work etc., complete including miscellaneous works associated with plant, with Defects Liability warranty period of two years for equipment & instrumentation items from the date of commissioning of the plant on turnkey basis including Manning, operation and maintenance of the plant and assets created for a period of 7 years.

a) Construction of civil engineering works for all the units and all the ancillary structures as detailed in BoQ
b) Supply, erection, testing & commissioning of all the mechanical equipment as detailed in BoQ .
c) Supply, erection, testing & commissioning of all the electrical & instrumentation and PLC /SCADA Automation equipment as detailed in BoQ.
d) Supply, erection, testing & commissioning of all the piping, valves and specials etc. as detailed in BoQ.
e) O&M for 7 years including of 2 yrs DLP.

Hydraulic testing of all the water retaining structures.

Operation & Maintenance of Sewage Treatment Plant during trial run/ start-up/ stabilization for a period of six (6) months or complete stabilization of the plant indicating satisfactory performance of the plant for continuous period of **two** weeks.

Manning, Operation & Maintenance of the plant along with electrical and mechanical equipment for a period of Seven (7) years after stabilization of the plant process.

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)
Generated from eOffice by KOMMINENI PURANDHARA CHAKRAVARTHY, WAS(KPC), WARD AMENITIES SECRETARY, MAU61-ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY or

During the stabilization period & trial run period electricity charges will be borne by the department.

During the Operation and Maintenance Period after successful stabilization and Trial run period, electricity charges will be borne by the department.

Defect liability for a period of twenty-four (24) months after the completion and commissioning of works i.e. after stabilization period .

Supply of equipment drawings, Technical specification/ Catalogue.

Supply of as built drawings after completion.

Supply of Operation & Maintenance manual including manufacturer manual of the equipment supplied.

1.2 Site Information

The Sewage Treatment Plants (STP), based on Sequential Batch Reactor Process Technology (SBR)/ A2O with IAFS Process/ MBBR Process is proposed to be constructed at various locations (Decentralized) as per below given capacities.

S.No.	Zone	STP Capacity in MLD (Phase - I)
1	Zone 1	14
2	Zone 2	12
3	Zone 3	18
4	Zone 5	33
5	Zone 6	13
	Total	**90**

1.3 Location

The APCRDA, Amaravati - Vijayawada city is situated centrally (Geographically) in the country in Andhra Pradesh State.

1.4 Plant Capacity

Five (5) Nos of STPs of total Capacity 90 MLD capacity sewage treatment plants based on Sequential Batch Reactor Process Technology/ A2O with IFAS Process/ MBBR Process, followed by post chlorination system shall be constructed at various locations with 30% capacities for Tertiary Treatment.

1.5 Treated Sewage Quality

The treated sewage quality of final effluent for which sewage treatment plant is designed and to be guaranteed by the contractor during operation and maintenance period as per NGT norms and APPCB/CPCB norms and discharged to the nearby Rivers/Streams by pipeline conveyance:

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)
Generated from eOffice by KOMMINENI PURANDHARA CHAKRAVARTHY, WAS(KPC), WARD AMENITIES SECRETARY, MAU61-ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY or

Sl. No	Parameters	After Secondary Treatment	After Tertiary Treatment
1	Ph	5.5 to 9.0	5.5 to 9.0
2	BOD (mg/l)	< 10	< 5
3	COD (mg/l)	<50	< 50
4	TSS (mg/l)	< 10	< 5
5	Fecal Coliform (MPN/100 ml)	NIL	NIL
6	NH4-N (ppm)	< 5	< 5
7	TP(ppm)	< 1	< 1
8	Total Nitrogen (ppm)	<10	<10

Note 1: STPs shall be designed for 100% capacity upto Secondary treatment and 30% of the Capacity shall be pass through Tertiary Treatment to meet the above standards.

SCOPE OF WORK FOR CIVIL WORKS

All the units of STPs at respective locations shall be developed as per approved designs and drawings in accordance with CPHEEO norms / Sewer Manual / IS Codes and its latest amendments

1.6 Various Components of Wet Well / Pumping Station:

The components of the Wet Well / Raw Sewage Pumping Station for the Agency/ Contractor / bidder are as under:

i. Receiving Chamber / Inlet chamber
ii. Coarse Screen channels (1 Mechanical + 1 Manual) of required size with Gates, Mechanical bar screens & conveyor belt etc.
iii. Wet Well / Raw Sewage Pumping Station with Pump header arrangement
iv. Delivery piping & rising main of required size
v. Main Electrical Panel Room of required size with required Instrumentation for auto operation.
vi. Wet well shall be designed for 10 minutes retention time for peak flow with free board of minimum 50 cm to receive the raw sewage below the invert level of raw sewage inlet main.

1.7 Various Components of Sewage Treatment Plant (STP)

i. Fine Screen channel of mechanical & manual, with Gates, Mechanical bar screens & Manual Fine screen with Conveyor belt etc.
ii. Vortex Grit Tank with Gates/Detroiter Tank with Screw classifier, flow distribution system, overflow weir, scraping mechanism, organic return pump and grit washing arrangement.
iii. Raw sewage channel with partial flow.
iv. Sequential Batch Reactor process sludge basins with decanters and Pumps for return sludge and excess sludge withdrawal

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)

14.00	Providing, construction, erection, hydraulic testing, commissioning, stabilisation, and giving satisfactory trials of sewage treatment plant consisting of stilling chamber, Screen Chamber, vortex grit removal tanks, Parshall Flume Channel, distribution chamber and biological process either SBR (Sequential Batch Process) basins with decanters (or) A2O with IFAS with Secondary Clarifier, Fine Bubble Diffusers, Air blowers, Sludge sumps, Sludge Pump House, Centrifuge Building, Chlorine contact tank, chlorinator / Tonner Room, sludge centrifuge / Belt press/ Screw Press, necessary piping work with required valves, gates, MCC cum PLC Panel Room, Air blower room, equipments, tools and plants, spare parts, etc., complete as turnkey job with all involved civil works using Sulphate Resistant Cement (SRC), Corrosion Resistant Steel, Electrical and mechanical works, inclusive of following items, units as per detailed specifications for civil, electrical, mechanical and instrumentation & PLC/SCADA Automation components with all duties and taxes etc., complete to achieve BOD < 10 ppm, COD < 50 ppm, PH=5.5 to 9, TSS < 10 ppm, NH4N < 5 ppm and TP < 1 ppm, fecal coliform - NIL) to get recyclable quality of water for industrial / agricultural purposes. Ground improvement works including land reclamation with Pile foundation considering Upliftment pressure for foreshore soils at the water bodies/streams and land stabilization/pile foundation to achieve required bearing capacity, byepass arrangement up to the disposal point as directed by the Engineer-In-charge.	STP Primary & Secondary Tretament	STP Primary & Secondary Tretament	APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	1,95,00,000.00	MLD	273000000
0	**(a) Stilling Chamber:** Providing and constructing RCC M30 & CRS steel stilling chamber for the peak flow of 2.25 DWF with 0.5m free Board and 1.2m RCC walkway all around the periphery. Each compartment will have phosphor, bronze, steel gates with extension road, head stock, operating wheels, SS Railing of SS316 grade etc. The work includes providing and making necessary bypass arrangement & to connect the flow to screen chamber by approach channel as directed and as per specifications.			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		
0	**(b) Screen Chamber (6 mm):** Providing, constructing, testing and commissioning of screen chamber, designed peak flow of (2.25 X DWF) in RCC (M-30) & CRS Steel, including inlet pipe/channel from inlet chamber, outlet pipe / channel to Vortex grit tank, free board of 0.5 m minimum, RCC walkway minm 1.2m width with SS Railing of SS316 grade, RCC staircase of 1.2m width from GL to screen chamber with manual Standbye Screens (10 mm openings) with mechanical conveyor systems for the screenings. All the screens shall be of SS 316.			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		
0	**(c) Vortex Grit Tank:** Providing and constructing continuous grit removal tank consisting of two chambers with necessary Grit washer, Screw Classifier & Vortex Propeller drive Motor mechanically operating in auto mode in RCC M30 capable of removing > 95%, 0.15mm size particle and above, having specific gravity 2.65 designed for peak 2.25 DWF with suitable arrangement of separation of grit from putrescible solids. Inlet and outlet channels of required sizes as maybe required to connect the flow to connecting unit etc., complete including hydraulic testing for water tightness of structure having minimum FB of 0. 5m, wash out arrangement to Grit chamber and platform minimum 1.2m wide RCC walkway with SS Railing of SS316 grade shall be provided. The grit from Screw Classifier shall be collected through Chute. A pit for collecting grit conveyed by conveyor shall be provided. All arrangements shall be as detailed specifications and as directed by Engineer-in-Change. The MOC of mechanical equipment shall be SS 316.			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		
0	**(d) Parshall Flume :** Providing, constructing, testing and commissioning of Parshall Flume designed for average 1DWF and maximum peak flow of 2.25 DWF in RCC (M-30) & CRS Steel to measure the flow. All the arrangements shall be as detalied specifications and as directed.			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		
0	**(e-1) SBR Basins:** Providing and constructing in RCC M30 & CRS Steel, two/four SBR basins for biological removal of BOD along with Nitrification, Denitrification, Bio-P removal in compartments to handle combined hydraulic flow of 2.25 DWF incoming flow and recirculation flow including construction of selector compartments and providing 1.2m wide clear approach walkways, expansion joints wherever necessary, including foundations etc as per specifications with F/M ratio - 0.15, MLSS -2000-5000 ppm with ratio of MLVSS to MLSS 0.8, HRT between 12 - 13 hrs & SRT suitable for full fully digested sludge complete with 1 deacnter per basin , minm 2 No. of air blowers working during aeration/ fillling of a basin with 50% standby, fine bubble diffused fixed aeration grid / equipment and FB 0.5m and SWD as required. DO level in basin to be minimum 2 mg/l complete with "Oxygen Uptake Rate" control system and all related instruments Stainless Steel SS 304 decanters and all related actuating gates , valves, Instruments & automation works. The design criteria shall be considered from CPHEEO and to achieve N,P removal HRT shall be 15-18 hrs.			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		
0	**(e-2) A2O with Integrated Fixed film activated sludge Media with Secondary Clarifier:** **IFAS Tanks:** Providing and constructing in RCC M30 & CRS Steel, two/four A2O IFAS basins for biological removal of BOD along with Nitrification, Denitrification, Bio-P removal in Separate Anaerobic & Anoxic, IFAS Aeration tanks to handle combined hydraulic flow of 2.25 DWF incoming flow and recirculation flow including construction of selector compartments and providing 1.2m wide clear approach walkways, expansion joints wherever necessary, including foundations etc as per specifications with Minimum Specific growth Surface area of FAS media: 23 m2/m2, MLSS -3000-8000 ppm with ratio of MLVSS to MLSS 0.8, HRT between 9 – 10.5 hrs & SRT suitable for full fully digested sludge complete, minm 2 No. of air blowers working during aeration with 50% standby, fine bubble diffused fixed aeration grid / equipment and FB 0.5m and SWD as required. DO level in basin to be minimum 2 mg/l complete with "Oxygen Uptake Rate" control system and all related instruments Stainless Steel SS 304 decanters and all related actuating gates , valves, Instruments & automation works. The design criteria shall be considered from CPHEEO. In case FAS technology is designed to achieve N,P removal HRT shall be 9-10.5 hrs. Clarifier / Clarifier with Tube Settler : Designing, providing and constructing in RCC mixed (M :30) with CRS Steel, basins for settling of solids and providing 1.2 m wide clear approach walkways, expansion joints wherever necessary, including foundations, paintings etc as per specifications. and with all other related works/arrangements shall be as as detailed specifications and as directed. All arrangements shall be as detailed specifications and as approved by Engineer-in-charge			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		
0	**(f) Chlorine Contact Tank:** Providing and constructing chlorine contact chamber of adequate capacity to deal with 1 Dry Weather Flow. The chlorine contact tank should be desinged considering the rate of maximum decant flow per cycle and minimum contact time for the decanted flow shall be 30 mins. Chlorine to achieve 99.99% coliform reduction. Chlorine dose shall be maintained as per standard provisions, including designing, providing and constructing water supply provision for chlorination, including providing dewatering and bypass arrangement jointing to final effluent mains and outlet weir etc., complete. The effluent quality should match with the standards laid down by AP state Pollution Control Board and as per obligatory provision and as detailed specification and as directed by Engineer-In-Incharge.			APDSS/BIS/MORTH/NEC/NLC/CPHEEO/GOI Advisories	0		

0	**(g) Chlorinator and Chlorinator Room / Tonner Room:** Providing and constructing chlorinators vacuum type 2 Nos, with auto switch over facility and having capacity for dosage of adequate chlorine to ensure 99.99% coliform reduction as per obligatory provisions and detailed specifications with necessary provisions of having chlorinator room of adequate size. The chlorinator equipment shall include cost of chlorine cylinders/tonner, piping, valves, measuring and controlling equipments safety devices, lifting equipments, etc., complete as per IS-10553 (part ii) 1982. The tonner room should have minimum 5 MT capacity crane for loading and unloading facility. Tonner storage should be distinctly isolated and should be for minimum storage as directed in the design specification and as per gas laws 1981 and factory act shall be provided. All other matching amenities shall be provided, 3 MT gantry rail shall be provided for full length of tonner room at minimum 4.5 m height from level of			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(h) Sludge Sump cum Sludge Pump House:** Providing and constructing of sludge sump and pump house of appropriate size with pumps, Air Blower for Coarse bubble diffuser system and ceiling height minimum of 4.5 m over sump for discharging sludge to centrifuge and recycling of flow for blending of sludge using DI pipe complete as per detailed specification and as directed by Engineer-in-Charge.			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(I) Sludge Centrifuge Building with Centrifuges / Belt Press / SCrew Press Equipment:** Providing, constructing and installing including foundation etc., sludge centrifuge/Belt press/ Screw Press to handle the flow of 1 day in 20 hours per unit with sludge dewatering unit drain etc., complete as per specification, sludge centrifuges/belt press/ Screw Press equipment with the necessary arrangement as per detailed specification mentioned in tender and obligatory provisions to be provided with satisfactory functioning. All associated ploymer dosing systems shall be provided.			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(J) Outfall Sewer:** Providing and constructing appropriate outfall sewer of RCC NP3 pipe to discharge treated effluent from outlet chamber (after basin / chlorination tank) including necessary chambers for inspection and cleaning including necessary excavation, dewatering, refilling, concrete encasing / bedding concrete step to reach the nallah bed level, pitching and energy disspation chamber in stream/ nallah portion etc., complete as per the approved plan and as directed by Engineer-in-Charge			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	(k) **Piping work** in CI/DI D/F -K9 class for pressure main with HAC lining, including CI/DI Sluice Valves, Reflux Valves, CI Gates, MS Epoxy linining pipe for Air supply, SS down comers, SS pipe for coarse bubble diffusers in selector zones & DWPE dosing for sludge, PVC piping for Coarse bubble diffusers in sludge sump : Providing , laying and jointing pipes other than those already included in the above items for interconnection by pass RCC NP3 pipe/ drains, etc., of all units including adequate numbers of manhole chambers. The item includes excavations, refilling and hydraulic testing of pipes, valves, gates, accessories and cost of jointing materials. The items includes required channels with gates for interconnection of units by pass drains etc., for all units as directed etc., complete as per detailed specifications.			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(l) Providing Instrumentation and Automation works;** EMF / Ultra sonic Flow meters for Raw Sewage pumping station (RSPS), Raw Sewage Line, Sludge Waste Line, Differential Level Indicators - at RSPS screens, Screens, Level transmitters in RSPS, SBR Tanks/ IFAS Tanks, Sludge Sump, CCT. Pressure transmitters - at RSPS, Air blower discharge Level Switches - for DWPE Dosing Tanks, DO transmitters - for each biological tanks SBR Tanks/ IFAS Tank Pressure gauges, cabling, junction boxes; non redundant PLC panel, cabling trays, earthing, UPS, SCADA, Computers, printers etc. complete for automatic operation and monitoring of the RSPS and Sewage Treatment Plant as per detailed specification and as directed by the Engineer -In-Charge			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(m) Electrical works:** Providing Motor Control Center, Power & Control Cables, Cable trays/Raceways, junction boxes, earthing, Variable Frequency Drives, Air Blowers, Ligthtning arrestors, STP area lighting indoor & Outdoor for all STP components etc., receptacles as required complete as directed by the Engineer -In-Charge			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(n) MCC cum PLC Panel /STP SCADA Building:** Providing and construction of MCC and Control Room building. This shall be a building having adequate carpet area and complete as per specifications including necessary excavation, suitable foundation, RCC M20 framed structure Brick masonry, 20mm thick internal and external plastering of CM (1:3), Aluminium/ UPVC Doors, Windows with glass panels, vitrified tile flooring and skirting and all other allied items, fixtures fastening electrification arrangement, water supply arrangement etc complete. The building should have beautification, comminication systems like mobiles phones, Internet with Router arrangement.			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0		
0	**(O) Air Blower Room :** Providing and construction of Air Blower Room. The height of the Building shall be as per vendor recomendation for lifting the Blowers & Motors. These shall be buildings having minimum adequate carpet area and complete as per specifications including necessary excavation, suitable foundation, RCC M20 framed structure Brick masonry, 20mm thick internal and external plastering of CM (1:3), Aluminium/UPVC Doors, Windows with glass panels, vitrified tile flooring and skirting and all other allied items, fixtures fastening electrification arrangement etc complete. Lifting arrangement			APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0

	Supply Installation Testing And commissioning of CPCB IV+ DG Set complete with 1500 RPM Diesel Engine of suitable BHP & AC Brush less Alternator mounted on a common base Frame & coupled through a flexible coupling or close coupled. Alternator 1. 1500 RPM, 1P or 3P, Brushless type, screen protected, revolving field, Self-excited alternator conforming to IS/IEC 60034-1 IP23, with standard Alternator Protection (over voltage, over speed & Under voltage) 2. A reliable long life with superior class 'H' insulation with temperature rise to Class H Diesel Engine: Engine: Engine should comprise of Silencer, Electronic governor from >25 KVA & above, suitable rating battery , Battery charging alternator, battery charger , Inbuilt Fuel tank with fuel pipe, AVM pads , Control panel with 3P MCCB of suitable rating with short circuit protections (25kA,36kA, 50kA) with microprocessor based controller indicating genset parameters (i.e. volt, amps, KWH, KVAR, Hrs etc.), The diesel engine shall be capable of providing 10% overload for 1 Hr for every 11 Hrs of continuous running at full load. The DG set shall be supplied as per OEM specifications and shall be tested at site along with below. 1. CRDI Engine >25 KVA DG set 2. Water cooled Radiator coupled to engine 3. Dry type air cleaner with service indicator 4. First fill of lube oil, Coolant & first fill of Diesel 5. Electrical starter motor with soft start System 6. Battery charging alternator 7. Remote Monitor system >58.5 KVA & Above 8. 2 years / 5000 Hrs Warranty from commissioning or 30-month form supply. 9. Emission control system - EGR & (DOC, SCR for >75 KVA DG set) 10.10 Mtrs Exhaust pipe from Silencer Genset Controller: 1. Microprocessor based genset monitoring, metering and control system with full graphics LCD display for easy front panel access. 2. AMF relay, manual and remote start / stop modesfor 1-ph & 3-ph gensets 3. Backlit and full graphics display with power saving feature	DG Set	DG Set	APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0.00	0	0
	4. Engine parameter monitoring -Lube oil pressure, Engine coolant temperature, Fuel level, Battery voltage, Engine running hours 5. AC Alternator parameter monitoring -Voltage L-N & L_L, Current, kW, kVA (Phase & Total), Frequency, kWH, PF 6. Genset Protection: Engine: Low lube oil pressure, High coolant temperature, Battery High/Low Volts, Fail to Start, Sensor failure, Low fuel level, Overspeed AC Alternator: Over/Under Voltage, Over/Under, Frequency, Loss of AC sensing, Over frequency, Over Current, kW Overload, Unbalancing load 7. Maintenance notification based on Engine Run Hour & due date 8.Communication: USB port, RS485, CAN 9.30-50 Event logs Acoustic Enclosure: 1. Specially designed to meet stringent MOEF/CPCB IV+ norms 2. Weatherproof, powder coated Acoustic enclosure for DG set for sound attenuation fabricated from 1.2 mm / 1.6 mm CRCA sheet steel (structure) with side wall fabricated from 1.2mm /1.6 mm CRCA sheet and filled with PU Foam/Rockwood for Fire retardant acoustic and for better safety 3. Designed to operate in extreme climatic conditions in temperatures ranging from -10 deg to 55 deg without any external aid 4. Fabricated base frame with AVM pads. 5. Noise level is less than 75 db (A) at a distance of 1 Mtrs as per CPCB norms, complete in all respect. following capacity:	DG Set	DG Set	APDSS/BIS/MOR TH/NEC/NLC/CP HEEO/GOI Advisories	0.00	0	0

GENERAL ABSTRACT

NAME OF THE WORK : APCRDA - "Construction of Roads, Drains, Water Supply, Sewerage, Utility Ducts for Power & ICT, Reuse waterline, Avenue Plantation, compatible with trunk infrastructure in Layouts for Land Pooling Schemes for kondamarajupalem(P), Lingayapalem(P), Uddandarayunipalem(P), Velagapudi(P) and Mandadam(P) Villages in Zone-7 Area in Amaravati Capital City, Andhra Pradesh on Lump sum Contract (% Percentage Tender) including DLP of 2 Years"

SL.No	Description of Items	Amount in Crores
Part A - Basic Infrastructure Cost (Capex)		
1	Roads	416.36
2	Storm Water Drains	144.85
3	Water Supply	30.10
4	Waste Water	55.31
5	Power & ICT	100.02
6	Reuse Water	10.75
7	Retrofitting Works	10.04
8	Cost towards Investigation,Designs and Drawings at 0.532%	4.08
9	Cost towards Implementation of Environment and Social Management Plan (ESMP) at 1%	7.68
	Sub Total part - A	**779.19**
Part B - Provisions		
1	Seignorage Charges of all works	10.84
2	Extra @ 100% on Seignorage Charges towards consideration amount	10.84
3	Extra @ 2% on Seignorage Charges towards MERIT	0.22
4	Extra @ 30% on Seignorage Charges towards DMF	3.25
5	NAC @ 0.1% on Part A & B (1+2+3+4)	0.80
6	GST @18% on Part A & B (1+2+3+4+5)	144.93
7	Provision for STP including Raw Sewage Pumping Station & Tertiary Treatment including O&M for 7 Years.	170.94
8	Administrative Charges @2% on (A)	15.58
9	Provision for Street furniture and implementation of street design guidelines, provisions for Sustainable Urban drainage systems and other sustainable features, Price Adjustment, Contingences, AMR for property connections and unforeseen items etc...	98.93
	Sub Total part - B	**456.33**
	GRAND TOTAL Part (A + B)	**1235.52**

AEE 14/2/25 DFE E.E 14/2/25 SE 14/2/25

Administrative Sanction accorded for Rs. 1235.52 crores vide G.O.Ms No. 6 MA & UD(CRDA) dept., Dt:- 17.01.2025. Technical Sanction accorded for Rs. 1235.52 crores vide CER No. 19/CE(Infra-I)/2024-25 Dt: 14/02/25.

14/2/2025

Chief Engineer
APCRDA, VIJAYAWADA.

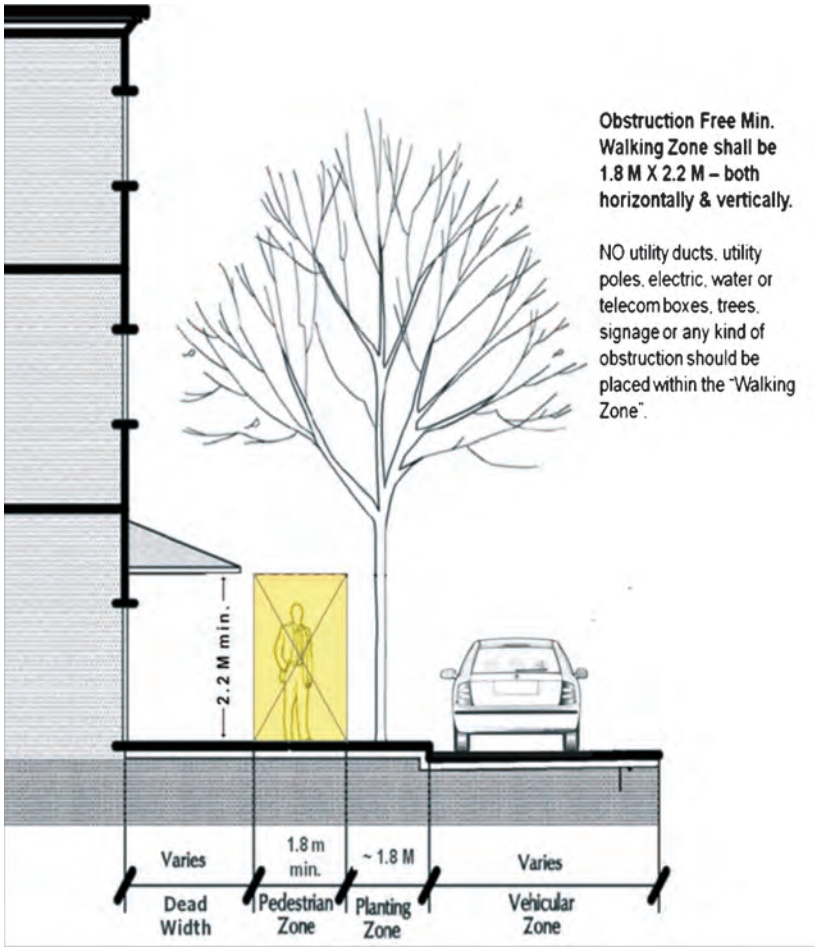

Fig. 1 Clear Walking Zone is separate from Planting Zone

6.1.4 *Clear height*

A clear height of 2.2 m is required for the entire width of the footpath walking zone. No tree branches, trees, utility poles, electric/water/telecom boxes or signage should be placed within the clear height and width of the Walking Zone.

6.1.5 *Width*

6.1.5.1 The width of a footpath is fundamental to the effective functioning of the pedestrian system. Without an optimum width, footpath will not help move enough pedestrian and will discourage them from walking. The width of side-walks depends upon the expected pedestrian flows and could be fixed with the help of guidelines given in **Table 1.** The minimum width of a clear unobstructed pathway should be 1800 mm in roads of right of way of 10 m and above. This allows two wheelchairs to pass each other comfortably **(Fig. 2)**. In case of road with right of way less than 10 m or in the areas with light pedestrian traffic, a width of 1500 mm is regarded as the minimum acceptable, giving enough space for a wheelchair user and a walker to pass each other. As an exception, the width of the footpath may be considered as 1500 mm. The full width of footpath should be maintained consistently, even behind bus shelters and in front of shop. For the actual length or width of people and equipment, the clearance lengths

File No. MAU61-USI0INFR(OTH)/19/2025-IFR1 (Computer No. 2828121)
Generated from eOffice by KOMMINENI PURANDHARA CHAKRAVARTHY, WAS(KPC), WARD AMENITIES SECRETARY, MAU61-ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY on 09/0

and clear outdoor passage widths needed for those people and equipment, **Annexure-I** can be referred to.

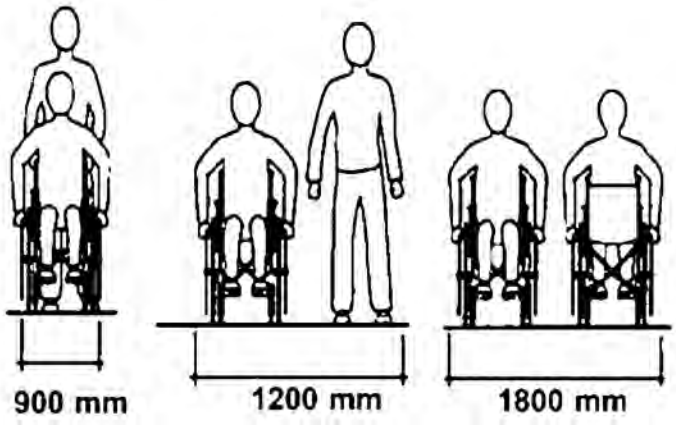

Fig. 2 Minimum Width of a Clear Footpath

6.1.5.2 Footpaths should normally be designed for a pedestrian Level of service B, thereby providing wide pedestrian facilities for pleasant and comfortable walking. Under resource constraint, Level of Service C can be adopted for deciding width of footpath **(Table 1)**. The width of the footpaths depends upon the expected pedestrian traffic and may be fixed with the help of the following guidelines subject to not being less than 1.8 m **(Table 1)**.

Table 1 Capacity of Footpath

Width of side-walk (meter)	Design Flow in Number of Persons per hour			
	In Both directions		All in One direction	
	LOS B	LOS C	LOS B	LOS C
1.8	1350	1890	2025	2835
2	1800	2520	2700	3780
2.5	2250	3150	3375	4725
3	2700	3780	4050	5670
3.5	3150	4410	4725	6615
4	3600	5040	5400	7560

The land use adjacent to roads significantly influences generation of pedestrian traffic Recommended width of footpath along various landuses are given in **Table 2.**

Table 2 Required Width of Footpath as per Adjacent Landuse

Minimum obstacle free walkway width and Residential/ Mixed Use Areas	1.8 m
Commercial/ Mixed Use Areas	2.50 m
Shopping frontages	3.5 m to 4.5 m
Bus Stops	3 m
High Intensity Commercial Areas	4 m

Letter No. 207/ADC/IPD/2024-2025, Dt. 13.05.2025

Sir,

Sub: Sub: APCRDA – LSE – Compliance to Environment Clearance and Hon'ble NGT Directions – Conditions to be complied at City and neighbourhood level – Submission of Compliance Report – reg.

Ref:
1. Proceedings of Additional Commissioner, APCRDA MAU61-EE0ENV (APCP)/3/2025-CZLE.
2. Discussions held the officials of APCRDA and ADCL officials on 12.05.2025

This is with reference to the above captioned subject, point wise response is attached as Annexure -1. Request you to take note of the above responses for further necessary action.

Yours faithfully,

Chairperson & Managing Director
Amaravati Development Corporation Ltd

Annexure -1

Amaravati Development Corporation Limited, Vijayawada
Responses to the Proceedings of Additional Commissioner, APCRDA
MAU61-EE0ENV(APCP)/3/2025-CZLE

1. Water pumping system and sewage conveyance and treatment systems are energy intensive and as such the proponent shall follow Bureau of Energy Efficiency Norms (measures taken and included in the BoQ may please be provided in Flood works, STPS, pumping stations, WTP, WS mains - pumps - Also please submit the supporting document evidence. The items if not covered shall be included in the part B fund and an order in this regard from the Head of the institution may be provided)

   Response: Administrative sanction is received, and Technical Sanction is yet to be received. While taking the technical sanction the LT pumps selected for clear water pumping and distribution system are of IE3-rated, in compliance with the norms set by the Bureau of Energy Efficiency (BEE). The HT pumps used for clear water pumping, as well as the raw water pumps installed at the intake well and WTP are based on the 3D (Demand Driven Discharge) concept. These pumps operate according to the actual demand, ensuring optimized performance. Their operation is regulated by energy-efficient devices such as Variable Frequency Drives (VFDs), which help in controlling the pump speed and reducing energy consumption. However, as the Tender will be invited on Design Built Operate, the appointed contractor will submit the detailed designs including above.

2. The proponent shall provide continuous online water quality monitoring facilities for WTPs, STPs and upstream of drinking water source at Krishna River. Results of monitoring shall be linked to SPCB / CPCB website. (Measures taken and included in the BoQ may please be provided for the relevant works- Also please submit the supporting document evidence. The items if not covered shall be included in the part B fund and an order in this regard from the Head of the institution may be provided)

   Response: Administrative sanction is received, and Technical Sanction is yet to be received. While taking the technical sanction the proposed Water Treatment Plant will feature complete automation through SCADA (Supervisory Control and Data Acquisition), which is further integrated with an AI-based Digital Twin. This integration enables real-time online monitoring of both water quality and quantity throughout the system. Additionally, a Computerized Maintenance Management System (CMMS) is proposed for the Water Supply System of Amaravati Capital City. CMMS is a software application designed to assist organizations in efficiently managing and optimizing their maintenance operations. It primarily focuses on asset tracking, work order management, and scheduling of preventive maintenance activities. However, once the system in place, measure will be taken to link to SPCB/CPCB website. However, as the Tender will be invited on Design Built Operate, the appointed contractor will submit the detailed designs including above.

3. The proponent shall encourage battery operated vehicles by providing separate lane with a provision for recharging. (decision taken regarding separate lane, recharge infrastructure, items included in the BoQ may please be provided for the relevant works - Also please submit the supporting document evidence)

Response: ADCL has issued Letter to the Design Consultant M/s. Aarvee Associates Architects, Engineers & Consultants Pvt. Ltd. to prepare a typical plan and section with the details of necessary EV charging infrastructure along with Bill of Quantities, Cost estimate to accommodate minimum 2 to 3 EV charging stations at one location. The input from the consultant is expected on or before 28.05.2025.

With reference to Arterial Roads, EV charging infrastructure will be installed on either side of the carriageway by creating a lay bye to the main carriageway with facilitation for EV charging infrastructure for various vehicles such as Bus, Car and Two Wheelers etc. In case of Sub Arterial Roads, the central two lanes are reserved for Bus Rapid Transit System (BRTS) and EV charging for BRT will be installed at respective bus depots. However, similar concept will be considered for Sub Arterial Roads also by creating a lay bye to the main carriageway, EV charging infrastructure will be provided.

4. The proponent shall create primary green spaces of 7200 Ha. Consisting of city parks, lake parks, town parks, neighbourhood parks as committed. The proponent shall create primary green space of 3924.57 Ha in the 1st phase as committed. (no. of parks in proposal stage, under execution stage, their areas may please be submitted with supporting evidence)

Response:
ADCL invited Request for Proposal for appointment of Architectural and Landscape consultants for

- Avenue Plantation with Beautification and (ii) Median and Junction Plantation with Beautification in Trunk Roads in Amaravati
- Plantation and Beautification of (i) Reservoirs and (ii) Canals and Vagus with Buffers in Amaravati
- Development of Parks with Landscape and Plantation in Amaravati

ADCL appointed a consultant for Preparation of Project Report for (i) Avenue Plantation with Beautification and (ii) Median and Junction Plantation with Beautification in Trunk Roads in Amaravati. For the remaining Request for Proposals are in evaluation stage.

ADCL has proposed the following parks in the 1st phase. The details are stated below:

Sl. No	Park	Area in Acres	Stage	Remarks
1	Sakhamuru Park	190	Proposal Stage	RFP have been called for selection of Land scape Architects
2	Ananthavaram Park	35		
3	Malkapuram Park	21		
4	Kuragallu/Nowluru -P2	233.37		
5	Undavalli/Penumaka -P2	193.18		
6	Lingayapalem -P2	19.03		
7	Abbarajupalem – P1	8.13		
8	Thulluru - P1	17.63		
9	Thulluru – P2	18.72		
10	Malkapuram-P1	12.83		

11	Mandadam-P2	15.89		
12	Kuragallu – P1	15.59		
13	Nidamarru -P2	11.15		
14	Penumaka -P2	17.21		
15	Undavalli -P2	40.16		
16	Penumaka -P2	37.68		
17	Uddandarayanipalem-P1	73.17		
	Total Area	**959.74**		

The ADCL has proposed Greenery in the Central Median of Priority Roads with length of 643.43 Km and also in the Buffer Zone with a length of 133.30 Km.

S.NO	Name of the Road	Length in KM	Green Buffer		Total Length in Kms	Central Median Length

	26.86
	31.25
Nowluru2	24.18
Sakhamuru	26.6
Tulluru	23.8
Velagapudi	38.45

With reference to Deepening and Widening of Kondaveeti Vagu, Pala Vagu and construction of Gravity Canal along with the Three reservoirs, the green buffer of 20m to 30m is proposed on the Vagus/ Canals.

Section	Approx Length (km)	Bottom Width of Canal (m)	Top Width of Canal (m)	Green Width on each side (m)	Top Width with Green Buffer (m)	Green Belt Area in Acres
Kondaveeti Vagu (23.6 km)						
Vundavalli to Krishnayapalem	3.8	75	115	30	175	56.32
Krishnayapalem to Neerukonda	7.2	75	115	30	175	10.72
Neerukonda to Sakamuru	3.6	14	65	20	105	35.57
Sakamuru to Anantavaram	9.0	10/15	30/55	20	105	88.93
Pala Vagu (16.7 km)						
Krishnayapalem to Secretariat	9.3	25	65	20	105	91.90
Secretariat to Dondapadu	7.4	12	45	30	105	109.68
Gravity Canal (8 km)						
Vykuntapuram gravity canal	8.0	40	70	20	110	79.05
Total Length (Km)	**48.3**					**568.18**

Over and above, ADCL is constructing three reservoirs i.e., Neerukonda Reservoir, Krishnayapalem Reservoir and Sakhamuru Reservoir with a total storage capacity of 0.53 TMC. As part of construction of these reservoirs ADCL is taking up green works in a total area of 80.56 Acres; 14.17 Acres and 7.23 Acres respectively.

With above, the green works that ADCL is dealing is mentioned below:

➢ Parks	:	959.74 acres
➢ Buffer Zone	:	600.00 acres
➢ Central Median	:	354.00 acres
➢ Kondaveti Vagu, Palavagu and Gravity Canal	:	568.18 acres
➢ Reservoirs 3 Nos	:	101.96 acres
➢ Total Area	:	2583.88 acres

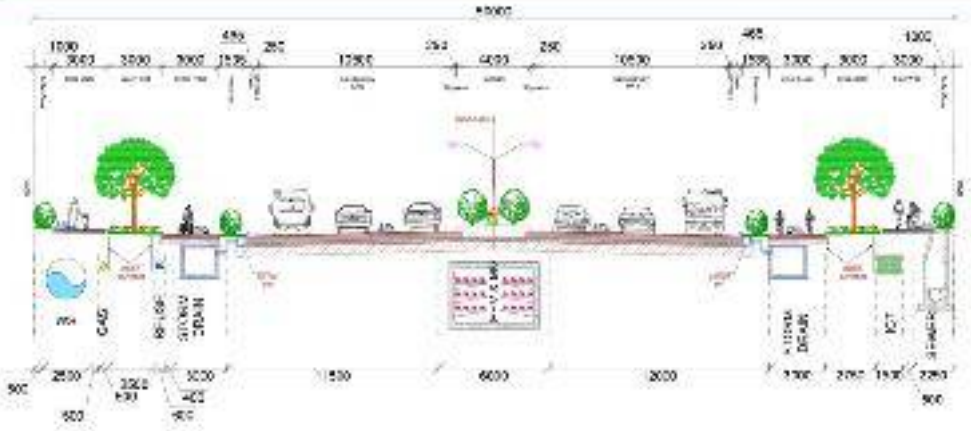
5. Proponent shall Develop at least 5 safe street crossings per km for bicycles with spacing between two crossings not more than 250m. (Details as per the plan and BoQ may please be provided with supporting document evidence. The items if not covered shall be included in the part B fund and an order in this regard from the Head of the institution may be provided)

   Response: As a part of scope of work of the Design Consultant M/s. Aarvee Associates Architects, Engineers & Consultants Pvt. Ltd. has to prepare the detailed design for cross walks at junctions including cycle track and pedestrian walkways so that the pedestrians and cyclists should cross the arterial roads/ sub arterial roads smoothly. Hence Good for Construction drawings are issued by holding the Junction locations which is under detailed design stage. Upon finalisation of the Designs model section will be prepared for necessary approval of competent authority. In Arterial and sub arterial roads, safe street crossings are placed at Junctions only.

6. Proponent shall construct a continuous unobstructed foot path on each side of all streets with ROW wider than 12 mtrs. Minimum width of footpath shall be 2 mtrs. In addition to space for trees/greenery/vending spaces and surface utilities. Width of footpath shall be determined based on pedestrian volume and have to be wider than 2m wherever required. Intermittent buffers, bollards and other physical elements should be used to protect foot paths from encroachment by motor vehicle parking. Footpath Elevation over the carriage way at all times should be less than 150 mm. All pedestrian facilities should be barrier free for universal access by all persons with reduced mobility including those with hearing and visual impairments. (for the text in bold - Details as per the plan and BoQ may please be provided with supporting document evidence. The items if not covered shall be included in the part B fund and an order in this regard from the Head of the institution may be provided.)

   Response: As a part of Trunk infrastructure sub arterial and arterial roads which is of 50m Right of way, provision of 3m each is kept for Cycle Track and sidewalk on either side. Typical sections for the same as approved by APCRDA is presented below:

Typical Cross Section : Sub-Arterial Road (50m RoW)



Sub-Arterial Road 4 Lane with 2 lane BRT

East Roads (8Nos) - E2, E4, E6, E8, E10, E12, E14 & E15 Roads

North Roads (10Nos) – N1, N2, N4, N5, N7, N9, N11, N14, N16 & N18 Roads

Typical Cross Section : Arterial Road (50m RoW)

Arterial Road 6 Lane

East Roads (5Nos) – E1, E7, E9, E11 & E16 Roads

North Roads (6Nos) – N3, N8, N10, N12, N15 & N17 Roads

7. The proponent shall ensure usage of fly ash for levelling / reclamation of low lying areas, road embankments, for raising platforms in inundated areas, and usage of fly ash based products for construction purpose including fly ash bricks, PPC cement, Concrete etc., in compliance with Fly Ash Notification issued by the MoEF under Environment (Protection) Act.(Details as per BoQ may please be provided with supporting document evidence, item if not covered shall

be included in the part B fund and an order in this regard from the Head of the institution may be provided)

Response: Not applicable.

8. No alteration to the pre-existing embankments if any should be permitted except as may be required for its strengthening for flood protection of the proposed Capital City. Even such exercise should be undertaken after detailed study of the flood pattern and hydraulics of the river or the storm water drains. (Report of the detailed study undertaken shall be shared)

   Response:
   Partly compiled. No alterations are proposed. As per the Environment clearance conditions measures shall be taken to strengthen the Krishna River Bund to minimize flood related issues.

   A detailed study on the flood pattern and hydraulics of the river will be undertaken and submitted prior to the embankment strengthening works for flood protection.

9. All the hills and hillocks in the catchment area of Kondaveeti Vagu, its tributaries and other storm water drains/channels should be treated with intensive soil and water conservation measures including afforestation so as to minimize surface run off and improve ground water recharge. (Measures proposed on the Hills and Hillocks in the capital city shall be shared with supporting document evidence)

   Response: Study will be taken up at the earliest to comply the same. A letter dated 13.03.2025 was addressed to the Principal Chief Conservation of Forests to take up soil and water measures including afforestation on hills and hillocks in their jurisdiction. ADCL will appoint an agency to take intensive soil and water conservation measures including afforestation so as to minimize surface run off and improve ground water recharge.

MUNICIPAL ADMINISTRATION AND URBAN DEVELOPMENT DEPARTMENT

(ANDHRA PRADESH CAPITALREGION DEVELOPMENT AUTHORITY)

FILE.NO:MAU61-DP0AMRV(OTH)/39/2025-DP

NOTIFICATION: On Integrating the conditions of Environment Clearance, CFE and the Hon'ble NGT with Capital City bye laws.

PublicNotice

(Section-39&41ofAPCRDAAct, 2014)

In exercise of the powers conferred under section 39(1) and 41(3) of APCRDA Act, 2014 the APCRDA, Vijayawada, as per 45th Authority resolution vide no. 550/2025 Dt: 02.06.2025, published draft notification for amendments to Zoning Regulations on incorporation of the conditions of the Environment Clearance, CFE into Capital City bye laws with respect to Hon'ble NGT. Accordingly, APCRDA invited for objections/suggestions with respect to said notification within a period of 30 days from the date of publication. The objections/suggestions received within due date are examined and disposed.

Hence notice is hereby given that proposed amendments to Capital City Zoning Regulations-2016 on incorporation of the conditions of the Environment Clearance, CFE into Capital City bye laws with respect to Hon'ble NGT as stated below are notified under section 41(4) of APCRDA Act, 2014. The modifications shall come into operation from the date of publication of this gazette notification and as appended.

Schedule

Environment Clearance Condition:

Parameter	**EC Condition**	**Proposed Amendment to AmaravatiCapitalCityZoning Regulations**
Water Management	Condition 6 of EC-Proponent Shall ensure construction of Rain water harvesting structures and Promote rain water storage and use System by considering heavy rains In the area. Proponent shall make these as mandatory by Incorporating in the Bye laws of APCRDA & CA.	Rule 606 (1): Align with AP BuildingRules2017. Rule606(1) maybereadas follows "1. AllexistingActs/Rulesand Directions issued by NGT Restrictingdevelopmentactivities near Waterbodies, Railways, Electricallines,Airport,Oil/Gas Pipelines, Heritage Structures, Religious Structures and EIA Notificationshallbefollowedin Allzones,example a) RainwaterHarvesting Structuresshallbeprovidedfor Allbuildingsirrespectiveofusage and plot size. Refer to AP Building Rules, 2017issuedvide G.O.Ms.No.119, dt:28/03/2017 Anditssub-sequent amendments. b) Provisions of the Andhra PradeshWater,LandandTrees Act2002shallbecompliedin

		Suchsitesandschemes Whereverapplicable.” c)Thedevelopmentpermit ApplicationsinCapitalCityand AGCareashouldcomplythe IGBC/ECBC/GRIHA/EDGE WhichhelpsinachievingEnergy efficiency,optimumutilizationof resourceandpromotes sustainable renewable energy. A certificate in this regard shall be submitted to the authority from the certifiedexpert at the time of application submission.” d)Alltheresidential,commercial, institutional developments in plot area 200 sqm and above rainwater storage tanks for reuse within the facility.RefertoAP Building rules,2017issued vide G.O.Ms.No.119, dt:28/03/2017 anditssub-sequent amendments. All buildings have a minimum discharge of 15,000 liters and above per day or premises consisting of 25 dwelling units and above shall incorporate wastewater recycling system. The recycled watershould be used for horticultural purposes and flushing purposes A certificate in this regard shall be submitted by the Empanelled Certified expert.

	Condition8ofEC-Proponentshall encourage low flow plumbing efficient fixtures, sensors, auto valves, pressure reducing devices including for toilets, faucet aerators and shower heads to conserve the water. Proponent shall incorporate these guidelines in the Byelaws.	Add to Rule 606 (2): Compliance with NBC and AP Building Rules Rule 606 (2) may be read as follows“2. Thebuilding requirements and standards not covered in these regulations shall be governed by Andhra Pradesh Building Rules, 2017 and are to be complied with National Building Code.” “3.The developer shall install Lowflowplumbingefficient fixtures,sensors, Pressure reducersinwashbasintaps,bath and other faucets, shower heads etc.” Certificate in this regard shallbesubmittedbya Empanelledcertifiedexpert.

Air &Energy	Condition 11 of EC-The Proponent shall ensure that DG sets shall comply with noise and emission normsprescribedbyMoEF&CCin Environment (Protection) Rules.	Rule 606: Adherence to MoEFCC norms under EP Rules IncorporationRule606.10may bereadasfollows “DGsets installed shall comply with noise andemissionnormsprescribed byMoEF&CCinEnvironment (Protection) Rules”.DG sets approvedbyauthorisedagencies ofGoshallbesubmittedwhile ApplyingforOC.
	Condition13ofEC-The Proponent shall ensure installation of solar panelsbyallbuildingsbyallocating at least 1/3 of roof topfor this purpose. This is in addition to installation of solar heaters. Proponent shall incorporate these guidelines in Byelaws	Rule 606: Adherence to MoEFCC norms under EP Rules IncorporationRule606.11may beread as follows “The developershall Install solarpanelsbyallocatingat-least1/3 ofrooftopofthebuildingsin additiontoinstallationofsolar heaters”mandatoryforall BuildingsexceptforIndividual Residential Buildingslessthan 300Sq.mts
	Condition14ofEC–Theproponent shallincorporateenergyefficiency guidelines (Energy Conservation BuildingCode). AlltheCapital complexes, Commercial, institutional and major residential complexes should be constructed followingGreenBuildingconcepts andensure	Amendment proposed in rule 606(1)And is read as follows “Thedevelopmentpermit applications in CC and AGC area should comply the IGBC/ECBC/GRIHA/EDGE which helps in achieving Energy efficiency,optimumutilizationof

	Energyefficiency,lowcarbonfoot-print, resources conservation etc. The Proponent shall ensure that all the bulk consumers of the energy shall meet a greater part of their demand through renewable energies and avoid use of fossil fuels; The Proponent shall incorporate these in Byelaws.	Resourcesandpromotes sustainable renewable energy. A certificate in this regard shall be submitted to the authority from the certified expert at the time of approval of Building permission."
Solid Waste	Condition20ofECTheproponent Shallensureusageoffly ashfor leveling/reclamationof low lying areas, road embankments, for raising platforms in inundated areas,andusageofflyashbased products for construction purpose including fly ash bricks, PPC cement, Concrete etc., in Compliance with Fly Ash NotificationissuedbytheMoEF under Environment (Protection) Act. The proponent shall Incorporateusageofflyashby ConstructionagenciesintheBye-Laws.	Rule 606: Compliance with MoEFflyash notifications IncorporationRule606.12may Bereadasfollows Thedeveloppersshalluseflyash Forlevelling/reclamationoflow Lyingareas,roadembankments, Forraisingplatformsininundated areas,orflyashbasedproducts Including flyashbricks,PPC cement, Concrete etc., for construction purpose in Constructionincompliancewith MoEFflyashnotifications.A Certificateinthisregardshallbe Submittedbytheapplicantwhile Atthetimeof OC.
Ecology & Heritage	Condition 13 of EC - All archaeological, cultural and ecologically sensitive areas (i.e. estuaries, mangroves, rocky shores,cavesetc.)inandaround the Amaravati capital city be adequately protected and conserved.Theproponentshall take appropriate measures for ProtectionofUndavallicaves.The proponent hasto declare no DevelopmentactivityZoneof100	Rule 606: ASI Notification ComplianceunderAMASRAct IncorporationRule606.13may be read as follows no development activity shall take placein contraventiontothe ancient monuments and Archaeologicalsitesandremains act,1958

	to 300mtrs. Around Undavalli caves as per ASI regulations	
	Condition 15 & 26 of EC - Development of the green belts, green corridors, avenue plantations etc., be made only with the native species with multiple uses, and the plantation should not affect the native species diversity and shall help enhance carbon stocks Deep rooted large foliage plantation along the side of the roads and in the open spaces shall be developed to act as sinks of air pollutants.	Rule 606: Plantation Specifications as per guidelines of APCRDA advisory Committee on greenery IncorporationRule606.14maybe read as follows "The developers shall develop greenery with Native and Deep-rooted Trees in Open Spaces as per the guidelines of APCRDA advisory Committee on greenery.
Disaster Management	Condition 2 of EC - The proponent shall prepare earthquake response management plan by considering the location of the city in the class III seismic zone. The proponent shall incorporate structural design requirements of buildings for Seismic Zone III in the Byelaws.	Rule 606: Consideration of Capital City zone as Seismic Zone III for Earthquake Resistant Structural Analysis. Rule 606.4 may be read follows "Building and structures shall be designed for compliance with earthquake resistance considering the Capital City as Seismic Zone III and wind loads. Structural stability Certificate by structural engineer shall mention that the norms have been followed in the design and construction of buildings for making the buildings resistant to earthquake and wind loads (in case of applicable structures)".
Construction Phase	Condition 2 of EC - The Proponent shallensurefollowingmitigation	Rule 606: Environmental management measures

Controls	measures as committed to Minimizepollutionproblemsduring Constructionstage. All the loose material either Stackedortransportedshallbe provided with suitable covering Suchastarpaulinsetc. Watersprinklingshallbedoneat Thelocationwheredustgeneration Isanticipated. 1.1. ROAD NETWORK IN LAND POOLING SCHEME LAYOUTS

The total LPS network of the Capital region has been divided into 13 zones. Each zone consists of some villages which may also come under other zones. The details about the villages under every zone are given in Table 1.1.1. Total road network in the LPS area is shown in Figure 1.1.1.

Table 1.1.1 List of Villages for Zone-wise LPS

S. No.	Zone No.	Villages Covered
1	1A, 1B	Nekkalu, Shakhamuru
2	2A,2B	Anantavaram, Tulluru, Nelapadu, Shakhamuru, Nekkalu
3	3A,3B	Shakhamuru, Nelapadu, Rayapudi & Kondamarajupalem
4	4	Anantavaram, Thulluru, Pichikalapalem
5	5 A, 5B, 5C & 5D	Anantavaram, Thulluru, Pichikalapalem, Dondapadu, Borupalem, Abbarajupalem, Rayapudi, Nelapadu
6	6	Rayapudi & Kondamarajupalem
7	7	Kondamarajupalem, Lingayapalem, Uddandarayanipalem, Velagapudi, Mandadam
8	8	Venkatapalem, Krishnayyapalem, Penumaka, Undavalli
9	9, 9A	Kondamarajupalem, Velagapudi, Malkapuram, Mandadam, Venkatapalem, Krishnayyapalem, Ainavolu, Sakhamuru, Nelapadu
10	10	Ainavolu, Mandadam, Venkatapalem, Krishnayyapalem, Nowluru, Kuragallu
11	11	Undavalli, Penumaka
12	12	Kuragallu, Nowluru, Penumaka, Mangalagiri, Tadepalli (Part), Nidamarru
13	12A	Nidamarru, Kuragallu,
14	AGC	Rayapudi, Lingayapalem, Kondamarajupalem, Nelapadu, Shakamuru

Out of the 13 zones mentioned above, detailed designs, drawings and estimates are prepared. For the remaining two zones the LPS layout detailing is awaited which are to be finalized and hence, the detailed designs could not be taken up. The zone-wise description of road network for the zones for which the detailed designs are taken up are discussed in the subsequent sections.

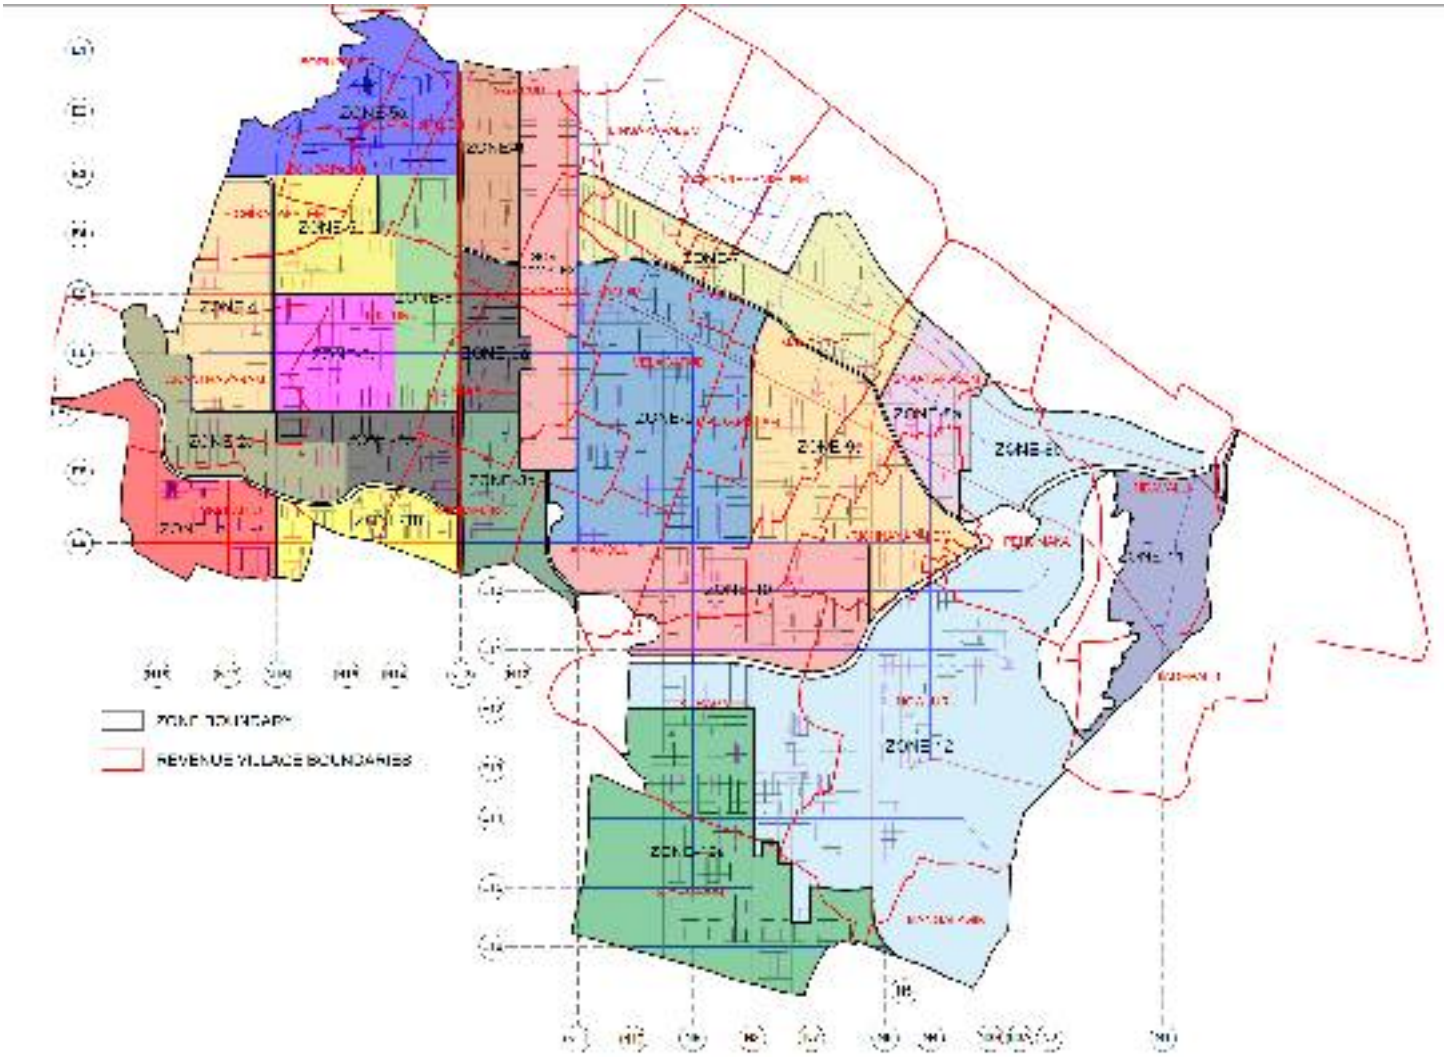

Figure 1.1.1 Village wis road network in the LPS area

1.1.1. ZONE 7

Zone-7 consists of 5 villages Kondamarajupalem, Lingayapalem, Uddandarayanipalem, Velagapudi and Mandadam. It has an optimum mix of land use comprising of industrial, residential mixed use and recreation. The road network in zone -7 is shown in Since the alignment is a green-field, no existing features are identified along the zone-7 villages of LPS. The road network in zone-7 is shown in Figure 1.1.2.

Table 1.1.2 ZONE-7 ROW WISE LENGTHS

Proposed ROW	Lanning	Road length in Km
25m	4 lanes, with Median	22.26
17 m	2 lanes (7 m Carriage way)	37.22
15.6 m	2 lanes (6 m Carriage way)	15.37
12 m	2 lanes (6 m Carriage way)	0.14
Total		74.99

1.2. DESIGN BASIS

1.2.1. GENERAL

The basic aim of designing is to identify technically sound, environment-friendly and economically feasible road improvement options for constructing and providing connectivity of the project corridors. This chapter has been structured in a way that deals with the aspects of highway improvement proposals, highway geometric design and design of miscellaneous items.

Design of road sections has been done according to the design standards set for the project and improvements identified at the initial stage of the project.

Based on the various field and map studies and with clear understanding of the master plan, proposed horizontal and vertical designs for all the priority road corridors, intersections and total road network have been carried out.

1.2.2. DESIGN STANDARDS

Highway design is the process whereby the layout of the road in specific terrain is designed to meet the needs of the road users, keeping in view the road function, type and volume of traffic, potential traffic hazards and safety, capital cost, maintenance costs, vehicle operating costs, environment impacts, aesthetics as well as convenience of the road users. The principal geometric features for fulfillment of these objectives are road classification, horizontal alignment, vertical alignment and the typical road cross-sections.

Standards and Technical Specifications applicable for the design and construction of project components are:

- Indian Roads Congress (IRC) Codes and Standards shall invariably be followed.
- Specifications for Road and Bridge Works issued by the Ministry of Road Transport & Highways (MORTH) hereinafter referred to as MORTH or Ministry's Specifications.
- Any other standards referred to in the manual and any supplement issued with the bid document.

For aspects not covered by IRC and BIS, international standard practices, such as, British and American Standards can be adopted.

The Consultants have referred to the latest IRC publications and MORTH circulars regarding design standards in India as well as the international American and Canadian geometric design guidelines. The relevant Indian and international design standards consulted are given in Table 1.2.1.

Table 1.2.1 Main IRC Publications

S. No.	Code/ Document No.	Title of the Publication

1.2.3. HORIZONTAL ALIGNMENT

The horizontal alignment of the total LPS road network is designed for a speed of 40kmph. All the LPS roads center lines are obtained after prior checking of the utility requirements. The

center lines obtained for each village in every zone have been designated with corresponding RoW.

All the 25 m roads are named as "A" type roads. All 17 m roads are named as "B" type roads. All 15.6 m, 12 m and 9 m roads are named as "C" type, "D" type and "E" type roads respectively.

Since all the roads are almost straight, no provision of super-elevation or horizontal curves for any road has been provided.

1.2.4. VERTICAL ALIGNMENT

The Vertical design of each road in the LPS zone has been carried out by taking into consideration the existing ground profile. All the Roads follow a hierarchy of 25 m, 17 m, 15.6 m, 12 m and 9 m.

FRLs are fixed based on the flood management for these roads, all the roads (25m, 17 m, 15.6 m, 12 m and 9 m). The Finished Road Levels (FRL) of the internal roads are designed in such a way that min gradient of 0.2% is enused for all the roads for effective drainage.

Both summit curves and valley curves were designed as per IRC guidelines. The design parameters for Plain/Rolling terrain are given below in Table 1.2.2.

Table 1.2.2 Lane Design parameters for LPS road network

S. No.	Description	Details
1	Design Speed for all LPS Roads	40 Kmph
2	Camber (Flexible & Rigid)	2.5% & 2%
3	Maximum super-elevation	4%
4	Minimum Stopping Sight Distance (SSD)	45 m
5	Minimum Intermediate Sight Distance (ISD)	90 m
6	Minimum vertical gradient	0.3 %
7	Ruling maximum vertical gradient	4 %
8	Minimum length of vertical curve	20m

1.3. TYPICAL CROSS-SECTIONS

The four main categories of roads proposed in the Master Plan follow well assigned roles of access and mobility through a hierarchical system. These roads are Major Arterial, Arterial, Sub

Arterial and Collector. In addition to these a special sub arterial road for direct access to the main CBD is provided in the plan and is named Seed Capital Access Road. In addition to these roads, local roads and streets will be planned (as part of local area plans/LPS) for direct property access and for localized area wide traffic circulation. Major Arterial roads have a Right-of-Way of 60m, Arterial roads and Sub-Arterial roads have RoW of 50 m and Collector roads have Right-of-Way of 25m. Of the LPS road network, various roads depending on their usage have been classified with reference to the Right-of-ways. Thus, collectors and local streets have been classified as shown in Table 1.3.1.

Table 1.3.1 Summary of Road Network for Land Pooling Scheme (LPS)

S. No.	Type of Road	Right of Way	Road name
1	Collector Roads	25 m	A
2	Local streets	17 m	B
3		15.6 m	C
4		12 m	D
5		9 m	E

1.3.1. 25M ROW

The first category of roads, the highest in hierarchy are Collector Roads. Collector roads functions as the main access road network for residential pockets, commercial and educational institutions, other local activities and buildings. These roads will be utilized by various road users for local circulation as well in addition to the access needs. The typical cross sections are as shown in the figures 1.3.1.

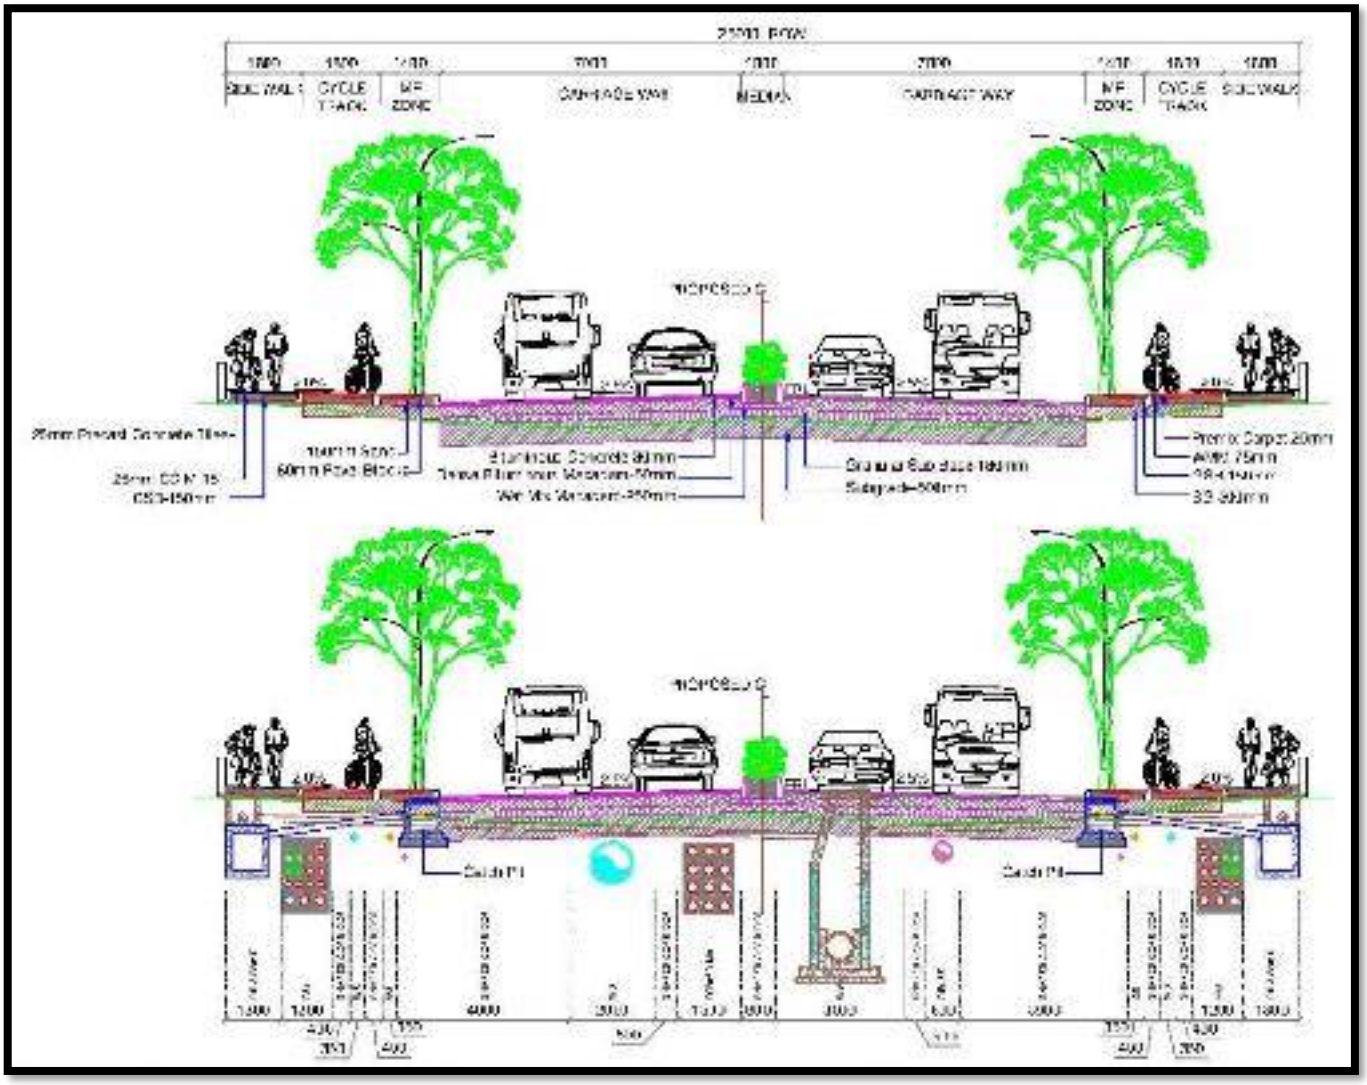

Figure 1.3.1 Typical Cross-section of 25 m ROW

The roads with 25 m RoW is of 4-lane divided carriageway with 7 m carriageway on both the sides and a median of 1 m. Along the carriageway, Multi-functional zone of 1.4 m, cycle track and side walk of 1.8 m each are designed. The pavement composition of every component will be explained in detail in the pavement design chapter. Storm Water Drain has been proposed to be under both the sides of the carriageway which runs all along the length of the road.

1.3.2. 17M ROW ROADS

The roads with 17 m RoW is of 2-lane undivided carriageway of 7m wide for both direction traffic. Along the carriageway, multi-functional zone of 1 m, cycle track and sidewalk of 1.8 m each are designed. 17 m roads are designed as rigid pavement. The pavement composition of

each and every component will be explained in detail in the pavement design chapter. Storm Water Drain has been proposed to be under both the sides of the carriageway which runs all along the length of the road. The typical cross section for 17m ROW roads is as shown below in Figure 1.3.2.

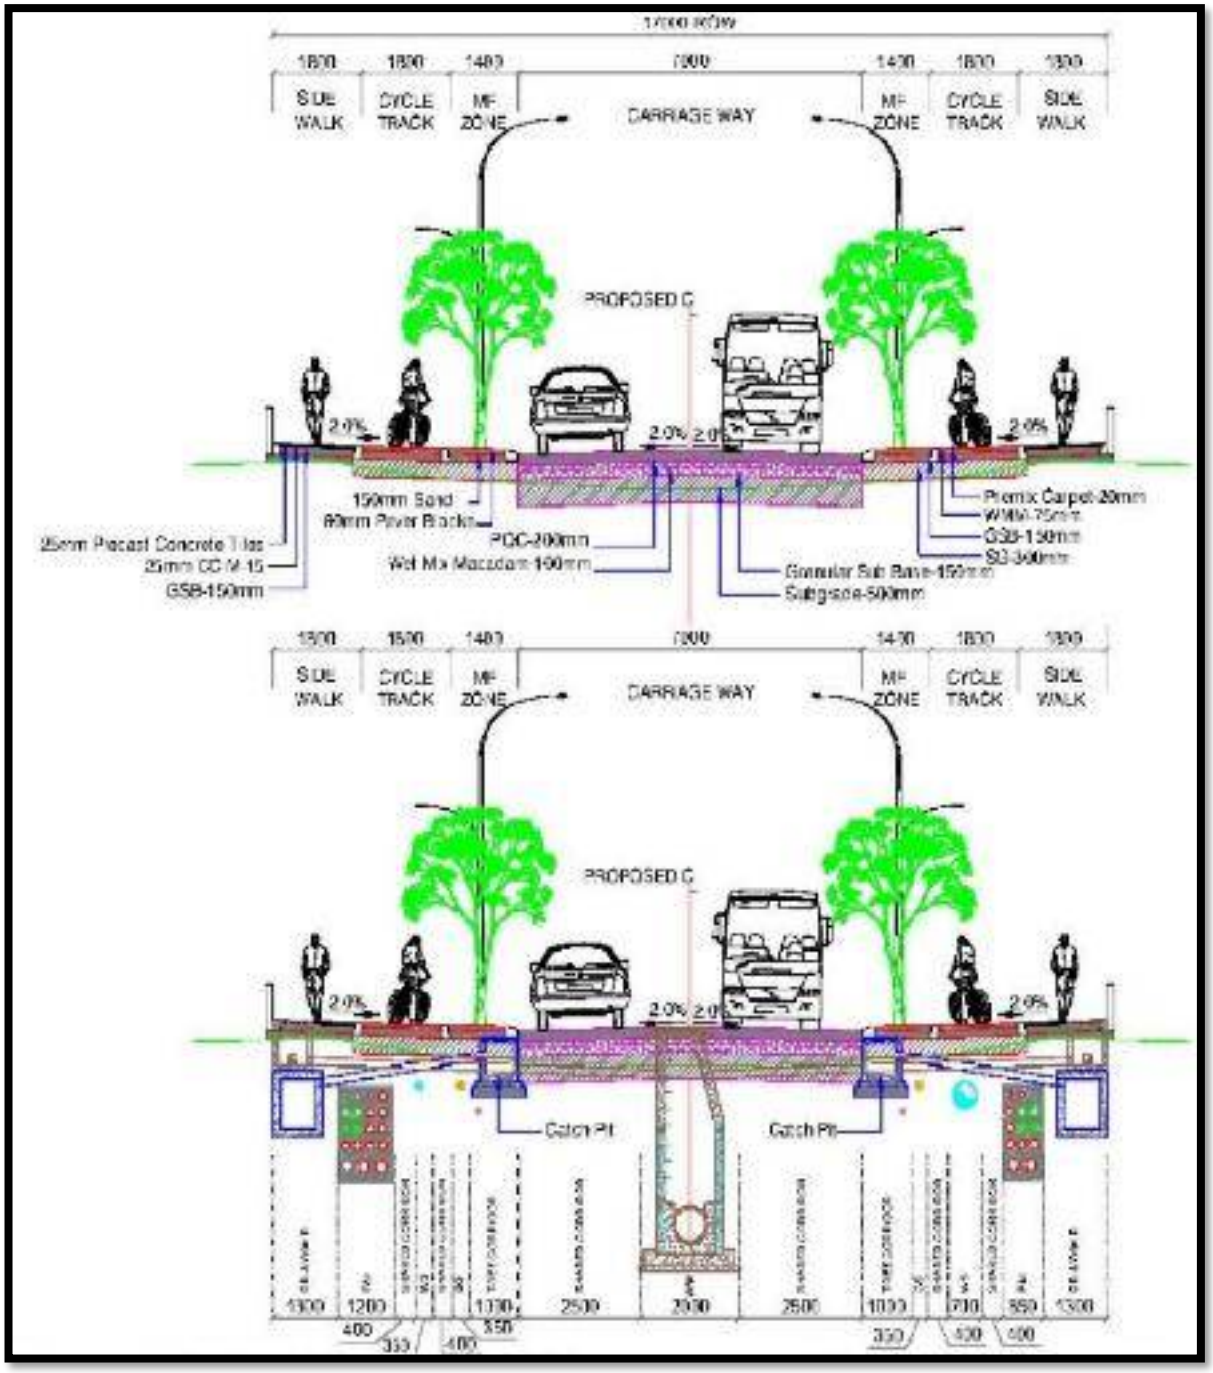

Figure 1.3.2 Typical Cross-section of 17 m ROW

1.3.3. 15.6M ROW ROADS

The roads with 15.6 m RoW is of 2-lane undivided carriageway with single side 6 m carriageway without a median. Along the carriageway, multi-functional zone of 1.4 m, cycle track and sidewalk of 3.4 m are designed. 15.6 m roads are designed as rigid pavement. The pavement composition of every component will be explained in detail in the pavement design chapter. Storm Water Drain has been proposed to be under both the sides of the carriageway which runs all along the length of the road. The typical cross section for 15.6m ROW roads is as shown below in Figure 1.3.3.

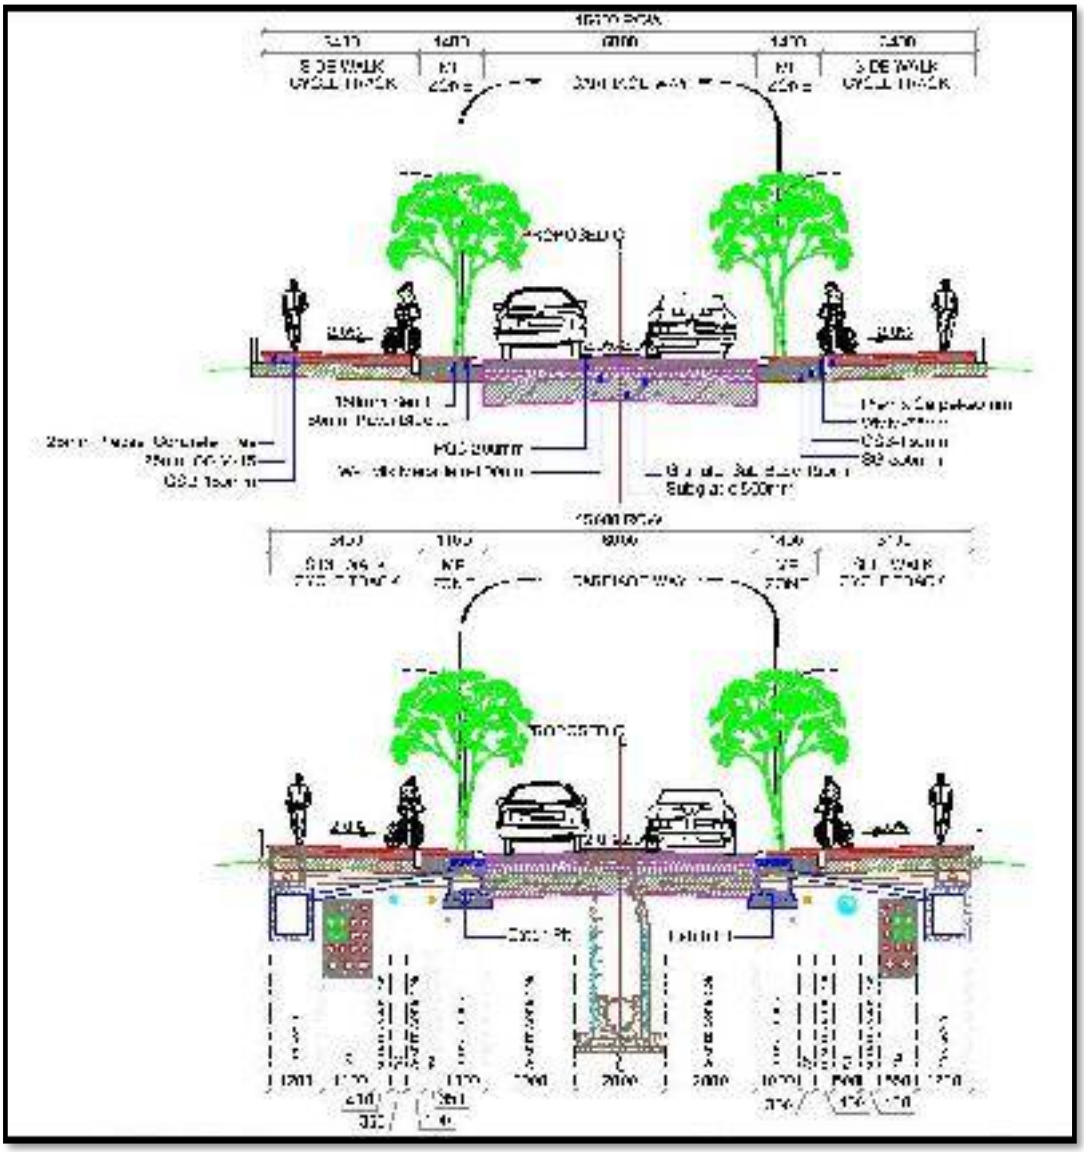

Figure 1.3.3 Typical Cross-section of 15.6 m ROW

1.3.4. 12M ROW ROADS

The roads with 12 m RoW is of 2-lane undivided carriageway with single side 6 m carriageway without a median. Along the carriageway, Multi-functional zone of 1 m and side walk of 2 m are designed. 12 m roads are designed as rigid pavement. The pavement composition of every component will be explained in detail in the pavement design chapter. Storm Water Drain has been proposed to be under the carriageway to single side which runs all along the length of the road. The typical cross section for 12m ROW roads is as shown below in Figure 1.3.4.

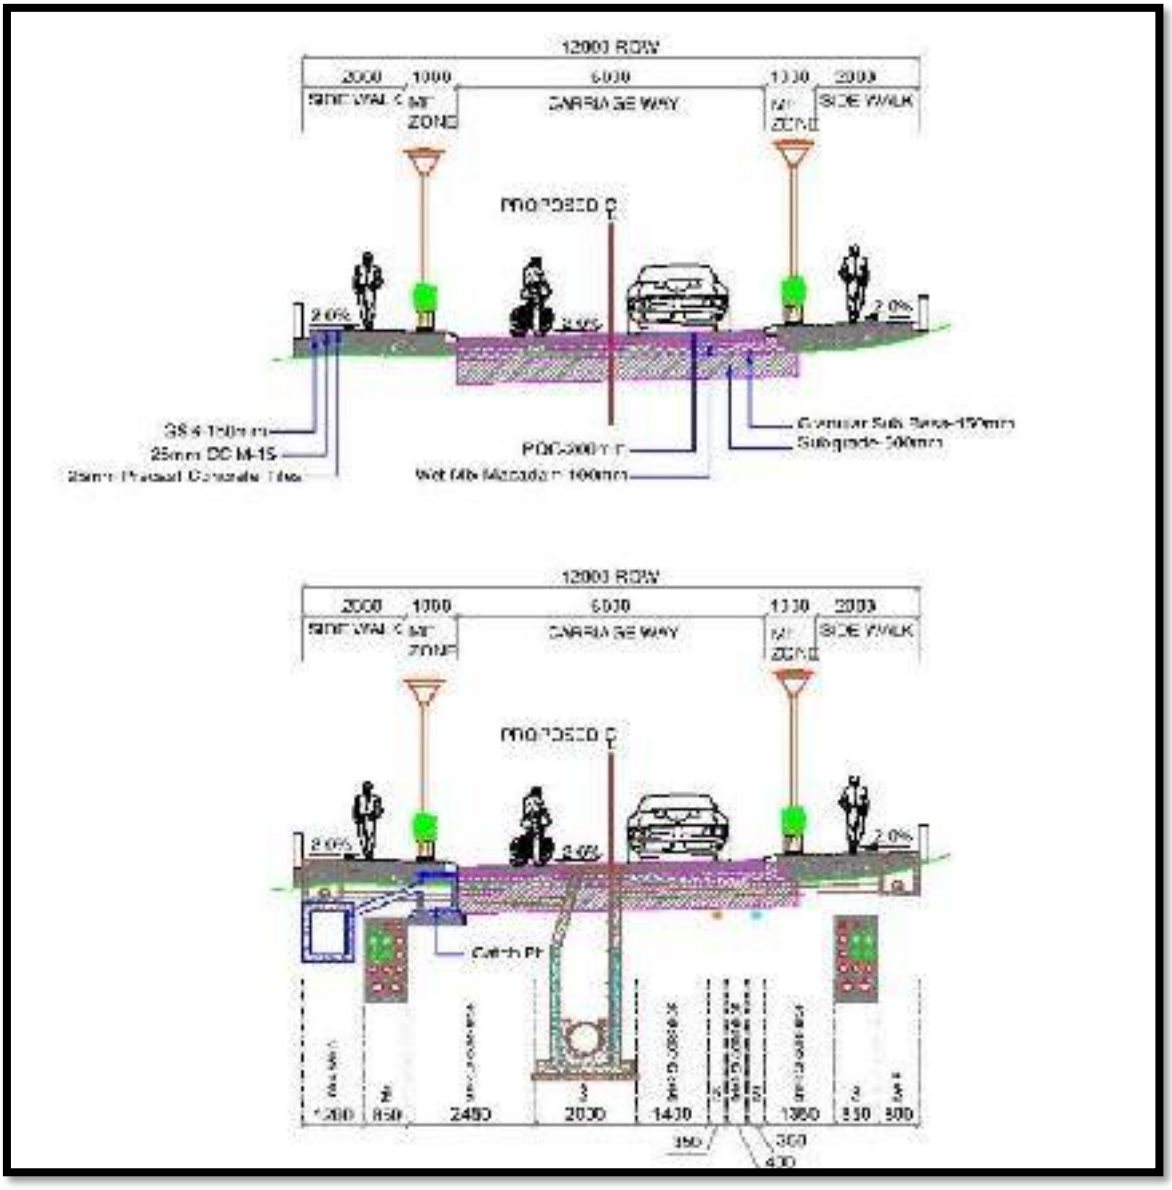

Figure 1.3.4 Typical Cross-section of 12 m ROW

1.3.5. 3D VIEWS OF CROSS-SECTIONS

The cross sections of the roads are prepared for clear identification in 3-Dimensional view. The same has been presented for different roads.

1.3.6. 25 M ROW

The junctions and streetscape plans coming under 25 m RoW are depicted in the below figures.

1.4. TYPICAL JUNCTION PLANS

The typical junction plans for the whole LPS network have been given in the figures below.

All the junctions within LPS network are designed in such a way that all the features are well connected to other legs of the junctions. The junctions are designed in such a way that out of total, 40% junctions are designed as one with the table tops and remaining 60% junctions are designed as the ones without table tops. Table top provision is a measure of traffic calming. Table tops are provided at the junctions where majority of the land use is residential and are not provided at the junctions where majority of the land use is commercial. This is because, since the pedestrian movement at the residential land use will be comparatively high when compared to that at commercial land use areas, those places are designed as table tops to curb the speeds of the fast-moving vehicles.

Junctions for each RoW have been designed keeping in mind the areas for safe turning of the vehicles. Sufficient turning radius has been provided for every combination of the junction.

1.4.1. 25M – 25M ROW ROAD JUNCTION

Junction at 25 m – 25 m crossing has been designed for a turning radius of 14 m and the swept path analysis has been carried with the adopted turning radius. The turning radius has been confirmed after the satisfactory results of swept path.

Junctions are designed in such a way that they are provided with pram ramps, which provides accessibility for disabled pedestrians.

When both the roads are of 25 m RoW, the plans of the corresponding junctions are as follows. The below figures show the variation in junctions with table tops and junctions without table tops.

Figure – 1.4.1, Figure – 1.4.3 & Figure 1.4.5 shows the typical junction without table tops and Figure – 1.4.2, Figure – 1.4.4 & Figure 1.4.6 shows the typical junction with tabletops for 25 m – 25 m +, T and L junctions respectively.

1.5. PAVEMENT DESIGN

1.5.1. PAVEMENT DESIGN OBJECTIVE

Pavement is the most significant component of a road and therefore its design strengths must be assured to support the projected traffic loading throughout the design period. The Objective is to determine the total thickness of the pavement structure as well as thickness of individual structural layer components. Design strength of pavement must be adequate to support the projected traffic loading throughout the operation period.

1.5.2. DESIGN GUIDELINES

New pavements shall be designed in accordance with IRC: 37 or any other international standard method/guidelines, subject to the condition that the overall pavement composition shall not be less than the minimum requirement specified in IRC: 37. Rigid pavement shall be designed for a period of not less than 30 years, in accordance with the method prescribed in IRC: 58.

1.5.3. PAVEMENT DESIGN

All the LPS roads are classified as per Right-of-Way (ROW) and are designated as 25 m, 17 m, 15.6 m, 12 m and 9 m. Of these roads, 25 m RoW roads are designed as flexible pavement and other roads are designed as rigid pavement.

1.5.4. DESIGN INPUTS

1.5.4.1. TRAFFIC AND SUB-GRADE CHARACTERISTICS

Since the road network of LPS falls in green-field and there is no traffic, the pavement design has been carried out by assuming some of the design factors like traffic, MSA etc.

Expecting the feature traffic on proposed roads in LPS Zones were designed for minimum of 5 MSA for flexible pavement and 150CVPD for rigid pavement. The effective CBR of the soil considered for the LPS roads is around 7%.

1.5.5. DESIGN OF 25 M ROADS

Since these types of roads are designed for flexible pavement and as per the inputs, values are adopted from IRC: 37 Since the alignment is green-field, the anticipated traffic is more of non-commercial vehicles than commercial vehicles as the road network passes through the residential areas. Comparatively high volume of traffic is likely to ply on these roads when compared to other roads. The flexible pavement of these roads has been designed with inputs as CBR and MSA.

As per IRC: 37, crest thickness and pavement composition for the effective CBR of 7% and design MSA of 5 has been taken from the following (plate-5) figure 1.5.1.

Figure 1.5.1 Crest Thickness and Pavement Composition for 7% CBR of and 5 MSA

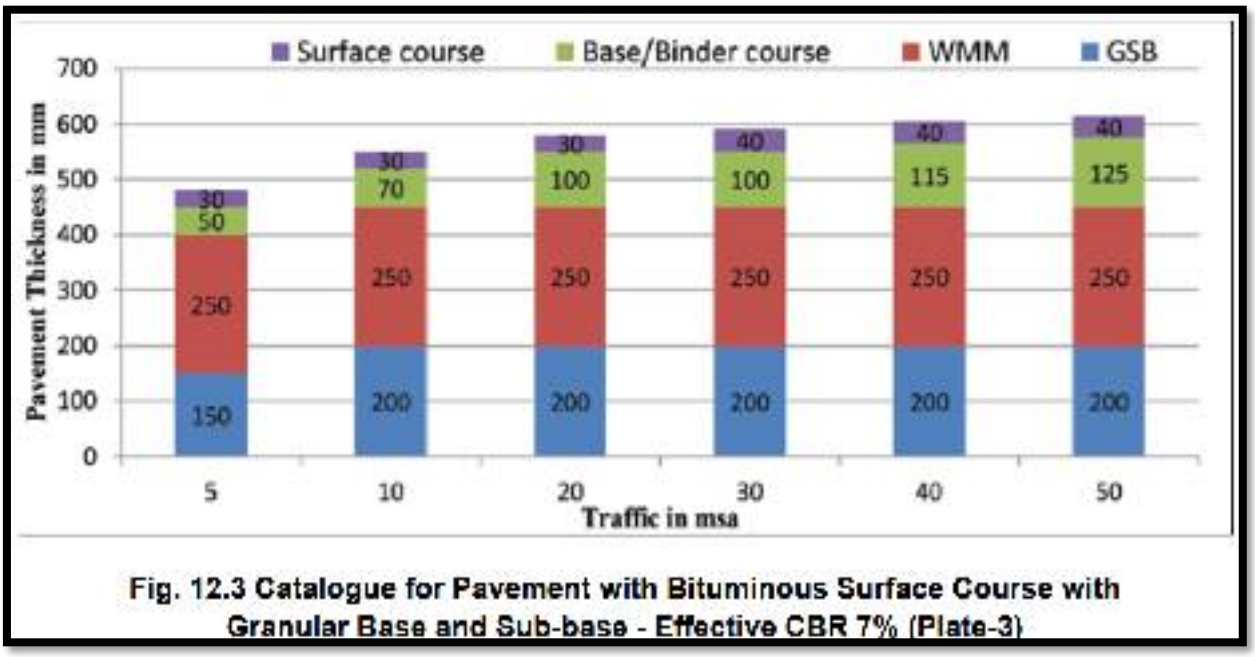

Fig. 12.3 Catalogue for Pavement with Bituminous Surface Course with Granular Base and Sub-base - Effective CBR 7% (Plate-3)

From the figure 1.5.1, for 5 MSA and 7% CBR, the pavement thickness of various layers has been designed considering these values as minimum. Thus, the BC layer should be provided with a minimum thickness of 25 mm and 30 mm has been provided. DBM of 50 mm and since WMM has been adopted as base material, the same has to be provided with a thickness of 250 mm. As per above plate 150mm granular sub-base adequate. However, GFC have been approved for 180 mm based previous version of IRC 37-2012, same is retained. Subgrade will be 500 mm thickness.

1.5.6. DESIGN OF 17 M, 15.6 M, 12 M AND 9 M ROADS

Apart from 25 m roads, all the other roads are treated as low-volume since very less amount of traffic is anticipated on these roads and these are connected to higher volume roads following the hierarchy. These roads are designed for the traffic of 150 CVPD. Low volume roads are designed as per IRC: SP:62-2014. Pavement composition for the designed roads is PQC layer laid over WMM base and granular sub-base which rests over the subgrade. The top layer of the rigid pavement shall be designed as PQC layer with grade of concrete not less than M40.

1.5.6.1. DESIGN INPUTS

Since the road network of LPS falls in green-field and no existing traffic can be present, the pavement design has been carried out by assuming some of the design factors like traffic, MSA etc.

Inputs:

Design effective CBR: 7%

Design traffic: 150 CVPD

From the clause *3.5* and table-3.1 of IRC: SP: 62-2014, modulus of subgrade reaction for the effective CBR of 7% is 48 MPa/m. From the clause *3.6.3* of IRC: SP: 62-2014, the effective k values over granular and cementitious sub-bases for the thickness of 150 mm to 200 mm have been taken as 58 Mpa/m for granular sub base and 96 MPa/m for cementitious sub base. Since the roads are treated as low-volume, the design wheel load coming on the pavement is relatively lesser when compared to conventional pavements. A design wheel load of 50 kN has been adopted for the design. The pavement has been designed in such a way considering that the traffic is between 50 and 150 CVPD (Commercial Vehicles Per Day). Since the traffic considered is between 50 and 150 CVPD, the combined stresses due to 50 kN dual wheel load and

temperature gradient are to be calculated. Table-4.1 of IRC: SP: 62-2014 recommends the temperature differential for concrete slabs for all the states over the country. From the table, it has been observed that for the 150-mm slab thickness, temperature differential for Andhra Pradesh is 17.3 ^{0}C. For 200 mm thickness, the temperature differential is 19 ^{0}C and for 250 mm thickness, it is 20.3^{0}C.

A trial thickness of PQC 200 mm, WMM 100 mm, GSB 150 mm and sub-grade of 500 mm has been adopted for these roads.

Edge load stresses are computed for these roads with the inputs available and the same is compared with the 90-day modulus of rupture of concrete.

Equation 4.2 of IRC: SP: 62-2014 has been used to compute the load stress in the edge region.

$$\sigma_e = \frac{0.803P}{h^2}\left[4\log\left(\frac{l}{a}\right) + 0.666\left(\frac{a}{l}\right) - 0.034\right]$$

Edge load stress (MPa/m) has been computed using the following equation where P is the single wheel load (N), h is the slab thickness (mm), l is the radius of relative stiffness (mm) and a is the radius of equivalent circular area (mm).

Since this equation is valid only for the circular area, a slight modification has been observed with the formula. The radius of equivalent circular contact area has been computed using the below equation.

$$a = \sqrt{\frac{0.8521P_d}{p\pi} + \frac{S_d}{\pi}\left(\frac{P_d}{0.5227p}\right)^{\frac{1}{2}}}$$

This equation gives the curling stresses in which 't', the linear part of the temperature gradient, is 0.667 of the temperature differential given in the table-4.1 of IRC: SP: 62-2014 (19 ^{0}C in this case).

For the trail thickness of 200mm PQC, 100 mm WMM, 150 mm GSB and 500 mm of subgrade, the stresses computed are less than the 90-day modulus of rupture of concrete. Thus, the thicknesses adopted for all these roads can be adopted as safe for the design MSA and design effective CBR. Thus, the pavement design details of LPS roads are given in Table 1.5.2.

Table 1.5.1 Pavement types for different roads

TRoad type	Main Carriageway	Cycle track	Sidewalk
25 m ROW	Flexible	Premix carpet	Rigid (concrete tiles)
17 m ROW	Rigid – Pavement Quality Concrete (PQC)	Flexible	Rigid (concrete tiles)
15.6 m ROW	Rigid – Pavement Quality Concrete (PQC)	Flexible	Rigid (concrete tiles)
12 m ROW	Rigid – Pavement Quality Concrete (PQC)	-	Rigid (concrete tiles)

Table 1.5.2 Pavement Design Details for LPS Roads

Flexible pavement – 25 m RoW	Rigid pavement – 17 m, 15.6 m & 12 m RoW
BC – 30 mm	PQC – 200 mm
DBM – 50 mm	WMM – 100 mm
WMM – 250 mm	GSB – 150 mm
GSB – 180 mm	Subgrade – 500 mm
Subgrade – 500 mm	

1.6. STREET SCAPING COMPONENTS

1.6.1. PROVISION OF CYCLE TRACKS / NMT INFRASTRUCTURE

Good cycle tracks are continuous and provide for uninterrupted movement. They are physically separated from the main carriageway to ensure both comfort and safety, and are protected from encroachment by parked vehicles, pedestrians, and street vendors.

The cycle is a core mode of urban transport. Cycles offer low-cost, pollution-free mobility and occupy only a fifth as much driving and parking space as automobiles. Due to the lack of physical separation of motorized and non-motorized vehicles, cyclists face inconvenience and safety hazards from faster moving traffic. Therefore, the provision of safe and convenient infrastructure is essential to attract new users. Where motor vehicle lanes are saturated, cycling in a segregated track is often faster than using a private motor vehicle.

Efficient cycle tracks are safe, convenient, continuous, and direct. On streets with high-speed traffic, cycle tracks can reduce conflicts between cycles and motor vehicles.

1.6.1.1. SALIENT FEATURES OF CYCLE TRACKS

- A minimum width of 1.7 m for Two-way movement.
- Continuity to allow for reasonable speeds.
- Continuous shade through tree cover
- Elevation above the carriageway (e.g., +150 mm) that allows for storm water runoff.
- A buffer of 0.5 m between the cycle track and parking areas or the carriageway
- At property access points, the cycle track remains at the same level and vehicle access is provided by a ramp in the buffer.

Cycle track runs all along the carriageway and provides access to the plots. They are well connected with the public transport stations. Cycle track is designed with a composition of 20mm premix carpet, 75mm WMM, 150mm GSB and 300mm subgrade.

1.6.2. PROVISION OF SIDE WALKS / PEDESTRIAN WALKWAY

Good footpaths promote safe and comfortable pedestrian mobility. Together with other elements, such as furniture and landscaping, they constitute the primary public space of a city and are accessible to all users, regardless of age, gender, or special needs. Good footpaths are inviting spaces where people can meet, talk, sit, and eat. A significant proportion of trips, especially those below 2 km, are carried out on foot.

Comfort, continuity, and safety are the governing criteria for the design of pedestrian facilities. Footpaths should be provided on all streets, except on traffic calmed (12m & 9m) small streets.

Of all the roads, a minimum pedestrian sidewalk of 1.6 m is provided all along the carriageway.

1.6.2.1. SIDEWALKS ARE INCORPORATED WITH THE FOLLOWING FEATURES

- A continuous unobstructed minimum width of 1.6 m
- No breaks or obstructions at property entrances and side streets
- Continuous shade through tree cover
- No railings or barriers that prevent sideways movement on and off the footpath.

- Elevation over the carriageway (e.g., +150 mm) and adequate cross slope for storm water runoff. At the same time, the elevation should be low enough for pedestrians to step onto and off the footpath easily.

1.6.3. PROVISION OF PLANTATION STRIPS

Multi-Functional Zone has been proposed for the provision of landscaping along the roads. The MF zone has been provided with various components like tree grates, planter beds, street benches, street bins, streetlights etc.

Landscaping improves the livability of the streets. It plays a functional role in providing shade to pedestrians, cyclists and public transport passengers. It also enhances the aesthetic qualities of streets.

Effective greening with street trees reduces the street temperature, making it comfortable for people to walk even during summer afternoons. This is especially important in places with a humid climate or harsh daytime sun. On a larger scale, plants keep a city cool by reducing the urban heat island effect.

Trees also capture dust and remove glare. During storms, they reduce wind velocity. Additionally, trees can help reduce vehicle speeds by reducing the actual or the perceived width of a street. Landscaping can beautify a street, providing an umbrella canopy and adding colours, fragrances, and textures. The potentially varied character of flora along a street can make it a more memorable space. A well-designed landscape promotes a sense of ownership among nearby residents or shop owners such that they contribute towards its upkeep. Finally, landscaping can incorporate fruit bearing and medicinal or religious trees and shrubs.

Out of these, planter beds and tree gratings are proposed with varied spacings for varied RoW of roads. Details of each and every RoW road have been discussed in the report.

Street furniture in the MF zone is proposed in such a way that one tree grate is planned in between 2 planter beds. So, 1 tree grate and 2 planter beds make a combination of one unit of plantation strip. This plantation strip spacing varies for different RoW roads.

For 25 m RoW and 17 m RoW, planter beds are spaced at 2 m intervals. The dimension of the planter beds is given as 4 m * 1 m, where the length of the planter bed is 4 m and width 1 m.

Tree gratings are spaced at 15 m interval for 25 m roads, at 12 m interval for 17 m roads and at 10 m interval for 15.6 m, 12 m and 9 m roads.

Tree grates are designed in such a way that the maximum outer dimension is 0.45 m * 0.45 m for all roads except 9 m, whereas for 9 m it is designed as 0.36 m * 0.36 m.

Following list of suggested species proposed for Amaravati Project are mentioned below:

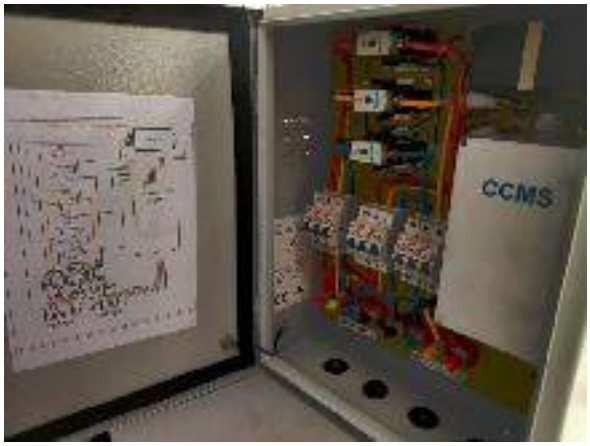
- Lawn and Lagerstroemia, Bignonia, Pagoda
- Hangfong red and Tecoma ghadichodi drawf/Plumeria Dwarf
- Tabebuia Avalanda and Almanda Dwarf Palms, Bottle brush
- Lawn, Datepalm and Neerium
- Golden Trumphet Tree and Podranea ricasoliana/Nerium petite salmon
- Cardia, Euphorbia milii
- Palms & Muria exotica/gulhinia
- Bignonia and Boginvillea.

AP Greening and Beautification Corporation may be contacted for finalising spices for each zone. The plant survival rate is poor in case plants borrowed from the local nurseries. Hence, it is suggested that nursery to be established in the vicinity of Zone.

1.6.4. SMART STREET LIGHTING WITH CENTRALIZED CONTROL AND MONITORING SYSTEM (CCMS)

Streetlights are provided after the plantation strip unit and the combination gets repeated all along the road. Streetlights are placed at 30 m spacing for 25 m roads. They are provided at 30 m spacing for 17 m roads, at 30 m spacing for 15.6 m roads, at 20 m spacing for 12 m.

Smart street lighting refers to a modern, energy-efficient system that uses advanced technologies such as sensors, wireless communication, and automation to manage and optimize street lighting in urban areas. Centralized Control and Monitoring System (CCMS) plays a key role in integrating and managing these smart streetlights, enabling municipalities to monitor, control, and optimize street lighting operations more efficiently. Components of Smart Street Lighting with CCMS



1. LED Street Lights: The core of a smart street lighting system is the use of energy-efficient LED lights. These lights consume significantly less power compared to traditional incandescent or fluorescent streetlamps. LEDs have longer lifespans, which reduces maintenance costs.
2. Sensors: Each streetlight is typically equipped with sensors, motion, and environmental conditions (such as temperature and humidity
3. Centralized Control and Monitoring System (CCMS): The CCMS is the heart of the smart street lighting infrastructure. It is a software platform that provides a centralized hub for managing and controlling the entire street lighting network. Key features of CCMS include:

- Real-time Monitoring: Allows operators to monitor the status of each feeder pillar,
- including power consumption, operational status, and faults.

- Remote Control: Enables operators to remotely turn them on/off based on various parameters such as time of day or traffic conditions.
- Fault Detection and Reporting: CCMS automatically detects faulty streetlights (e.g., outages, dimming, or malfunctions) and sends alerts to maintenance teams, reducing downtime and ensuring quick repairs.
- Data Analytics and Reporting: The system collects data on energy usage, operational performance, and other metrics, enabling data-driven decisions to optimize lighting and energy consumption.
- Predictive Maintenance: Using historical data and machine learning algorithms, the CCMS can predict potential failures before they happen, allowing for proactive maintenance.

4. Communication Networks: A reliable communication network is crucial for the operation of smart street lighting. This network allows all streetlights and sensors to send data to the CCMS in real-time. Common communication technologies used are

- 5G/4G Networks: Used for real-time high-speed data transfer in cities with advanced infrastructure.

1.6.5. PROVISION OF STREET FURNITURE

In addition to street lighting following items to be provisioned in the street scaping along proposed roads.

- Granite Benches at appropriate locations for short resting residents.
- Bollards at suitable locations to arrest the motorised vehicles.
- Suitable stone art gallery may be installed at intersections to make the proposed city more attractive.
- Water fountains can improve air quality by releasing negative ions into the air. These ions help purify the air, removing pollutants and allergens. It is suggested that water fountains to be installed at intersections locations. Reuse water to be used for these fountains.

- Protective mesh on bridges over Canal/Vagu locations to be provided to curb the garbage dumping in the water bodies.
- Guard rails shall be confined to junctions at the traffic islands to retain the landscape/plantation from animal menace.
- Rumble Strips/Speed Breakers shall be provided at locations demanding reduction of speeds which include approaches of important junctions, Highways.

1.6.6. TABLE TOP CROSSING

Raised tabletop crossings to be provided at slip roads with minimum 20 seconds signal to allow pedestrian and cyclists to cross the road safely and comfortably at same level.

Figure 1.6.1 Table Top Crossing

1.6.7. TRAFFIC SIGNS, ROAD MARKING and ROAD STUDS

TRAFFIC SIGNS:

Sign boards are provided all along the roads as per the provision given in IRC 67.

Informative sign boards of size 450x750 mm, Junction boards of size 1500x1050 mm, Route marker signs of 450x600 mm, Cautionary/warning sign boards of 600mm equilateral triangle, Mandatory/ Regulatory sign boards of size 600mm circle, stop sign of octagon size 600 mm, Mandatory (Give way sign Boards) of size 600 mm equilateral triangle are provided all along the project stretch.

ROAD MARKING:

Road Markings perform an important function of guiding and controlling traffic on a highway. The markings serve as a psychological barrier and thus help to signify the delineation of traffic path and its lateral clearance from traffic hazards facilitating safe movement. Further, the road markings channelize the pedestrians and cyclists movement into safe location and in effect, provide for an extension of the side walk/cycle track across the roadway. Road markings are therefore, indispensable to ensure smooth and orderly flow of traffic and for promoting road safety.

Notwithstanding some limitations, such as poor visibility when dusty or wet or obliteration by snow the frequent renewals of road markings have the advantage of conveying the required information to the road user without distracting the attention of the driver from the carriageway. Unlike road signs, the road markings are not likely to be obscured and are not pruned to vandalism.

While some markings are provided in conjunction with road signs, most markings are provided independently. Road markings normally include longitudinal markings, transverse markings, text and symbols etc. on the road surfaces.

ROAD STUDS:

Retroreflective road marking on pavement and cycle track shall be provided as per IRC SP 35.

Retro-reflective studs are used to supplement longitudinal/transverse reflectorized road markings, which would improve visibility in nighttime and adverse weather conditions. Road studs are also used across the carriageway to serve as Speed Arrestor coupled with eschewing warning through the creation of the rumbling sensation to the user. Series of such road reflector studs are to be laid in advance of junction/crossings/end of the flyover section wherein road crashes are prevalent.

The Clause 804 of 'Specification for Road and Bridge Works" by the Ministry of Road Transport & Highways (MORTH) and ASTM D4280-04 shall be referred for technical specifications of road studs.

The performance of road studs depends upon the amount of light from vehicle head lamps reflected back towards the source.

Installation of various types of road studs on pavement shall be as per IRC 35 and after approval from the Authority.

FLEXIBLE MEDIAN MARKER (FMM):

Flexible Median Marker (FMM) should be used for improving median visibility during dark hours. Use of Median Marker provides safety against collision happening with medians during nighttime or severe weather. Flexible Median Markers shall be provided with fluorescent yellow colour retro reflective sheeting Type XI as per IRC:67. Flexible Median Marker shall be of tough, high impact resistant, injection-moulded, thermoplastic body with property of flexibility to provide high durability and U shape structure having rebound/bounce back property. In addition to median, FMM shall be installed on vertical face of bridge parapet for better nighttime visibility.

FMM shall be installed in the median and bridge parapets as per IRC 79.

1.6.8. BRIDGES

Of the total LPS network, it has been observed that there are some locations where the roads are crossing some water bodies and are proposed as bridges. Since these bridges are observed in the vicinity of border of some of the zones, they are designated to be taken in either any of the zone. Thus, a total of 25 bridges have been observed among all the zones of LPS.

No Major bridges proposed in this zone for construction.

Notice Inviting Tender (NIT)

ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY

(APCRDA)

NIT No. NIT No. XX/XXXX/ Dated: DD.MM.YYYY

(Bidding Process with AP e-Procurement)

Department	ANDHRA PRADESH CAPITAL REGION DEVELOPMENT AUTHORITY (APCRDA)
Tender Number	NIT No. XX/XXXX/ Dated: DD.MM.YYYY
Tender Subject	**WORLD BANK & ADB financed Amaravati Capital City Development Program related [INSERT PROJECT NAME] on Lump sum contract (Percentage Tender).**
Financing Declaration	The Employer has received financing from the World Bank (WB) and Asian Development Bank (ADB) toward the Amaravati Integrated Urban Development Program (P507508) and Amaravati Inclusive and Sustainable Capital City Development Program (58395-001) respectively. A Part of this financing will be used for payments under the Contract named above and is within the Program Expenditure Framework.
Estimated Contract Value (ECV)	Rs. _____ Crores
Period of Completion of Work	__ Months
Period of Defect Liability Period (DLP)	__ Months from the date of completion of work.
Form of Contract	Lump Sum (Percentage Tender)
Tender Type	National Competitive Tender through AP E-procurement

	portal [*https://apeprocurement.gov.in*]
Eligible Class of Bidders and additional references	1. Special Class Civil registration in the Government contracts registered with Government of Andhra Pradesh 2. The valid Registrations being considered from the above are with reference to the applicable GO's, on the eligibility for participation in this tendering process
Category of Registration	Special Class with Government of Andhra Pradesh
Bid Validity	90 days from the date of Bid submission
Bid Security and Uploading of Documents	1. The Bidder has to submit the Bid Security amounting to **1% of the Estimated Contract Value (ECV)**. 2. The payment shall be made by way of NEFT/RTGS or by irrevocable bank guarantee/ Insurance Surety Bond with validity period of 180 days from the last date of bid submission from any Govt. Banks/ Nationalized Banks/ Public Sector Banks/ Scheduled banks in the prescribed format in favor of Andhra Pradesh Capital Region Development Authority (APCRDA) represented by its Commissioner: Name of the Bank–Union Bank of India, Account Number: 034310100081181 IFSC Code: UBIN0803430 Branch Address-Labbipet branch, Vijayawada, Andhra Pradesh – 520010. Beneficiary Name: Andhra Pradesh Capital Region Development Authority (APCRDA) 3. The bidder shall also upload the remittance details with proof for counter verification with the bank of the employer. 4. If any successful bidder fails to submit the original hard copies of Online Payment receipts/BG/ Insurance Surety Bond towards EMD/ Security Deposit within the stipulated time, the bid will be treated as invalid. 5. Besides this, the Department shall invoke all processes of law including criminal prosecution of such defaulting bidder as an act of extreme deterrence to avoid delays in the tender process for execution of the development schemes taken up by the Government. The information to this extent will

	be displayed on the e-procurement platform website. 6. The banker should be informed that the Bank Guarantee should not be revoked without official consent in writing of the Employer.
Transaction Fee:	@ 0.03% of ECV (estimated contract value) with a cap of Rs.10,000/- (Rupees ten thousand only) for all works with ECV upto Rs.50 crores, and Rs.25,000/- (Rupees twenty five thousand only) for works with ECV above Rs.50 crores plus applicable Taxes to be paid online at the time of bid submission electronically.
BID processing fee	Rs. _____ Online payment in favour of Andhra Pradesh Capital Region Development Authority (APCRDA), Vijayawada. (Non-refundable)

Tentative date of implementation	DD.MM.YYYY
Place of bid opening	O/o Commissioner, APCRDA, Lenin

	center, Governorpet,Vijayawada-520002.
Officer Inviting Bids	*The Commissioner, APCRDA, (Lenin Centre, Governor-pet, Vijayawada), Andhra Pradesh, through the Chief Engineer - infra, APCRDA, as the Tender Initiating Authority (TIA), representing the Governor of Andhra Pradesh*
Address	O/o Commissioner, APCRDA, Lenin Centre, Governorpet, Vijayawada-520002.
Contact Person until submission of bids	Chief Engineer _____, APCRDA << Add Mail ID of the concerned chief engineer >>
Point of Contact (POC) for procurement related grievances	Engineer-in-Charge, APCRDA mail: proc.complaints@apcrda.org
Note	The bidder has to upload the scanned copy of online transfer acknowledgment /Bank Guarantee/ Insurance Surety Bond along with the bid.

PART 1 – BIDDING PROCEDURES

Section I - Instructions to Bidders (ITB)

A. General

1. Scope of Bid	1.1.1. In connection with the Notice Inviting Tender (NIT)**, Bidding Document**, specified in the Bid Data Sheet (BDS), the Employer, as specified in the BDS, issues this Bidding document for the provision of Works as specified in Section VI: Works' Requirements**. The name, and NIT identification number of** this Bidding Document are specified in the **BDS**. 1.2. Throughout this bidding document: 1.2.1. the term **"in writing"** means communicated in written form (e.g. by mail, e-mail, fax, including, if specified **in the BDS**, distributed or received through electronic-procurement system used by the Employer) with proof of receipt; 1.2.2. if the context so requires, **"singular"** means **"plural'** and vice versa; 1.2.3. "**Bid**" means "Tender" and vice versa; 1.2.4. **"Day"** means calendar day, unless otherwise specified in **BDS** 1.2.5. the term "Employer", Tender Inviting Authority, and Department or Authority are used interchangeably;
2. Sources of Funds	2.1 The Borrower or Recipient (hereinafter called "Borrower") **specified in the BDS** has received financing (hereinafter called "funds") from the International Bank for Reconstruction and Development and Asian Development Bank (hereinafter called "the Banks") in an amount **specified in the BDS**, toward the project **named in the BDS**. The Borrower intends to apply a portion of the funds to eligible payments under the contract(s) for which this bidding document are issued. 2.2 Payment by the Bank will be subject, in all respects, to the terms and conditions of the Loan (or other financing) Agreement. No party other than the Borrower shall derive any rights from the Loan (or other financing) Agreement or have any claim to the proceeds of the Loan (or other financing).
3. Fraud and Corruption	3.1 The World Bank and ADB require compliance with their Anti-Corruption Guidelines and its prevailing sanctions policies and procedures as set forth in Section V. 3.2 In further pursuance of this policy, bidders shall permit and shall cause their agents (whether declared or not), subcontractors, sub-consultants, service providers,

	suppliers, and their personnel, to permit the World Bank and ADB to inspect all accounts, records and other documents relating to any initial selection process, prequalification process, bid submission, proposal submission, and contract performance (in the case of award), and to have them audited by auditors appointed by the Banks.
4. Eligible Bidders	4.1 A Bidder may be a firm that is a private entity, or a joint venture (JV), under an existing agreement, or with the intent to constitute a legally-enforceable joint venture, unless otherwise specified in the BDS. Bids submitted by a JV when permitted shall comply with the following requirements: a) The maximum number of members in the Joint Venture shall be as specified in the BDS; b) the bid shall include all the information listed in Bidders Qualification Forms for all the Members; c) the bid and, in case of a successful bid, the Agreement, shall be signed so as to be legally binding on all members; d) one of the members shall be nominated as being in charge, and this authorization shall be evidenced by submitting a power of attorney signed by legally authorized signatories of all the members; e) the member in charge shall be authorized to incur liabilities and receive instructions for and on behalf of any and all members of the joint venture and the entire execution of the contract, including payment, shall be done exclusively with the member in charge; f) all members of the joint venture shall be jointly and severally liable for the execution of the entire Contract in accordance with the Contract terms, and a statement to this effect shall be included in the authorization mentioned under (d) above, as well as in the bid and in the Agreement [in case of a successful bid]; g) the joint venture agreement should indicate precisely the role of all members of JV in respect of planning, design, construction equipment, key personnel, work execution, and financing of the project. All members of JV should have active participation in the execution during the currency of the contract. This should not be varied/ modified subsequently without prior approval of the Employer; and h) the joint venture agreement should be registered in the place specified in BDS so as to be legally valid and binding on members. 4.2 A Bidder shall not have a conflict of interest. Any Bidder found to have a conflict of interest shall be disqualified. A

	Bidder may be considered to have a conflict of interest for the purpose of this Bidding process, if the Bidder: a) directly or indirectly controls, is controlled by or is under common control with another Bidder; or b) receives or has received any direct or indirect subsidy from another Bidder; or c) has the same legal representative as another Bidder; or d) has a relationship with another Bidder, directly or through common third parties, that puts it in a position to influence the Bid of another Bidder, or influence the decisions of the Employer regarding this Bidding process; or e) or any of its affiliates participated as a consultant in the preparation of the design or technical specifications of the works that are the subject of the Bid; or f) or any of its affiliates has been hired (or is proposed to be hired) by the Employer or Borrower as Engineer for the Contract implementation; or g) would be providing goods, works, or non-consulting services resulting from or directly related to consulting services for the preparation or implementation of the project specified in the BDS ITB 1.1 that it provided or were provided by any affiliate that directly or indirectly controls, is controlled by, or is under common control with that firm; or h) has a close business or family relationship with a professional staff of the Borrower (or of the project implementing agency, or of a recipient of a part of the loan) who: (i) are directly or indirectly involved in the preparation of the Bidding document or specifications of the Contract, and/or the Bid evaluation process of such Contract; or (ii) would be involved in the implementation or supervision of such Contract unless the conflict stemming from such relationship has been resolved in a manner acceptable to the Bank throughout the Bidding process and execution of the Contract. 4.3 A firm that is a Bidder (either individually or as a JV member) shall not participate in more than one Bid. This includes participation as a subcontractor in other Bids. Such participation shall result in the disqualification of all Bids in which the firm is involved. A firm that is not a bidder or a JV member may participate as a subcontractor in more than one bid. 4.4 A Bidder may have the nationality of any country, subject to the restrictions pursuant to ITB 4.8. A Bidder shall be deemed to have the nationality of a country if the Bidder is

	constituted, incorporated or registered in and operates in conformity with the provisions of the laws of that country, as evidenced by its articles of incorporation (or equivalent documents of constitution or association) and its registration documents, as the case may be. This criterion also shall apply to the determination of the nationality of proposed subcontractors or sub-consultants for any part of the Contract including related Services. 4.5 A Bidder that has been sanctioned by the Bank, pursuant to the Bank's Anti-Corruption Guidelines, in accordance with its prevailing sanctions policies and procedures as set forth in the WBG's Sanctions Framework as described in Section V paragraph 2.2 d., shall be ineligible to be prequalified for, initially selected for, bid for, propose for, or be awarded a Bank-financed contract or benefit from a Bank-financed contract, financially or otherwise, during such period of time as the Bank shall have determined. The list of debarred firms and individuals is available at the electronic address specified in the BDS. 4.6 DELETED 4.7 A Bidder shall not be under suspension from Bidding by the Employer as the result of the operation of a Bid–Securing or Proposal-Securing Declaration. 4.8 Firms and individuals may be ineligible if so indicated in Section V and (a) as a matter of law or official regulations, the Borrower's country prohibits commercial relations with that country, provided that the Bank is satisfied that such exclusion does not preclude effective competition for the supply of goods or the contracting of works or services required; or (b) by an act of compliance with a decision of the United Nations Security Council taken under Chapter VII of the Charter of the United Nations, the Borrower's country prohibits any import of goods or contracting of works or services from that country, or any payments to any country, person, or entity in that country. When the Works are implemented across jurisdictional boundaries (and more than one country is a Borrower, and is involved in the procurement), then exclusion of a firm or individual on the basis of ITB 4.8 (a) above by any country may be applied to that procurement across other countries involved, if the Bank and the Borrowers involved in the procurement agree. 4.9 A Bidder shall provide such documentary evidence of eligibility satisfactory to the Employer, as the Employer shall reasonably request.
5. Eligible Materials, Equipment, and	5.1 The materials, equipment and services to be supplied under the Contract may have their origin in any country subject to the restrictions in the Employer's country. At the

Services	Employer's request, Bidders may be required to provide evidence of the origin of materials, equipment and services.
B. Contents of Bidding Document	
6. Sections of Bidding Document	6.1 The Bidding document consists of Part I, II, and III, which includes all the sections specified below, and which should be read in conjunction with any Addenda issued in accordance with ITB 8. **PART I: Bidding Procedures** - Section I - Instructions to Bidders (ITB) - Section II - Bid Data Sheet (BDS) - Section III - Evaluation and Qualification Criteria - Section IV - Bidding Forms - Section V - Fraud and Corruption **PART II: Works Requirements** - Section VI - Works' Requirements **PART III: Conditions of Contract and Contract Forms** - Section VII - General Conditions of Contract (GCC) - Section VIII – Particular Conditions of Contract (PCC) - Section IX - Contract Forms 6.2 The Notice Inviting Tender issued by the employer shall be considered to be a part of the Bidding Documents. 6.3 Unless obtained directly from the **AP eProcurement portal as mentioned in the BDS**, the Employer is not responsible for the completeness of the Bidding Documents, responses to requests for clarification, the minutes of the Pre-Bid meeting (if any), or Addenda to the Bidding Documents in accordance with ITB 8. In case of any contradiction, documents obtained directly from the Employer shall prevail. 6.4 The Bidder is expected to examine all instructions, forms, terms, and specifications in the Bidding Documents and to furnish with its bid all information and documentation as is required by the Bidding Documents.
7. Clarification of Bidding Document, Site Visit, Pre-Bid Meeting	7.1 A Bidder requiring any clarification of the Bidding document shall contact the Employer in writing at the Employer's address specified **in the BDS** or raise its enquiries during the pre-Bid meeting if provided for in accordance with ITB 7.4. The Employer will respond in writing to any request for clarification. The Employer shall promptly publish its response on the AP e-procurement portal. Should the clarification result in changes to the essential elements of the Bidding document, the Employer

	shall amend the Bidding document following the procedure under ITB 8 and ITB 22.2. 7.2 The Bidder is advised to visit and examine the Site of Works and its surroundings and obtain for itself, on its own responsibility, all information that may be necessary for preparing the Bid and entering into a contract for construction of the Works. The costs of visiting the Site shall be at the Bidder's own expense. 7.3 The Bidder and any of its personnel or agents will be granted permission by the Employer to enter upon its premises and lands for the purpose of such visit, but only upon the express condition that the Bidder, its personnel, and agents will release and indemnify the Employer and its personnel and agents from and against all liability in respect thereof, and will be responsible for death or personal injury, loss of or damage to property, and any other loss, damage, costs, and expenses incurred as a result of the inspection. 7.4 If so specified **in the BDS**, the Bidder's designated representative is invited to attend a pre-Bid meeting and/or a Site of Works visit. The purpose of the meeting will be to clarify issues and to answer questions on any matter that may be raised at that stage. 7.5 Submission of a bid by a bidder implies that the bidder has read this notice and all other contract documents and has made himself aware of the scope and specifications of the work to be done and of conditions and rates at which stores, tools and plant, etc. will be issued to them by the Government and local conditions and other factors having a bearing on the execution of the work. 7.6 Canvassing whether directly or indirectly, in connection with bidders is strictly prohibited and the bids submitted by the contractors who resort to canvassing will be liable for rejection.
8. Amendment of Bidding Document	8.1 At any time prior to the deadline for submission of bids, the Employer may amend the Bidding Documents by issuing corrigenda/addenda. 8.2 Any corrigendum/ addendum issued shall be part of the Bidding Documents and shall be deemed to have been communicated to all bidders. The Employer shall also promptly publish the addendum on the Employer's eProcurement portal as specified in **ITB 6.3** and in accordance with **ITB 7.1**. 8.3 To give Bidders reasonable time in which to take an addendum into account in preparing their bids, the Employer at its own discretion may extend the deadline for the submission of bids, pursuant to **ITB 22.2**
C. Preparation of Bids	

9. Cost of Bidding	9.1 The Bidder shall bear all costs associated with the preparation and submission of its Bid, and the Employer shall not be responsible or liable for those costs, regardless of the conduct or outcome of the Bidding process.
10. Language of Bid	10.1 The Bid, as well as all correspondence and documents relating to the bid exchanged by the Bidder and the Employer, shall be written in the language specified in the **BDS**. Supporting documents and printed literature that are part of the Bid may be in another language provided they are accompanied by an accurate translation of the relevant passages in the language specified in the **BDS**, in which case, for purposes of interpretation of the Bid, such translation shall govern.
11. Documents Comprising the Bid	The Bid shall comprise two Parts, namely the Technical Part and the Financial Part. These two Parts shall be submitted simultaneously. 11.1 The Technical Bid shall comprise the following: a) Letter of Bid and Appendix to Bid, in accordance with ITB 12; b) Form 1 - Bidder information form c) Form 2 - Historical Contract Non-Performance, Pending Litigation and Litigation History d) Completed schedules (Statement I to X) as required, including priced Bill of Quantities, in accordance with ITB 12 and 14; e) Bid security in accordance with ITB 19.1; f) Written confirmation authorizing signatory of the Bid to commit the Bidder, in accordance with ITB 20.1; g) Documentary evidence in accordance with ITB 17 establishing the Bidder's continued qualified status or, if post-qualification applies, as specified in accordance with ITB 4, the bidder's qualifications to perform the contract if its Bid is accepted; h) Technical Proposal in accordance with ITB 16; i) Any other document required in BDS. 11.2 The Financial Part shall contain the following: a) Price Bid : prepared in accordance with ITB 14; and any other document required in the BDS. (Scanned copy of the filled Price Bid form to be uploaded while quoting the percentage quote at the e-procurement portal) 11.3 The Technical Part shall not include any information related to the Bid price. Where material financial information related

	to the Bid price is contained in the Technical Part the Bid shall be declared non-responsive.
12. Letter of Bid and Schedules	12.1 The Letter of Bid and other documents, shall be prepared using the relevant forms furnished in Section IV Bidding Forms. The forms must be completed without any alterations to the text, and no substitutes shall be accepted except as provided under ITB 20.2. All blank spaces shall be filled in with the information requested.
13. Alternative Bids	NOT ALLOWED
14. Bid Prices and Discounts	14.1 The prices and discounts (including any price reduction) quoted by the Bidder in the Letter of Bid and in the Bill of Quantities shall conform to the requirements specified below. 14.2 **Bill of Quantities** for the works are annexed at **Schedule – A** and the bid offer accompanies the tender document as **Part II: Works' requirements**. It shall be explicitly understood that with regard to the correctness or completeness of this **Part II: Works' requirements** which is liable to alterations by omissions, deductions or additions at the discretion of the Engineer-in-charge or as set forth in the conditions of the contract. The **Schedule - A** shall contain the items of work indicated as part – A and provisions as part –B. a) The percentage excess/less rates/at-par quoted by the bidder shall be applicable only to part –A. However, the provisions contained in the part –B will be operated basing on the conditions provided in the bid Document. The bidders will have to state clearly their willingness to execute the work at certain specific percentage of excess or less or at par of the ECV indicated in Part-A at the space provided therein in Schedule 'A'. The bidder should, however, quote their lump-sum tender based on this schedule of quantities. The bidder should quote their offer as an overall tender percentage. The overall tender percentage should be written both in words and figures in the price bid document uploaded to the e-procurement portal. The bid offers i.e., percentage shall be written both in figures and words legibly and free from erasures, over writings or corrections of figures. Corrections where unavoidable should be made by crossing out and rewriting duly initializing with date. b) The Schedule –A (or Price-bid) contains not only the quantities but also the rates worked out by the employer and the amount for each item and total value of the estimated contract. The bidder should workout their own rates keeping in view the work, site conditions and quote their overall tender percentage with which the bidder

	intends to execute the work. 14.3 The price to be quoted in the Letter of Bid, in accordance with ITB 12.1, shall be the total price of the Bid, excluding any discounts offered (if relevant). 14.4 The Bidder shall quote any discounts and the methodology for their application in the Letter of Bid, in accordance with ITB 12.1. 14.5 Unless otherwise **specified in the BDS** and the Contract, the price quoted by the bidder are subject to adjustment during the performance of the contract in accordance with the provisions of the Conditions of Contract. 14.6 All duties, taxes, and other levies payable by the bidder as per State / Central Government rules, shall be excluded in the tender percentage quoted by the Bidder, keeping in view the reimbursable amounts specified in Part-B of Price bid. 14.7 DELETED 14.8 Tenders which are less beyond minus 25% (<-25%) of the ECV (Estimate Contract Value), a bank guarantee/ demand draft/ Insurance Surety Bond for the difference between the tendered amount and 75% of estimate contract value should be taken over and above other guarantee, which would be released after the completion of work along with other bank guarantee.
15. Currencies of Bid and Payment	15.1 The currency of the bid and the currency of payments shall be **Indian Rupees**
16. Documents Comprising the Technical Proposal	16.1 The Bidder shall furnish a Technical Proposal as **specified in BDS** including a statement of work methods, equipment, personnel, schedule and any other information as stipulated in Section IV – Bidding Form, in sufficient detail to demonstrate the adequacy of the Bidder's proposal to meet the work requirements and the completion time.
17. Documents Establishing the Qualifications of the Bidder	17.1 To demonstrate that the bidder meets the Qualification requirement as mentioned in **Notice Inviting Tender** & **Section III: Evaluation and Qualification Criteria**, the bidder shall provide in the information using the forms provided in **Section IV: Bidding Forms**. 17.2 DELETED 17.3 Any change in the structure or formation of a Bidder after being prequalified and invited to Bid shall be subject to the written approval of the employer prior to the deadline for submission of Bids. Such approval shall be denied if (i) a Bidder proposes to associate with a disqualified Bidder or in case of a disqualified joint venture, any of its members; (ii) as a consequence of the change, the Bidder no longer

	substantially meets the qualification criteria set forth in Section III, Qualification Criteria and Requirements; or (iii) in the opinion of the employer, the change may result in a substantial reduction in competition. Any such change should be submitted to the employer not later than fourteen (14) days after the date of the Invitation for Bids.
18. Period of Validity of Bids	18.1 Bids shall remain valid for the period **specified in the BDS** after the bid submission deadline date prescribed by the Employer in accordance with **ITB 22.1.** A bid valid for a shorter period shall be rejected by the Employer as non-responsive. 18.2 In exceptional circumstances, prior to the expiration of the bid validity period, the employer may request Bidders to extend the period of validity of their bids. The request and the responses shall be made in writing. If a bid security is requested in accordance with ITB 19, it shall also be extended for twenty (20) days beyond the deadline of the extended validity period. A Bidder may refuse the request without forfeiting its bid security. A Bidder granting the request shall not be required or permitted to modify its bid.
19. Bid Security	19.1 The Bidder shall furnish, as part of its Bid, a Bid Security as specified **in the BDS**, in the amount and currency specified **in the BDS.** 19.2 If a bid security is specified pursuant to ITB 19.1, the bid security shall be a demand guarantee in any of the following forms at the Bidder's option: a) Online through E-Procurement portal b) an unconditional irrevocable guarantee issued by a bank (National or Scheduled Bank) or financial institution; c) Insurance Surety Bond 19.3 In the case of a bank guarantee/ Insurance Surety Bond, the bid security shall be submitted either using the Bid Security Form included in **Section IV, Bidding Forms**, or in another substantially similar format approved by the employer prior to bid submission. The bid security shall be valid for 180 days from the last date prescribed for submission of tenders, or beyond any period of extension if requested under ITB 18.2. Any deviation in Bid Security with regard to amount, validity and format shall be considered as material deviation and bid shall be summarily rejected. 19.4 If a bid security is specified pursuant to ITB 19.1, any bid not accompanied by a substantially responsive bid security shall be rejected by the Employer as non-responsive. 19.5 If a bid security is specified pursuant to ITB 19.1, the bid security of unsuccessful Bidders shall be returned as

	promptly as possible upon the successful Bidder's signing the Contract and furnishing the performance security pursuant to **ITB 41** & **ITB 42**. 19.6 The bid security of the successful Bidder shall be returned as promptly as possible once the successful Bidder has signed the Contract and furnished the required performance security Pursuant to **ITB 42**. 19.7 The bid security may be forfeited: a) If a Bidder withdraws/modifies/substitutes its bid during the period of bid validity specified by the Bidder on the Letter of Bid, or any extension thereto provided by the Bidder; or b) If the successful Bidder fails to: (i) Sign the Contract in accordance with ITB 41; or (ii) Furnish a performance security, the Environmental and Social (ES) Performance Security, in accordance with ITB 42. c) In case of any false information/document submitted by bidder; d) Failure on part of successful bidder to submit the original hard copies of all uploaded documents, within the time period specified by the employer. e) In case there is mismatch / variation between the original copies of certificates submitted and the scanned copy of certificates uploaded at the time of tender submission
20. Format and Signing of Bid	20.1 The Bidder shall prepare the Bid as per details given in ITB 21. 20.2 Bidders shall mark as "CONFIDENTIAL" information in their Bids which is confidential to their business 20.3 The Bid shall be signed by a person duly authorized to sign onbehalf of the Bidder. This authorization shall consist of a written confirmation as specified in the BDS and shall be uploaded along with the Bid. 20.4 In case the Bidder is a JV, the Bid shall be signed by an authorized representative of the JV on behalf of the JV, and so as to be legally binding on all the members as evidenced by a power of attorney signed by their legally authorized representatives. Documents establishing authority to sign the bid on behalf of the JV shall be uploaded along with the bid.
D. Submission and Opening of Bids	
21. Submission of bids	21.1 Bids must be submitted electronically using the system specified **in the BDS**. Bidders shall follow the electronic Bid submission procedures specified **in the BDS** 21.2 After submission of bid online, the bidders shall submit

	the originals hard copies of uploaded Bid Security to the Authority within the period as specified in the **BDS** either personally or through courier or by post within the due date. The employer shall not take any responsibility for any delay or non-receipt. If any of the documents furnished by the bidder is found to be false/fabricated/bogus, the bidder is liable for blacklisting, forfeiture of the Bid Security (EMD), cancellation of work and criminal prosecution. 21.3 The bidder is requested to get a confirmed acknowledgement from the Employer as a proof of the Hardcopies submission of EMD to avoid any discrepancy. The bidder has to attach the required documents after uploading the same as required by Tender Inviting Authority in its tender conditions.
22. Deadline for Submission of Bids	22.1 **When so specified in the BDS**, bidders have to submit their bids electronically. Bidders submitting bids electronically shall follow the electronic bid submission procedures **specified in the BDS**. Bids must submit their bid online (electronically) no later than the date and time specified in the BDS & NIT. 22.2 The employer may, at its discretion, extend the deadline for the submission of bids by amending the Bidding Documents in accordance with ITB 8, in which case all rights and obligations of the employer and Bidders previously subject to the deadline shall thereafter be subject to the deadline as extended.
23. Late Bids	23.1 Submission of Tenders shall be closed on e-procurement portal indicated in **BDS** at the date & time of submission prescribed in **NIT & BDS** after which no tender shall be accepted. It shall be the responsibility of the bidder to ensure that their bid is submitted online on the e-procurement portal before the deadline of submission. Employer will not be responsible for non-receipt of tender documents due to any delay and/or loss etc.
24. Withdrawal, Substitution, and Modification of Bids	24.1 Bidders may modify their bids by using the appropriate option for bid modification on e-procurement portal, before the deadline for submission of bids. For this the bidder need not make any additional payment towards the cost of bid document. For bid modification and consequential re-submission, the bidder is not required to withdraw their bid submitted earlier. The last modified bid submitted by the bidder within the bid submission time shall be considered as the bid. For this purpose, modification/withdrawal by other means will not be accepted. In online system of bid submission, the modification and consequential re-submission of bids is allowed any number of times. A bidder may withdraw their bid by using the appropriate

	option for bid withdrawal, before the deadline for submission of bids, however, if the bid is withdrawn, re-submission of the bid is not allowed (or allowed if specified in BDS). 24.2 No bid may be withdrawn, substituted, or modified in the interval between the deadline for submission of bids and the expiration of the period of bid validity specified by the Bidder on the Letter of Bid or any extension thereof.
25. Bid Opening	25.1 Except in the cases specified in ITB 22, electronic bid opening procedures required if electronic bidding is permitted in accordance with **ITB 21.1**, shall be as specified in the **BDS**. 25.2 The Technical Bids of all bidders who have submitted a valid tender security and cost of tender document shall be opened in the presence of representatives of bidders who choose to attend on date & time as mentioned in **NIT** and **BDS** in the office of the employer. Bidders may visit e-procurement portal to know latest Technical Opening information after completion of opening process. If such nominated date for opening of Tender is subsequently declared as a Public Holiday by the employer, the next official working day shall be deemed as the date of opening of Technical bid. The bid of any bidder who has not complied with one or more of the foregoing instructions may not be considered. 25.3 A date, time and venue will be notified to those technically successful Bidders for opening of their Price Bids in the official website of the employer. The opening of Price Bids shall be done in presence of respective representatives of those technically successful Bidders who choose to be present. The employer will not entertain any query or clarification from Bidders who fail to qualify at any stage of the Selection Process.
E. Evaluation and Comparison of Bids	
26. Confidentiality	26.1 Information relating to the evaluation of bids and recommendation of contract award shall not be disclosed to Bidders or any other persons not officially concerned with the bidding process until information on Contract award is communicated to all Bidders in accordance with **ITB 40.** 26.2 Any attempt by a Bidder to influence the employer in the evaluation of the bids or Contract award decisions may result in the rejection of its bid. 26.3 Notwithstanding ITB 26.2, from the time of bid opening to the time of Contract award, if a Bidder wishes to contact the employer on any matter related to the bidding process,

	it shall do so in writing.
27. Clarification of Bids	27.1 To assist in the examination, evaluation, and comparison of the bids, and qualification of the Bidders, the employer may, at its discretion, ask any Bidder for a clarification of its bid, given a reasonable time for a response. Any clarification submitted by a Bidder that is not in response to a request by the employer shall not be considered. The employer's request for clarification and the response shall be in writing. No change, including any voluntary increase or decrease, in the prices or substance of the bid shall be sought, offered, or permitted, except to confirm the correction of arithmetic errors discovered by the employer in the evaluation of the bids, in accordance with ITB 31. 27.2 If a Bidder does not provide clarifications of its bid by the date and time set in the employer's request for clarification, its bid may be rejected.
28. Deviations, Reservations, and Omissions	28.1 During the evaluation of Bids, the following definitions apply: a) "Deviation" is a departure from the requirements specified in the Bidding document; b) "Reservation" is the setting of limiting conditions or withholding from complete acceptance of the requirements specified in the Bidding document; and c) "Omission" is the failure to submit part or all of the information or documentation required in the Bidding document.
29. Determination of Responsiveness	29.1 The Employer's determination of a Bid's responsiveness is to be based on the contents of the Bid itself, as defined in ITB 12 29.2 A substantially responsive bid is one that meets the requirements of the Bidding Documents without material deviation, reservation, or omission. A material deviation, reservation, or omission is one that, If accepted, would: i. Affect in any substantial way the scope, quality, or performance of the Works specified in the Contract; or ii. Limit in any substantial way, inconsistent with the Bidding Documents, the employer's rights or the Bidder's obligations under the proposed Contract; or iii. If rectified, would unfairly affect the competitive position of other Bidders presenting substantially responsive bids. 29.3 The employer shall examine the technical aspects of the bid submitted in accordance with ITB 17. 29.4 If a Bid is not substantially responsive to the requirements of the Bidding document, it shall be rejected by the Employer and may not subsequently be made responsive

	by correction of the material deviation, reservation, or omission.
30. Nonmaterial Nonconformities	30.1 Provided that a Bid is substantially responsive, the Employer may waive any nonconformities in the Bid which do not constitute a material deviation, reservation or omission. 30.2 Provided that a Bid is substantially responsive, the Employer may request that the Bidder submit the necessary information or documentation, within a reasonable period of time, to rectify nonmaterial nonconformities in the Bid related to documentation requirements. Requesting information or documentation on such nonconformities shall not be related to any aspect of the price or substance of the Bid. Failure of the Bidder to comply with the request may result in the rejection of its Bid. 30.3 Provided that a Bid is substantially responsive, the Employer shall rectify quantifiable nonmaterial nonconformities related to the Bid Price. To this effect, the Bid Price shall be adjusted, for comparison purposes only, to reflect the price of a missing or nonconforming item or component in the manner specified in the BDS.
31. Correction of Arithmetical Errors	31.1 The e-procurement system automatically calculates the total amount from unit rates and quantities and the system also automatically populates the amount in words from the amount in figures and therefore there is no scope of discrepancy and need for arithmetic correction.
32. Conversion to Single Currency	32.1 For evaluation and comparison purposes, the currency(ies) of the Bid shall be converted into Indian Rupees Only.
33. Margin of Preference	33.1 **DELETED**
34. Subcontractors	34.1 Unless otherwise stated in the BDS, the Employer does not intend to execute any specific elements of the Works by subcontractors selected in advance by the Employer. 34.2 The subcontractor's qualifications shall not be used by the Bidder to qualify for the Works unless their specialized parts of the Works were previously designated by the Employer in the BDS as can be met by subcontractors referred to hereafter as 'Specialized Subcontractors', in which case, the qualifications of the Specialized Subcontractors proposed by the Bidder may be added to the qualifications. 34.3 Bidders may propose subcontracting up to the percentage of total value of contracts or the volume of works as specified in the BDS. Subcontractors proposed by the Bidder shall be fully qualified for their parts of the Works.

35. Evaluation of Bids	35.1 The employer shall use the criteria and methodologies listed in this Clause. No other evaluation criteria or methodologies shall be permitted. 35.2 To evaluate a price bid, the employer shall consider the following: a) The bid price b) price adjustment due to discounts offered in accordance with ITB c) The additional evaluation factors as specified in Section III, Evaluation and Qualification Criteria; 35.3 The estimated effect of the price adjustment provisions of the Conditions of Contract, applied over the period of execution of the Contract, shall not be taken into account in bid evaluation. 35.4 If the bid, which results in the lowest Evaluated Bid Price, is seriously unbalanced or front loaded in the opinion of the employer, the employer may require the Bidder to produce detailed price analyses for any or all items of the Bill of Quantities, to demonstrate the internal consistency of those prices with the construction methods and schedule proposed. After evaluation of the price analyses, taking into consideration the schedule of estimated Contract payments, the employer may require that the amount of the performance security be increased at the expense of the Bidder to a level sufficient to protect the employer against financial loss in the event of default of the successful Bidder under the Contract.
36. Comparison of Bids	36.1 The Employer shall compare the evaluated costs of all substantially responsive Bids established in accordance with ITB 35.2 to determine the Bid that has the lowest evaluated cost
37. Qualification of the Bidder	37.1 The employer shall determine to its satisfaction whether the Bidder that is selected as having submitted the lowest evaluated and substantially responsive bid either continues to meet (if prequalification applies) or meets (if post qualification applies) the qualifying criteria specified in Section III, Evaluation and Qualification Criteria. 37.2 The determination shall be based upon an examination of the documentary evidence of the Bidder's qualifications submitted by the Bidder, pursuant to ITB 17.1. 37.3 An affirmative determination shall be a prerequisite for award of the Contract to the Bidder. A negative determination shall result in disqualification of the bid.
38. Employer's Right to Accept Any	38.1 The employer reserves the right to accept or reject any bid, and to annul the bidding process and reject all bids at any

Bid, and to reject any or All Bids		time prior to contract award, without thereby incurring any liability to Bidders. In case of annulment, all bids submitted and specifically, bid securities, shall be promptly returned to the Bidders.
F. Award of Contract		
39. Award Criteria	39.1	Subject to ITB 38.1, the employer shall award the Contract to the Bidder who has been determined to be the lowest evaluated bid and is substantially responsive to the Bidding Documents, provided further that the Bidder is determined to be qualified to perform the Contract satisfactorily.
40. Notification of Award	40.1	Prior to the date of expiry of the bid validity, the Employer shall notify the successful Bidder, in writing, that its Bid has been accepted. The notification of award (hereinafter and in the Conditions of Contract and Contract Forms called the "Letter of Acceptance") shall specify the sum that the Employer will pay the Contractor in consideration of the execution of the Contract (hereinafter and in the Conditions of Contract and Contract Forms called "the Contract Price"). 40.2 Until a formal contract is prepared and executed, the notification of award shall constitute a binding Contract.
41. Signing of Contract	41.1	The Employer shall send to the successful Bidder the Letter of Acceptance including the Contract Agreement 41.2 The successful Bidder shall sign, date and return to the Employer, the Contract Agreement within Fourteen (14) days of its receipt. 41.3 If the Successful bidder fails to sign the Contract Agreement, the contract Registration will be suspended for a period of One year duly forfeiting the Bid Security as per G.O.Ms.No.259, T.R&B (Roads-V) Dept., and dt.6.9.2008.
42. Performance Security	42.1	The successful Bidder shall, for the performance of its obligations hereunder during the Construction Period, furnish the Performance Security for an amount equal to 2.5 per cent of the bid amount/contract value in the shape of unconditional and irrevocable Bank Guarantee/ Insurance Surety Bond valid until 60 days after the completion of DLP period. 42.2 Failure of the successful Bidder to submit the above-mentioned Performance Security or sign the Contract shall constitute sufficient grounds for the annulment of the award and forfeiture of the Bid Security.
43. Procurement related complaints	-	The point of contact and procedure for procurement related complaints are specified in the **BDS**

Section II - Bid Data Sheet (BDS)

A. General

ITB 1.1	**NIT No: XX/2024** **Name of the Work: WORLD BANK & ADB financed Amaravati Capital City Development Program related [INSERT PROJECT NAME] on Lump sum contract (Percentage Tender).**

E. Evaluation and Comparison of Bids	
ITB 30	Non- Material & Non-Conformities **shall not be** permitted
ITB 34	- The total value of works to be awarded on sub-contracting shall not exceed *[insert work-specific required percentage, not exceeding 50%]* of the contract value. - There is no right for the bidder to sub-contract any part of the contract works without the employer's permission. If the bidders desires to sub-contract any part of the work during execution, the bidder shall submit in writing the necessity of sub-contracting of any part of the contract work, subject to the ceiling of *[insert work-specific required percentage, not exceeding 50%]* in all, along with the name of the proposed Sub-Contractor, details of qualification, experience and valid registration and as to the proposed Sub-Contractor gets eligibility from suitable class for such sub-contract work and that the contractor has verified and found genuine-ness of the proposed sub-contractors information. - The Tender Accepting Authority before awarding of works on sub-contracting (subject to total sub-contracting of not more than *[insert work-specific required percentage, not*

	exceeding 50%] of the contract value either to one or more sub-contractors) shall verify the genuineness of the proposed Sub-Contractor`s qualification and other eligibility criteria. - If the Sub-Contractor satisfies the qualification and other eligibility criteria with reference to the criteria of prime contractor in proportion to the value of work proposed to be sub-contracted, the bidder may seek approval from the Concerned Technical Committee. - After approval by the Technical Committee for any such Sub-Contracting, the Tender Accepting Authority can permit such Sub-Contracting within the ceilings. - The extent of sub-contract shall be added to the experience of the sub-contractor and to that extent deducted from that of the main contractor while issuing the experience certificate. - It is the responsibility of the main contractor to clear any liabilities that may arise from the portion of the work executed by the sub-contractor until the completion of the contract work, the end of the defect liability period, and the end of any operation and maintenance period, if any, specified in the contract.
ITB 35.1	Evaluation of Technical Bid: i. All the bids will be verified to check if each bid is accompanied by a valid bid security in the required amount and in an acceptable form. Bids that are not accompanied by the valid tender security shall be rejected and will not be evaluated further. ii. APCRDA will determine whether each bid is responsive to the requirements of the Bid Documents i.e. to check the bid if it conforms to all terms, conditions and specifications of the bid document. In case of any inconformity, the tender shall be disqualified and rejected. The decision ofAPCRDA as to which tenders are not substantially responsive shall be final. iii. Tenders having any material deviation or reservation as detailed in ITB 28 and 29 shall be disqualified and rejected. **Technical Evaluation** – This evaluation will be done to check the adequacy of Bidders' Technical capability and will include an assessment of the Bidder's past work experience in executing similar nature of works, their financial strength and technical capacity to mobilize key equipment and personnel for the contract along with adequacy of Technical Proposal. The Evaluation of Technical Proposal shall be carried out as per the methodology given in Section III: Evaluation Criteria. To become eligible for shortlisting for opening of Price Bid, the Bidder must meet the pre-qualification requirement stated in the Tender Documents.
ITB 42.1 (a)	The successful Bidder shall also, for the performance of its E&S obligations hereunder during the Construction Period, furnish the

	E&S Performance Security for an amount equal to 0.1 per cent of the bid amount/contract value in the shape of unconditional and irrevocable Bank Guarantee/ Insurance Surety Bond valid until 60 days after the completion of DLP period. The E&S Performance Security shall be over and above the Performance Security mentioned under ITB 42.1.
ITB 43	If a Bidder wishes to make a Procurement-related Complaint/ Appeal, the Bidder shall submit its complaint following these procedures, In Writing (by the quickest means available, such as by email or fax), Procurement Related Grievances For the attention: Additional Commissioner (Admin) Employer: APCRDA Email address: proc.complaints@apcrda.org *[https://crda.ap.gov.in/]* (b) In summary, a Procurement-related Complaint/ Appeal may challenge any of the following : 1. the terms of this Tender / Request for Proposal; 2. the Employer's decision to exclude a Bidder / Consultant from the procurement process prior to the award of contract; and 3. the Employer's decision to award the contract. Appellate Authority : Secretary, MA&UD, Government of Andhra Pradesh Procedure for Filing an Appeal: - An appeal must be filed within 7 days from the date of the decision being appealed. - The appeal must be submitted in writing to the Appellate Authority, clearly stating the grounds for the appeal. - The appellant must provide copies of all relevant documents, including the original decision, supporting evidence, and any other relevant materials. - The Appellate Authority shall acknowledge receipt of the appeal and inform the appellant of the date and time for the hearing. - The Appellate Authority may conduct a hearing to consider the appeal. Both parties may present their arguments and evidence. - The Appellate Authority shall issue a written decision within 15 days of the hearing. The decision shall be final and binding on both parties.

	An appeal may be filed on any of the above if: - The original decision was based on incorrect facts or evidence. - The original decision was contrary to law or AP procurement guidelines. - The original decision was arbitrary, capricious, or unreasonable. - The original decision was biased or prejudiced. **<u>Procedure for post contract award:</u>** Modes of Settlement of claims/ disputes & place of exclusive jurisdiction: If any claim, dispute or disagreement of any kind whatsoever arises between the contractor and the employer, in connection with or arising out of or touching upon this Contract, including without prejudice to the generality of the foregoing, any question regarding its existence, validity, termination, or execution, whether before or after the termination, abandonment or breach of this Contract ("Dispute"), the Parties will seek to resolve the Dispute by mutual consultation within 15(fifteen) days from the occurrence of such Dispute and written representation given for it on behalf of the employer to the contractor or by the contractor to the employer, Lenin Centre, Governor pet, Vijayawada, AP. If the Parties fail to resolve the Dispute by mutual consultation within said 15 days' time, then, the provisions of Clause below will apply. SETTLEMENT OF CLAIMS: All disputes or difference arising of or relating to the Contract shall be referred for Evaluation and Negotiation as follows: a) Claims up to a value of Rupees 10,000/- by Superintending Engineer, APCRDA b) Claims above Rs. 10,000/- and up to Rupees 50,000/- by Chief Engineer, APCRDA c) Settlement of Claims above Rs. 50,000/- Appellate Authority. In the event of failure to resolve the dispute by the Superintending Engineer and / or Chief Engineer of APCRDA within the said 15 days of bringing it to their notice respectively, such disputes shall be referred to the Appellate Authority for resolution. The Appellate Authority for the purpose of this contract is the Secretary, MA&UD, Government of Andhra Pradesh may seek technical advice from the independent technical advisor

	The Appellate Authority shall have exclusive jurisdiction to hear and resolve any disputes between the parties, and its decision shall be binding and final, subject to any legal rights of appeal. If any Dispute is not resolved by the Parties within 15(fifteen) days of the appeal to the Appellate Authority, the contractor has to approach a Civil Court of competent jurisdiction by way of Civil suit and not by arbitration.

Section III - Evaluation and Qualification Criteria

I / WE hereby declare that I / WE have not been blacklisted / debarred / Suspended / demoted in any department in Andhra Pradesh or in any State or the Government of India or World Bank or Asian Development Bank, due to any reasons.

I / WE hereby declare that I/We have not been suspended or terminated and/or performance security called by an employer for reasons related to the non-compliance of any environmental, or social (including sexual exploitation and abuse (SEA) and gender based violence (GBV) or health or safety requirements or safeguard in the past five years.

I / WE hereby declare that I/We will ensure that the personnel employed by us sign and comply with the Code of Conduct (E&S) throughout the contract duration.

Signature of the Bidder

LETTER OF BID

Date: ……

To
The COMMISSIONER
APCRDA
Vijayawada, Andhra Pradesh

Sir,

- I / We do hereby tender and if this tender be accepted, undertake to execute the following work viz. **As specified in NIT** as shown in the drawings and described in the specifications deposited in the Office of the Commissioner, APCRDA, VIJAWADA with such variations by way of alterations or additions to, and omissions from the said works and method ofpayment as provided for in the "Conditions of the Contract".

- I/We agree to execute the work when the lump sum payment under the terms of the agreement.

- I/We have quoted Percentage excess or less on E.C.V. / Lump-sum, both in words & figures. In case of any discrepancy between the Percentage excess or less on ECV, in words and figures, the rates quoted words only shall prevail.

- I/We agreed to keep the offer in this tender valid a period of Three month(s) mentioned in the tender notice and not to modify the whole or any part of it for any reason within above period. If the tender is withdrawn by me/us for any reasons whatsoever, the earnest moneypaid by me/us will be forfeited to Government

- I/We hereby distinctly and expressly, declare and acknowledge that, before the submission of my/our tender I/We have carefully followed the instructions in the tender notice and thatI/We have made such examination of the Contract documents and the plans, specifications and of the location where the said work is to be done, and such investigation of the work required to be done, and in regard to the material required to be furnished as to enable me/us to thoroughly understand the intention of same and the requirements, covenants, agreements, stipulations and restrictions contained in the contract, and in the said plans and specifications and distinctly agree that I/We will not hereafter make any claim ordemand upon the Employer/ Government/ Municipal based upon or arising out of any alleged misunderstanding or misconception /or mistake on my/or our part of the said requirement, covenants, agreements, stipulations, restrictions and conditions.

- I/WE shall not assign the contractor or sublet any portion of the same. In case if it becomes necessary such subletting with the permission of the tender inviting authority in terms of Conditions of Contract.

- If upon written intimation to me/us by the tender inviting authority Office, I/We fail to attend

the said office on the date herein fixed or if upon intimation being given to me/us by the Authority or acceptance of my/our tender, and if I/We fail to make the EMD or to enter into the required agreement as defined in Conditions of Contract, then I/We agree the forfeiture of the bid security. Any notice required to be served on me/us here under shall be sufficiently served on me/us if delivered to me/us hereunder shall be sufficiently served on me/us if delivered to me/us personally or forwarded to me/us by post to (registered or ordinary) or left at my/our address given herein. Such notice shall if sent by post be deemed to have been served on me/us at the time wherein due course of post it would be delivered at the address to which it is sent.

- I/WE fully understand that the written agreement to be entered into between me/us and Authority shall be the foundation of the rights of the both the parties and the contract shall not be deemed to be complete until the agreement has first been signed by me/us and then by the proper officer authorized to enter into contract on behalf of Government.

- I/WE agree to pay the transaction fee as per G.O.Ms.13 dated 05.07.2006 in favour of M/s. APTS, Vijayawada towards transaction fee on e-procurement and hand over the same to CHIEF ENGINEER – _____ APCRDA, Vijayawada at the time of submission of EMD. Another amount of 0.04% of ECV (estimated contract value) with a cap of Rs. 10,000 (Rupees Ten thousand only) for all works with ECV up to Rs.50 Crores, and Rs. 25,000/- (Rupees Twenty-five thousand only) for works with ECV above Rs.50 Crores, should be paid online in favour of Managing Director, APTS Vijayawada, at the time of conclusion of agreement if work is awarded to me/us.

  I AM/WE ARE authorized to sign and my/our designation is given below:

Name of the Bidder: *[*insert complete name of person signing the Bid*]

Name of the person duly authorized to sign the Bid on behalf of the Bidder:**[*insert complete name of person duly authorized to sign the Bid*]

Title of the person signing the Bid: [*insert complete title of the person signing the Bid*]

Signature of the person named above: [*insert signature of person whose name and capacity are shown above*]

Date signed [*insert date of signing*] **day of** [*insert month*], [*insert year*]

**: Person signing the Bid shall have the power of attorney given by the Bidder to be attached with the Bid

BIDDER'S CERTIFICATE.

- I/WE hereby declare that I/We have perused in detail and examined closely the Conditions of Contract, all clauses of the preliminary specifications with all amendments and have either examined all the standards specifications or will examine all the standard specifications for items for which I/We tender, before I/We submit such tender and agree to be bound and comply with all such specificationsfor this agreement which I/We execute in the APCRDA.

- I/WE certify that I/We have inspected the site of the work before quoting my Price, I/We have satisfied about the quality, availability and transport facilities for stones,sand and other materials.*

- I/WE am/are prepared to furnish detailed data in support of all my quoted rates, if and when called upon to do so without any reservations.

- I/WE hereby declare that I/We will pay an additional security deposit in terms of conditions, the difference between 75% of ECV Value and my/out tender amount, in case if my / our offer is less than (-)25%.

- I/WE hereby declare that I am/we are accepting for the defect liability period as 24 months.

- I / WE declare that I / WE will procure the required construction materials including earth and use for the work after approval of the Authority's Representative. The responsibility for arranging and obtaining the land for borrowing or exploitation in any other way shall rest with me/us for the materials for construction, I / WE shall ensure smooth and un-interrupted supply of materials.

- I / WE declare that the responsibility for arranging and obtaining the land for disposal of spoil/soil not useful for construction purposes shall rest with me/us.

- I / WE declare that I/WE shall not claim any compensation or any payment forthe land so arranged for disposal of soil and the land for borrow area. My/our quoted percentage Price are inclusive of the land so arranged and I/We will hand over the land so arranged for disposal of soil to, the department after completionof work.

- I / WE declare that I / WE will not claim any extra amount towards any material used for the work other than the quoted works.

- I / WE declare that I / WE will execute the work as per the milestone programme,and if I / WE fail to complete the work as per the mile stone programme I abide bythe condition to recover liquidated damages as per the tender conditions.
- I / WE declare that I / WE will abide for settlement of disputes as per the tenderconditions.

* Note: The bidder shall provide evidence of the site visit by attaching images of the site, including GPS location, date, and time stamps. The concerned Chief Engineer of the Work will facilitate the prospective bidders for the visit to the proposed site of work. As a proof of site visit, the bidders shall

upload the photographs with geographical coordinates and certificate attested by the Chief Engineer without fail.

DECLARATION OF THE BIDDER.

I/WE have not been blacklisted by any department in Andhra Pradesh/ Government of India/ World Bank/ ADB, due to any reasons.

I/WE have not been demoted to the next lower category for not filing the tenders after buying the tender schedules in a whole year and my/our registration has not been cancelled for a similar default in two consecutive years.

I/WE agree to disqualify me/us for any wrong declaration in respect of the above and to summarily reject my/our tender.

I/WE have not misled or made false representation in the forms, statements submitted in proof of the qualification requirements of record of poor performance such as abandoning works not properly completed in the contract, inordinate delays in completions, litigation history and or financial failures and / or participated in the previous tendering for the same works and had quoted unreasonably high bid prices, in the preceding 10 (ten) financial years.

I / WE hereby declare that I/We have not been suspended or terminated and/or performance security called by an employer for reasons related to the non-compliance of any environmental, or social (including sexual exploitation and abuse (SEA) and gender based violence (GBV) or health or safety requirements or safeguard in the past five years.

I / WE hereby declare that I/We will ensure that the personnel employed by us sign and comply with the Code of Conduct (E&S) throughout the contract duration.

We acknowledge that we have read and understand ADB's Anticorruption Policy (1998) and Integrity Principles and Guidelines (2015), both as amended from time to time.

"Our firm, Joint Venture partners, our respective direct and indirect shareholders, directors, key officers, key personnel, associates, parent company, affiliates or subsidiaries, including any Subcontractors, consultants, subconsultants, manufacturers, service providers or Suppliers for any part of the contract, are not subject to, or not controlled by any entity or individual that is subject to, a temporary suspension or a debarment imposed by the Asian Development Bank or a debarment imposed by the Asian Development Bank in accordance with the Agreement for Mutual Enforcement of Debarment Decisions between the Asian Development Bank and other development banks[4].

We have checked all the parties mentioned in the declaration above against ADB's published sanctions list accessed via https://www.adb.org/who-we-are/integrity/sanctions.

Our firm, Joint Venture partners, our respective direct and indirect shareholders, directors, key officers, key personnel, associates, parent company, affiliates or subsidiaries, including any

[4] These institutions include African Development Bank, European Bank for Reconstruction and Development, Inter-American Development Bank, and the World Bank Group. According to paragraph 9 of the Agreement, other international financial institutions may join upon the consent of all Participating Institutions and signature of a Letter of Adherence by the international financial institution substantially in the form provided (Annex B to the Agreement). Upon adherence, such international financial institution shall become a Participating Institution for purposes of the Agreement. Bidders are advised to check www.adb.org/integrity for updates."

Subcontractors, consultants, subconsultants, manufacturers, service providers or Suppliers for any part of the contract, are not under ongoing investigation and/or sanctions proceedings by the Asian Development Bank or any multilateral development bank.
If under ongoing investigation and/or sanctions proceedings by the Asian Development Bank or any multilateral development bank, please state details:
Name of the multilateral development bank: _____
Reason for the ongoing investigation / allegations: _____

Our firm, Joint Venture partners, our respective direct and indirect shareholders, directors, key officers, key personnel, associates, parent company, affiliates or subsidiaries, including any Subcontractors, consultants, subconsultants, manufacturers, service providers or Suppliers for any part of the Contract, are not temporarily suspended, debarred, declared ineligible, or subject to any national and/or international sanctions by any country, any international organization, any multilateral development bank and other donor agency.
If so temporarily suspended, debarred, declared ineligible, or subject to any national and/or international sanctions by any country, any international organization, any multilateral development bank and other donor agency, please state details (as applicable to each Joint Venture partner, their respective direct or indirect shareholders, directors, key officers, key personnel, associate, parent company, affiliate, subsidiaries, Subcontractors, consultants, subconsultants, manufacturers, service providers and/or Suppliers):

(i) Name of Institution: _____

(ii) Period of the temporary suspension, debarment, ineligibility, or national or international sanction [start and end date]: _____

(iii) Reason for the temporary suspension, debarment, ineligibility, or national or international sanction: _____

At any time following submission of our Bid, we shall permit, and shall cause our Joint Venture partners, directors, key officers, key personnel, associates, parent company, affiliates or subsidiaries, including any Subcontractors, consultants, subconsultants, manufacturers, service providers or Suppliers for any part of the contract to permit ADB or its representative to inspect our site, assets, accounts and records and other documents relating to the bid submission and to have them audited by auditors appointed by ADB. We understand that failure of this obligation may constitute obstructive practice that may result in debarment and/or contract termination.

Address of the Bidder:

Phone No.:
Fax/mail .:

BIDDER.

Note: If the tender is made by an individual, it shall be signed with their full name and their address shall be given. If it is made by a firm, it shall be signed with the co- partnership name by a member of the firm, who shall also sign their own name, and the name and address of each member of the firm shall be given, if the tender is made by a corporation it shall be signed by a duly authorized officer who shall produce with their tender satisfactory evidence of their authorization. Such tendering corporation may be required before the contract is executed, to furnish evidence of its corporate existence. Tenders signed on behalf of G.P.A. holder will be rejected.

STATEMENT – I: Annual Financial turnover

Sl. No.	Financial Year	Value in Rs.
1.		
2.		
3.		
4.		
5.		
6.		
7.		
8.		
9.		
10.		

Notes:

a. Attach copies of Audited Balance Sheet certified by Statutory Auditor/CA

Signature of the Bidder

STATEMENT – II: Details of similar nature of works completed during the last ten financial years.

Sl. No	Name of the work	Address of Agt. Concluding Authority	Agreement No. & dated.	Value of Contract	Stipulated period of completion	Actual date of completion	Value of work done year wise during the last 'ten' years.									
							1st Year	2nd Year	3rd Year	4th Year	5th year	6th year	7th year	8th year	9th year	10th year
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17

Attach certificates issued by the Executive Engineer concerned and countersigned by the Superintendent Engineer / Chief Engineer of State Government or equivalent in cadre for Central / any state govt. / public undertakings showing work wise / year wise value of work done and date of completion.

Signature of the Bidder

STATEMENT – III: Criterion for satisfactorily completed projects

Sl. No.	Project	Key Components/ Description of the Project	Start Date	Stipulated Date of completion	Actual Date of Completion	Value of Work	Prime Quantity Executed (with units)

Attach certificates issued by the Executive Engineer concerned and countersigned by the Superintendent Engineer / Chief Engineer of State Government or equivalent in cadre for Central / any state govt. / public undertakings showing work wise / year wise value of work done and date of completion.

Signature of the Bidder

STATEMENT – IV: Details of Bidder

1. Details of Bidder
   a) Name
   b) Country of incorporation
   c) Address of the corporate headquarters and its branch office(s), if any, inIndia:
   d) Date of incorporation and/ or commencement of business

2. Brief description of the Company including details of its main lines of businessand proposed role and responsibilities in this Project:

3. Details of individual(s) who will serve as the point of contact/ communication forthe Employer:
   a) Name
   b) Designation
   c) Company
   d) Address
   e) Telephone number
   f) E-mail address
   g) Fax Number

4. Particulars of the Authorised Signatory of the Bidder
   a) Name
   b) Designation
   c) Address
   d) Telephone number
   e) Fax Number

Name of Bidder:

No.	Criteria	Yes	No
1.	Has the Bidder been barred by the [Central/ State] Government, or any entity controlled by it or World Bank or ADB, from participating in any project (BOT, EPC or otherwise).		
2.	If the answer to 1 is yes, does the bar subsist as on the date of Bid.		

5. The updated following information of the Bidder:

Name of Applicant:

Sl. No	Criteria	Yes/No
1	Updated details of on-going process of blacklisting ifso, under any contract with Authority / Government/ World Bank/ ADB on the Bidder.	

6. A Statement by the Bidder disclosing material non-performance or contractual non-compliance in past projects, contractual disputes and litigation/ arbitration in the recentpast is given below (Attach extra sheets, if necessary):

Signature of the Bidder

STATEMENT V: Availability of Critical Equipment

The Bidder should furnish the information required below, regarding the availability of the equipment, required for construction / quality control.

Sl. No.	Details of Equipment	Number required	Number		
			Owned	Leased	To be procured
1	2	3	4	5	6

Note: On Key and Critical Equipment:
The Key and Critical Equipment must be either owned with proof of owning (registration with RTA and the like) or leased with proof of such lease (the period of lease must be with right of renewal and for complete period of contract with such extended periods if any in future for any contingency and till completion, on Rs.100/- Stamp paper duly executed and notarized).

Signature of the Bidder

A declaration regarding the equipment owned shall be produced by the Bidder on a non-judicial stamp paper of Rs.....as below.

DECLARATION

"I ……. do hereby solemnly affirm and declare that I /we own the following equipment for using on the subject work and declare that I / We will abide by any action such as disqualification or determination of Contract or blacklisting or any action deemed fit, if the department detects at any stage that I/we do not possess the equipment listed below.

	Year 1	**Year 2**	**Year 3**	**Year4**	**Year 5**
Statement of Financial Position (Information from Balance Sheet)					
Total Assets (TA)					
Total Liabilities (TL)					
Total Equity/Net Worth (NW)					
Current Assets (CA)					
Current Liabilities (CL)					
Working Capital (WC)					
Information from Income Statement					
Total Revenue (TR)					
Profits Before Taxes (PBT)					
Cash Flow Information					
Cash Flow from OperatingActivities					

Sources of Finance

Specify sources of finance to meet the cash flow requirements on works currently inprogress and for future contract commitments.

No.	Source of finance	Amount (INR equivalent)
1		
2		
3		

2. Financial documents

The Bidder and its parties shall provide copies of financial statements for *five (5)* years pursuant Section III, Evaluation and Qualifications Criteria, Sub-factor 3.1. The financial statements shall:

(a) Reflect the financial situation of the Bidder, and not an affiliated entity (such as parentcompany or group member).

(b) Be independently audited or certified in accordance with local legislation.

(c) Be complete, including all notes to the financial statements.

(d) Correspond to accounting periods already completed and audited.

Attached are copies of financial statements[1] for the *five (5)* years required above; andcomplying with the requirements

Signature of the Bidder

If the most recent set of financial statements is for a period earlier than 12 months from the date of bid, thereason for this should be justified.

STATEMENT IX: Work Plan and Methodology

Insert proposed methodology, program of construction, equipment deployment plan duly supported with broad calculations justifying capability of execution and completion of work including following details:

a) Bidders' appreciation of the Project
b) Bidders' organization setup for the Project
c) Management of Design & Engineering services
d) Site Logistics & Plan for temporary infrastructure
e) Construction methodology
f) Proposed deployment of key personnel
g) Proposed deployment of Construction equipment
h) Proposed construction schedule
i) Quality control & Assurance system
j) Proposed source of material
k) Safety Plan (EHS Management Plan)
l) Management Strategies and Implementation Plans (MSIP) to manage the (ES) risks

Signature of the Bidder

STATEMENT X: Bid Capacity Calculation

Information required to evaluate the BID Capacity:

Other Eligibility conditions (on Bid capacity/ Qualification criteria of bidders) shall include Bidder shall also fulfil the eligibility criteria such that their available Bid capacity is more than the approximate Estimated Project Cost indicated in this RFP.

The available Bid capacity will be calculated as under: Assessed Average Bid Capacity=[(3 x A x N) – B] - which shall be more than the ECV, Where:

A= Maximum value of Civil Engineering works executed in any one financial year during last 5 financial years (01-04-2014 to 31-03-2024) updated by giving 10% simple weightage per year to bring them to Financial Year 2024 - 2025 considering the completed as well as works in progress which shall be certified by the Chartered Accountant.

N= Number of years prescribed for completion of work for which Bid is invited

B= Value at current price level of existing commitments and ongoing works to be completed during the period of works for which bids are invited.

Without compliance to the above, the calculation shown by the bidder simply on bid capacity cannot be considered but for rejection of bid on the said requirement".

In case the bidder submits that there are no existing commitments and ongoing works anywhere in the country, the bidder shall file an affidavit to that effect duly notarized with undertaking for criminal prosecution if anything found in the affidavit information is untrue besides right of the employer to terminate the contract and for other legal recourse.

Without compliance to the above, the calculation shown by the bidder simply on bid capacity cannot be considered but for rejection of bid on the said requirement".

ASSESSED AVAILABLE BID CAPACITY = (A*N*2 – B)

Where,

N= Number of years prescribed for completion of work for which Bid is invited.

A = Maximum value of Civil Engineering works executed in any one year during last 5 years (01-04-2014 to 31-03-2024) updated by giving 10% simple weightage per year to bring them to Financial Year 2024 - 2025 considering the completed as well as works in progress.

To calculate the value of "A"

1. A table containing value of Civil Engineering Works in respect to Projects (EPC Contract / Item Rate Contract / Lumpsum Contract / Construction works) undertaken by the Bidder

during the last 10 years is as follows:

2.

Sl.No	**Year**	Value of Civil Engineering Works undertaken w.r.t Projects(Rs. in Crores)
1	2023-24/2023	
2	2022-23/2022	
3	2021-22/2021	
4	2020-21/2020	
5	2019-20/2019	
6	2018-19/2018	
7	2017-18/2017	
8	2016-17/2016	
9	2015-16/2015	
10	2014-15/2014	

3. Maximum value of projects that have been undertaken during the F.Y. _________ out of the last 5 years and value thereof is Rs. Crores (Rupees). Further, value updated to the price level of the year indicated below:

Rs._ _ _ _ _ _ _ _ _ _ _ _ _ Crores x _ _ _ _ _ _ _ _ _ _ _ (*Updation Factor*) = Rs._ _ _ _ _ _ _ _ _ _ _ Crores (Rupees_ _)

…………………….. …………………….. Signature, name and designation of Authorised Signatory For and on behalf of ………………(*Name of the* Bidder)	………………………… …………………………. Name of the Statutory Auditor's firm/**Chartered Accountant:** Seal of the audit firm/**Chartered Accountant**: (Signature, name and designation and Membership No. of authorised signatory)

To calculate the value of "B"

A table containing value of all the existing commitments and on-going works to be completed during the next 3 years is as follows:

Sl. No.	**Name of Project/ Work**	**Percentageof participation of Bidder in the project**	**Dater of start / appointed date of project**	**Value of contract as per Agreement /LOA**	**Value of work completed**	**Balance value of work tobe completed**	**Anticipated date of completion**	**Balance value of work at 2024-25 price level**
				Rs. in Crores	Rs. in Crores	Rs. in Crores		Rs. in Crores

FORMAT 1 - FORM OF BID SECURITY – Option 1 - Demand Guarantee

Beneficiary :_____
Invitation for Bids No :_____
Date :_____
BID GUARANTEE No. : _____
Guarantor : _____

1. We have been informed that_____(hereinafter called "the Applicant") has submitted or will submit to the Beneficiary its bid (hereinafter called "the Bid") for the execution of_____under Invitation for Bids No._____ ("the NIT no.").

2. Furthermore, we understand that, according to the Beneficiary's conditions, bids must be supported by a bid guarantee.

3. At the request of the Applicant, we, as Guarantor, hereby irrevocably undertake to pay the Beneficiary any sum or sums not exceeding in total an amount of _____ (_____) upon receipt by us of the Beneficiary's complying demand, supported by the Beneficiary's statement, whether in the demand itself or a separate signed document accompanying or identifying the demand, stating that either the Applicant:

    a. Has withdrawn its Bid during the period of bid validity set forth in the Applicant's Letter of Bid ("the Bid Validity Period"), or any extension thereto provided by the Applicant; or

    b. Having been notified of the acceptance of its Bid by the Beneficiary during the Bid Validity Period or any extension thereto provided by the Applicant, (i) has failed to execute the contract agreement, or (ii) has failed to furnish the performance security, in accordance with the Instructions to Bidders ("ITB") of the Beneficiary's bidding document.

4. This guarantee will expire: (a) if the Applicant is the successful bidder, upon our receipt of copies of the Contract Agreement signed by the Applicant and the EMD issued to the Beneficiary in relation to such Contract Agreement; or (b) if the Applicant is not the successful bidder, upon the earlier of (i) our receipt of a copy of the Beneficiary's notification to the Applicant of the results of the bidding process; or (ii) thirty days after the end of the Bid Validity Period.

5. Consequently, any demand for payment under this guarantee must be received by us at the office indicated above on or before that date.

FORMAT 2 - FORM OF BID SECURITY – Option 2 – Insurance Surety Bond

(To be executed on Non-Judicial Stamp Paper of Appropriate value)

Insurance Surety Bond No.....

Date:……

(Name of Contract)

To: (Name and address of Employer)

WHEREAS (name of Bidder) (hereinafter called "the Bidder") has submitted its Bid dated (date of bid) for the performance of the above named Contract (hereinafter called "the Bid")

KNOW ALL PERSONS by these present that We (name of Insurance Company) of..... (address of Insurance Company) (hereinafter called "the Surety"), are bound unto Andhra Pradesh Capital Region Development Authority (APCRDA) (hereinafter called "the Employer") for the sum of..... (amount), for which payment well and truly to be made to the said Employer, the Surety binds itself, its successors and assigns by these presents.

THE CONDITIONS of this obligation are as follows:

1. If the Bidder (a) withdraws or modifies its Bid during the period of bid validity, or (b) adopts corrupt or collusive or coercive or fraudulent practices.

2. If the Bidder, having been notified of the acceptance of its Bid by the Employer during the period of bid validity.

(a) fails or refuses to sign the Contract Agreement when required, or

(b) fails or refuses to submit the performance security in accordance with the Tender Documents.

We undertake to pay to the Employer up to the above amount upon receipt of its first written demand, without the Employer having to substantiate its demand, provided that in its demand the Employer will mention that the amount claimed by it is due, owing to the occurrence of one or both of the two above-named CONDITIONS, and specifying the occurred condition or conditions.

The Surety declares that this Insurance Surety Bond is issued by the…….. (name of Insurance Company) as per the applicable rules and regulations of Insurance Regulatory Development Authority of India (IRDAI).

This Insurance Surety Bond will remain in force up to and including (date 90 days after the period of bid validity), and any demand in respect thereof must reach the Surety not later than the above date.

Section V - Fraud and Corruption

The World Bank's Guidelines on Preventing and Combating Fraud and Corruption in Program for Results Financing dated February 1, 2012 and revised July 10, 2015 (hereinafter, "WB Guidelines") will be applicable to this contract as provided at Sub Section A of the Section V of tender document) and may be accessed at https://www.worldbank.org/en/programs/program-for-results-financing#3

ADB's Guidelines to Prevent or Mitigate Fraud, Corruption, and Other Prohibited Activities in Results-Based Lending for Programs (hereinafter "ADB Guidelines") as provided at Sub Section B of the Section V of tender document, will be applicable to this contract.

Where applicable, the ADB Guidelines and the WB Guidelines will be collectively called "Anti-corruption Guidelines".

1. It is the Employer's policy to require that bidders, suppliers, contractors and their agents (whether declared or not), sub-contractors, sub-consultants, service providers or suppliers, and any personnel thereof, observe the highest standard of ethics during the procurement and execution of the contracts[5]. The employer:
    a. defines "Prohibited Practice" to comprise of any or all the following terms collectively
        i. Corrupt practice means (i) The offering, giving, receiving, or soliciting, directly or indirectly, of anything of value to influence the action of any person connected with the Selection Process (for avoidance of doubt, offering of employment to or employing or engaging in any manner whatsoever, directly or indirectly, any official of the Authority who is or has been associated in any manner, directly or indirectly with the Selection Process or the LOA or has dealt with matters concerning the Agreement or arising there from, before or after the execution thereof, at any time prior to the expiry of one year from the date such official resigns or retires from or otherwise ceases to be in the service of the Authority, shall be deemed to constitute influencing the actions of a person connected with the Selection Process); Or (ii) Save and except as permitted under the Clauses relating to Bid Security (EMD)/Performance security of this Bidding Document as provided herein, engaging in any manner whatsoever, whether during the Selection Process or after the issue of the LOA or after the execution of the Agreement, as the case may be, any person in respect of any matter relating to the Project or the LOA or the Agreement, who at any time has been or is a legal, financial, or technical consultant/ adviser of the Authority in relation to any matter concerning the Project;
        ii. Fraudulent practice means a misrepresentation or omission of facts or disclosure of incomplete facts, in order to influence the Selection Process;
        iii. Coercive practice means impairing or harming or threatening to impair or harm, directly or indirectly, any persons or property to influence any person's participation or action in the Selection Process;

[5] In this context, any action to influence the procurement process or contract execution for undue advantage is improper

iv. Undesirable practice means establishing contact with any person connected with or employed or engaged by the Authority with the objective of canvassing, lobbying or in any manner influencing or attempting to influence the Selection Process;

v. Restrictive practice means forming a cartel or arriving at any understanding or arrangement among Bidders with the objective of restricting or manipulating a full and fair competition in the Selection Process.

b. will reject a proposal for award if it determines that the bidder recommended for award has, directly or through an agent, engaged in prohibited practices in competing for the contract in question; and

c. will blacklist bidder or individual, including declaring ineligible, either indefinitely or for a stated period of time, to be awarded a contract if it at any time determines that the Consultant has, directly or through an agent, engaged in prohibited practices in bidding for, or in executing, a contract of the employer.

d. Besides above, the Government of Andhra Pradesh, the World Bank, the Asian Development Bank anti-corruption guidelines will apply to this Contract. Please refer to below for the same.

e. The bidders participating to the Program activities shall submit a self-declaration stating that the firm is not subject to ineligibility or has not been sanctioned under (i) the World Bank system of debarment and cross-debarment and/or

(ii) ADB's Debarment and Suspension Register.

f. The list of ineligible firms or individuals may be accessed at the following websites:

https://www.worldbank.org/debarr

Anti-Corruption Guidelines

Definitions
'ADB': Asian Development Bank
'ADB Guidelines': ADB's Guidelines to Prevent or Mitigate Fraud, Corruption, and Other Prohibited Activities in Results-Based Lending for Programs
'World Bank': means the International Bank for Reconstruction and Development (IBRD) or the International Development Association (IDA).
'WB Guidelines': World Bank's Guidelines on Preventing and Combating Fraud and Corruption in Program for Results Financing dated February 1, 2012 and revised July 10, 2015
'Anticorruption Guidelines': collective term for the ADB Guidelines and WB Guidelines.

These guidelines shall be in the Procurement Document (Tender) and also be part of the resultant Contract agreement.

Sub-Section A

Guidelines on Preventing and Combating Fraud and Corruption in Program-for-Results Financing' dated February 1, 2012 and revised on July 10, 2015 (the Anti-Corruption Guidelines (WORLD BANK)

https://www.worldbank.org/en/programs/program-for-results-financing#3)

1. These Guidelines address Fraud and Corruption (as defined in paragraph 5) that may occur in connection with the preparation and implementation of programs financed, in whole or in part, by the International Bank for Reconstruction and Development (IBRD) or the International Development Association (IDA) through Program-for-Results Financing. They set out the general principles, requirements, and sanctions applicable to such programs.

2. The Loan Agreement providing for the Loan governs the legal relationships between the Borrower and the Bank with respect to the Program for which the Loan is made. The responsibility for the implementation of the Program under the Loan Agreement, including the primary responsibility for preventing and combating Fraud and Corruption, rests with the Borrower. The Bank, for its part, has a fiduciary duty under its Articles of Agreement to "make arrangements to ensure that the proceeds of any loan are used only for the purposes for which the loan was granted, with due attention to considerations of economy and efficiency and without regard to political or other non-economic influences or considerations." These Guidelines constitute an important element of those arrangements and are made applicable to the preparation and implementation of the Program as provided in the Loan Agreement.

3. Recognizing that Fraud and Corruption leads to wasted resources and undermines development effectiveness, the Bank and the Borrower agree that all individuals and entities participating in the Program must observe the highest standard of ethics and, specifically, that all such persons and entities must take all appropriate measures to prevent and combat Fraud and Corruption, and refrain from engaging in Fraud and Corruption, in connection with the Program. In furtherance of these principles and purposes, the Bank and the Borrower further agree and commit to undertaking the actions set out in these Guidelines for the purpose of preventing and combating Fraud and Corruption in connection with the Program.

Definitions of Practices constituting Fraud and Corruption

4. These Guidelines address the following defined practices in connection with the Program:

(a) A "corrupt practice" is the offering, giving, receiving, or soliciting, directly or indirectly, of anything of value to influence improperly the actions of another party.
(b) A "fraudulent practice" is any act or omission, including a misrepresentation, that knowingly or recklessly misleads, or attempts to mislead, a party to obtain a financial or other benefit or to avoid an obligation.
(c) A "collusive practice" is an arrangement between two or more parties designed to achieve an improper purpose, including to influence improperly the actions of another party.
(d) A "coercive practice" is impairing or harming, or threatening to impair or harm, directly or indirectly, any party or the property of the party to influence improperly the actions of a party.
(e) An "obstructive practice" is (i) deliberately destroying, falsifying, altering or concealing of evidence material to the investigation or making false statements to investigators in order to materially impede a Bank investigation into allegations of a corrupt, fraudulent, coercive, or collusive practice; and/or threatening, harassing or intimidating any party to prevent it from disclosing its knowledge of matters relevant to the investigation or from pursuing the investigation, or (ii) acts

intended to materially impede the exercise of the Bank's contractual rights of audit or access to information.

5. The above practices, as so defined, are referred to collectively in these Guidelines as "Fraud and Corruption."

Borrower Actions to Prevent and Combat Fraud and Corruption in connection with the Program

6. In furtherance of the above-stated purpose and general principles, except as otherwise agreed in writing by the Borrower and the Bank, the Borrower:

(a) takes all appropriate measures to ensure that the Program is carried out in accordance with these Guidelines;
(b) takes all appropriate measures to prevent Fraud and Corruption in connection with the Program, including (but not limited to) adopting and implementing appropriate fiduciary and administrative practices and institutional arrangements;
(c) promptly informs the Bank of all credible and material allegations or other indications of Fraud and Corruption in connection with the Program that come to its attention, together with the investigative and other actions that the Borrower proposes to take with respect thereto;
(d) unless otherwise agreed by the Borrower and the Bank with respect to a particular case, takes timely and appropriate action to investigate such allegations and indications; reports to the Bank on the actions taken in any such investigation, at such intervals as may be agreed between the Borrower and the Bank; and, promptly upon the completion of any such investigation, reports to the Bank the findings thereof;
(e) if the Borrower or the Bank determines that any person or entity has engaged in Fraud and Corruption in connection with the Program, takes timely and appropriate action, satisfactory to the Bank, to remedy or otherwise address the situation and prevent its recurrence; provided that nothing in this sub-paragraph (e) or in sub-paragraph (d) above obligates the Borrower to take action in direct contradiction of the applicable law of the Member Country;
(f) cooperates fully with representatives of the Bank in any inquiry conducted by the Bank into allegations or other indications of Fraud and Corruption in connection with the Program, and takes all appropriate measures to ensure the full cooperation of relevant persons and entities subject to the Borrower's jurisdiction in such inquiry; and
(g) ensures that any person or entity debarred or suspended by the Bank is not awarded a contract under or otherwise allowed to participate in the Program during the period of such debarment or suspension.

Sanctions and Related Actions by the Bank in cases of Fraud and Corruption

7. In furtherance of the above-stated purpose and general principles, except as otherwise agreed in writing by the Borrower and the Bank, the Bank:

(a) promptly informs the Borrower of all credible and material allegations or other indications of Fraud and Corruption in connection with the Program that come to its attention, consistent with Bank policies and procedures.

(b) in cases where the Bank determines it necessary to do so to fulfill its fiduciary duty, may conduct an inquiry into such allegations or other indications, independently of or in collaboration with the Borrower.

(c) reports to the Borrower on the outcome of any such inquiry; and

(d) may sanction any individual or entity other than the Member Country if at any time the Bank determines that such individual or entity has engaged in Fraud and Corruption in connection with the Program or any other Bank-financed activity or is otherwise subject to sanction pursuant to its prevailing policies and procedures.

Miscellaneous

8. For avoidance of doubt, nothing in these Guidelines is intended to restrict or otherwise affect the Member Country's sovereign right to investigate, prosecute or take any other action in furtherance of its own laws and regulations. Any inquiries conducted by the Bank pursuant to these Guidelines are administrative in nature, for the purpose of determining compliance with the Bank's policies, directives and procedures. Inquiries include, but are not limited to, the review of relevant accounts, records and other documents, and interviews with relevant persons.

9. Without prejudice to any provision hereof, if any action to be taken by the Borrower under these Guidelines may conflict with requirements of the applicable laws and regulations of the Member Country, the Bank and the Borrower will consult with a view to identifying and agreeing on alternative actions that will avoid such conflict while ensuring compliance herewith.

10. The provisions of these Guidelines do not limit any other rights, remedies or obligations of the Bank or the Borrower under the Loan Agreement or any other document to which the Bank and the Borrower are both parties.

Sub-Section B

ADB Guidelines To Prevent Or Mitigate Fraud, Corruption, And Other Prohibited Activities In Results-Based Lending For Programs (To Prevent Or Mitigate Fraud, Corruption, And Other Prohibited Activities In Results-Based Lending For Programs (The ADB Guidelines)

A. Purpose and General Principles

1. The developing member country (DMC) is responsible for the implementation of programs supported by results-based lending (RBL). The Asian Development Bank (ADB) has a fiduciary responsibility to ensure that its loans and other forms of financing are used only for the purposes for which they were granted, in accordance with the Agreement Establishing the Asian Development Bank (the Charter).[6] To uphold that obligation, ADB presents these guidelines to prevent or mitigate fraud, corruption, and other prohibited activities[7] (referred to as 'integrity violations' in ADB's Investigation and Enforcement Framework,[8] 2024 as amended from time to time, or IEF for brevity, in RBL operations financed in whole or in part by ADB. These guidelines build upon the legal obligations presented in the loan agreement and apply to operations funded by RBL.[9]

2. These guidelines do not limit any other rights, remedies, or obligations of ADB or the DMC under the loan agreement or any other agreement to which the ADB and the DMC are both parties.

[6] ADB. 1966. Agreement Establishing the Asian Development Bank.
[7] These are referred to as "integrity violations" in ADB's Investigation and Enforcement Framework, 2024 as amended from time to time.
[8] Formerly Integrity Principles and Guidelines, 2015 as amended from time to time, or 'IPG' for brevity
[9] ADB may support a part (or a slice) of a government program or the entire government program through RBL. The program or the part that is supported by the RBL is referred to as the RBL program.

3. All persons and entities participating in the programs are bound by ADB's Anticorruption Policy (1998, as amended to date) and the IEF. As such, they must observe the highest ethical standards; take all appropriate measures to prevent or mitigate fraud, corruption, and other integrity violations; and refrain from engaging in such actions in connection with the programs.

B. Definitions

4. These guidelines address the following practices as defined by ADB.

i. A "corrupt practice" is the offering, giving, receiving, or soliciting, directly or indirectly, anything of value to influence improperly the actions of another party.
ii. A "fraudulent practice" is any act or omission, including a misrepresentation, that knowingly or recklessly misleads, or attempts to mislead, a party to obtain a financial or other benefit, or to avoid an obligation.
iii. A "collusive practice" is an arrangement between two or more parties designed to achieve an improper purpose, including influencing improperly the actions of another party.
iv. A "coercive practice" is impairing or harming, or threatening to impair or harm, directly or indirectly, any party or the property of the party to influence improperly the actions of a party.

5. In addition, ADB may investigate conflicts of interest and abuse, as well as other integrity violations enumerated and defined in the IEF:

i. A "conflict of interest" is a situation in which a party has interests that could improperly influence a party's performance of official duties or responsibilities, contractual obligations, or compliance with applicable laws and regulations. To the extent that conflicts of interest may provide an unfair competitive advantage or compromise the integrity of financial and governance systems, conflicted persons and entities must be excluded from participating in relevant program activities.
ii. "Abuse" is theft, waste, or improper use of assets related to ADB-related activity, either committed intentionally or through reckless disregard.

C. Developing Member Country's Actions to Prevent Fraud, Corruption, and Other Integrity Violations in Results-Based Lending for Programs

6. Unless otherwise agreed in writing by the DMC and ADB, the DMC will take timely and appropriate measures to

i. ensure that the program is carried out in accordance with these guidelines;
ii. avoid conflicts of interest in the program;
iii. prevent fraud, corruption, and other integrity violations from occurring in the program, including adopting, implementing, and enforcing appropriate fiduciary and administrative practices and institutional arrangements to ensure that the proceeds of the loan are used only for the purposes for which the loan was approved;
iv. promptly inform ADB of allegations of fraud, corruption, and other integrity violations found or alleged related to a program;
v. investigate allegations of fraud, corruption, and other integrity violations and report preliminary and final findings of investigations to ADB;
vi. respond to, mitigate, and remedy fraud, corruption, or other integrity violations that are found to have occurred in a program and prevent its occurrence;

vii. cooperate fully with ADB in any ADB investigation into allegations of fraud, corruption, and other integrity violations related to the program; and take all appropriate measures to ensure the full cooperation of relevant persons and entities subject to the DMC's jurisdiction in such investigation, including allowing ADB to meet with relevant persons and to inspect all of their relevant accounts, records, and other documents and have them audited by or on behalf of ADB; and

viii. ensure that persons or entities sanctioned or suspended by ADB do not participate in RBL programs in violation of their sanction or suspension.

D. ADB's Actions to Prevent Fraud, Corruption, and Other Integrity Violations in Results-Based Lending for Programs

7. Unless otherwise agreed in writing by the DMC and ADB, ADB will;

i. inform the DMC of credible and material allegations of fraud, corruption, and other integrity violations related to a program, consistent with ADB's policies and procedures;

ii. have the right to investigate allegations, in accordance with the IEF, independently or in collaboration with the DMC, including meeting with relevant persons and inspecting all of their relevant accounts, records, and other documents and having them audited by or on behalf of ADB;

iii. inform the DMC of the outcome of any investigation, consistent with ADB policies and procedures;

iv. have the right to impose sanction and other remedial action on any individual or entity for engaging in corrupt, fraudulent, collusive, and coercive practices, or to suspend any individual or entity during an investigation, in accordance with ADB's policies and procedures; sanctions and suspensions may result in that party's exclusion from an RBL- financed activity or any other ADB-related activity indefinitely or for a stated period;[10]

v. assess ways to respond pursuant to the Anticorruption Policy and other ADB policies and procedures, and may refer the case to appropriate authorities of a concerned DMC, if investigative findings indicate that a government official has engaged in fraud, corruption, and other integrity violations related to a program; and

vi. recognize sanctions determined by other multilateral development banks in accordance with the Agreement for Mutual Enforcement of Debarment Decisions.[11]

[10] Pursuant to ADB's Investigation and Enforcement Framework (2024, as amended from time to time), If a debarred or suspended party has ongoing contracts financed or administered by ADB, its debarment or suspension will generally not affect existing contractual obligations. However, it will require OAI endorsement of any contract variation. Accordingly, the party is required to inform the executing or implementing agency, as relevant, of its debarment or suspension, and that OAI's endorsement is required for a contract variation.

[11] ADB. 2010. Agreement for Mutual Enforcement of Debarment Decisions

PART 2 – WORKS' REQUIREMENTS

Section VI - Works' Requirements

Scope of Works

Name of the Work: WORLD BANK & ADB financed Amaravati Capital City Development Program related [INSERT PROJECT NAME] on Lump sum contract (Percentage Tender).

Brief Description of the work:

1) Acronyms:

a) RoW: Right of Way
b) PCC: Plain Cement Concrete
c) RCC: Reinforced Cement Concrete
d) IRC: Indian Road Congress
e) FRL: Finished Road Level
f) GFC: Good For Construction
g) GIS: Geographic Information System
h) HDPE: High-Density Polyethylene
i) DWC-PE–SN: Double Wall Corrugated Polyethylene - Stiffness Nominal
j) IPS: Intermediate Pumping Station
k) CPHEEO: Central Public Health and Environmental Engineering Organisation
l) DI: Ductile Iron
m) ICT: Information and Communications Technology
n) MORTH: Ministry of Road Transport and Highways
o) BIS: Bureau of Indian Standards
p) ISO: International Organization for Standardization
q) NAC: National Academy of Construction

2) Introduction:

In keeping with the aspiration of the Government of Andhra Pradesh to build the "Peoples' Capital", the land procurement mechanism has been designed to be voluntary and is based on consensual process of land pooling. Land pooling mechanism is mainly adopted for development of the Amaravati Capital City area, wherein, the land parcels owned by individuals or group of Employers are legally consolidated by transfer of ownership rights to the authority, which later transfers the ownership of a part of the land back to the land Employers and balance land proposed to be used for undertaking of development of such areas.

The broad objective of the scheme is to provide fair compensation to the land Employers for residential purposes or commercial activities in exchange of pooling of their agriculture lands. This is in sync with the overall vision of Amravati to be a "People's Capital" and involving people in the development process. Accordingly, the Government have issued the "Andhra Pradesh Land Pooling Scheme".

In pursuance of developing the capital city region, APCRDA has decided to prepare a Smart Integrated Infrastructure works encompassing the Capital City of an area of 217 sq. km which also

includes the development of Tier-II infrastructure for 17000 acres of returnablelands under Land Pooling Scheme.

The Development of [PROJECT NAME] . The Summary of scope for [PROJECT NAME] is as follows

S.No.	Description	Scope
1	[ADD SCOPE DESCRIPTION]	[SCOPE QUANTITY]
2	[ADD SCOPE DESCRIPTION]	[SCOPE QUANTITY]
3	[ADD SCOPE DESCRIPTION]	[SCOPE QUANTITY]
4	[ADD SCOPE DESCRIPTION]	[SCOPE QUANTITY]

The following are the key component to be developed in the [PROJECT NAME] but are not limited to below:

[INSERT DETAILED SCOPE FOR THE PROJECT]

The successful bidder shall complete the work within the stipulated period of completion of __ Months.

Where required, on advice of Employer , the contractor shall carry out detailed soil investigation , geo tech survey and designs in case of balance jobs/ certain pockets of work where in , reconfirmation of stability need to be satisfied. The contractor shall evolve economical and cost effective design for such jobs for which the indicative drawings will be furnished. The contractor shall follow relevant IRC/MORTH/CPHEEO/BIS/ISO/ NEC (National Electric Code)/IE rules/CEI (Chief Electrical Inspectorate) to GoAP/EEC/MID-EC/IEC/NBC/NIDM Guide lines/ ECBC norms including all the state of the art Green features applicable for Infrastructure projects and in conformity with best National & International practices. They have to carry out designing and analysis in the latest versions of design software. Analysis using 3D modelling & NAVIS/Revit(BIM)/ other equivalent platform shall be done by the contractor considering the sequence of the utility crossings like storm water, water supply, sewer, power & ICT ducts etc.

The Contractor shall get the designs and clash analysis proof checked by Indian Institute of Technology Chennai/Hyderabad/Mumbai/Delhi Or another accredited consultant, agreed by the Employer (the "Proof Consultant", the payment to proof consultant shall be done by contractor). The Proof Consultant shall proof check the detailed calculations, drawings and designs, which have been submitted by the contractor. The Contractor shall agree to incorporate any value engineering suggestions made by the PMC/Department/Proof Consultant. The contractor thereupon shall prepare good for construction drawings for approval of PMC/Department and works shall be carried out accordingly.

On completion of work, the Contractor shall submit 6 sets of as built drawings in hard copies and soft copies. The Contractor shall construct and Commission the Work in accordance with the specifications and Drawings. The bidder shall use state of the art software and submit the drawings and designs in the required formats (Geographic Information System (GIS) format or geotagged data..,). Contractor must integrate GIS-based monitoring and reporting systems for real-time updates on project progress, ensuring transparency and efficiency

ECV arrived (Excluding reimbursable items as shown in Part "B" of Schedule A) based on SoR of _____year, with OPC @ Rs. _____ per MT (Excluding GST) as per SoR of _____ Year and Fe-500/Fe-500D@ _____ per MT (Excluding GST) & Fe-415 Steel @Rs._____ per MT (Excluding GST), HSCR Steel bars @ Rs. _____ per MT

(Excluding GST), Mild Steel _____/- per MT (Excluding GST), M.S. Plates @ Rs. _____/- per MT (Excluding GST) as of _____ 2024 year. [TO BE UPDATED AS PER PROJECT REQUIREMENTS]

SCHEDULE -A

Bill of Quantities and Price Bid

Part A: Bill of Quantities:
Attached as Annexure (Will be uploaded in e-procurement)

Part B: Reimbursables (INR in Crores)

1	Seigniorage Charges of all works	[INSERT AMOUNT]
2	Extra @ 100% on Seigniorage Charges towards consideration amount	[INSERT AMOUNT]
3	Extra @ 2% on Seigniorage Charges towards MERIT	[INSERT AMOUNT]
4	Extra @ 30% on Seigniorage Charges towards DMF	[INSERT AMOUNT]
5	NAC @ 0.1% on Part A & B (1+2+3+4)	[INSERT AMOUNT]
6	GST @18% on Part A & B (1+2+3+4+5)	[INSERT AMOUNT]

Technical Specifications

(Annexure enclosed)

Environmental and Social (ES) requirements

SCHEDULE: ENVIRONMENTAL COMPLIANCE BY THE POTENTIAL CONTRACTORS

Table 1: List of Statutory Permissions to be obtained by the Contractors

S. No.	Statutory permission	Regulatory authority
1	Approval of Base Camp Plan	APCRDA/ ADC/ PMC
2	Land lease deed for base camp	State Govt.
3	Consent to Establish (CTE) for Plants establishment	APPCB
4	Consent to Operate (CTO) for Plants operation	APPCB
5	Explosive Licence	Chief Controller of Explosives dept.
6	Authorisation for Storage of Hazardous Chemicals	Chief Controller of Explosives dept.
7	Authorisation for Storage of Hazardous Waste	APSPCB
8	Quarry lease deed and permission	State Mines and Geology Dept.
9	Consent to Operate (CTO) for Crusher Plant operation	APPCB
10	NOC for withdrawal of ground water	State Ground Water Board
11	NOC for withdrawal of surface water	State Irrigation dept.
12	Labour licence	Labour Commissioner
13	Pollution Under Control certificates for construction vehicles	Authorised Emission Testing Centre
14	Environmental monitoring testing	Authorised testing lab
15	Soil Borrow Area approval	APCRDA/ ADC/ PMC
16	Waste Management Plan	APCRDA/ ADC/ PMC

Table 2: List of Applicable Labour Laws for Compliance

S. No	Name of Laws
1	Workman Compensation Act,1923
2	Payment of Gratuity Act,1972
3	Employees PF and Miscellaneous Provision Act,1952 (since amended)
4	Maternity Benefit Act,1961
5	Sexual Harassment of Woman at the work place(Prevention, Prohibition and Redressal) Act,2013
6	Contract Labour (Regulation and Abolition) Act,1970
7	Minimum Wage Act,1948
8	Payment of Wages Act,1936
9	Equal Remuneration Act,1976
10	Payment of Bonus Act,1965
11	Industrial Disputes Act,1947
12	Industrial Employment (Standing Order) Act,1946

13	Trade Union Act,1926
14	Child Labour(Provision and Regulation)Act,1986
15	Inter-state migrant workmen's (Regulation of employment & conditions of services) Act,1979
16	The Building and Other Construction works (Regulation of Employment and Conditions of service), Act,1996 and the cess Act of 1996
17	Factories Act,1948
18	Bonded Labour system(Abolition) Act,1976
19	Employer's Liability Act,1938
20	The Personal Injuries(Compensation Insurance) Act,1963

Table 3: Other Requirements to Comply

1	Accident Incident Register
2	First Aid Box & Register
3	Tool-Box Talk register
4	Awareness training programme on Environment & Safety
5	Approved HSMP
6	Fire Extinguishers
7	Medical Check-up
8	Emergency Response Plan
9	Wages register

Appendix I

ENVIRONMENTAL AND SOCIAL (ES) REQUIREMENTS

Environment and Social Policy

Purpose:

The purpose of the E & S policy is to ensure that all the capital city development works conform to the statutory requirements of the applicable environment and social laws, the E & S requirements of the funding agencies. The E & S policy is a guidance document for the management of environment and social aspects associated with the development works.

Objective:

The objective is to conserve, maintain and strive for enhancement of the quality of the natural resources, culture and socio-economic conditions of the people in the project area by identification of the critical areas, potential impacts, risks and preventing and mitigating impacts and associated risks through management plans and budget with timelines.

Applicability:

The E & S Policy implementation is binding on the Contractors, Sub contractors, PMCs, PgMC, third party contractors associated/engaged in the capital city works. All the persons/firms/institutions on which the E & S policy is binding hereon addressed as party/parties.

Policy

The PIU is committed and will ensure the implementation of the environment clearance conditions, Hon'ble NGT directions issued for the capital city and interlinked projects by incorporation of the relevant conditions in the designs, bill of quantities (BoQ), applicable E & S provisions of the statutory laws, Environment clearance, NGT directions, funding agencies in the Bid documents & contractual agreements with budget allocation for implementation of the E & S provisions in the BoQ.

Wherever applicable, the concerned party shall obtain prior clearances/permissions under the EIA notification, Consents under the Water (Prevention and Control of pollution) Act & Air (Prevention and Control of pollution) Act, Authorisation under the Hazardous waste management rules, Solid Waste Management Rules, C & D waste management rules, Bio Medical waste management rules, AP WALTA act. Further, the conditions of the clearances shall be implemented by integration with designs and BoQs, ESMPs.

Wherever applicable, the concerned party shall obtain prior NOCs from the State Ground Water Board, State Disaster Response and Fire Services Department, Archaeological Survey of India, Labour Department, Petroleum and Explosives Safety Organisation, River Conservator, Forest Department, State Mines and Geology Department, NHAI and other departments. Further, the conditions of the clearances shall be implemented by integration with designs and BoQs, ESMPs.

Wherever applicable, it shall be ensured that under respective labour laws all the registration/license requirements for the firm, workers, migrant workers specific to the project work shall be obtained.

The Contractor with prior approval shall implement Workers code of conduct, site specific Contractors- Environment social management plan considering the E & S policy, ESMP given by the

APCRDA/ADCL, incorporating the conditions of the bid documents. The site specific C-ESMP shall cover the management aspects related to traffic and material transportation from source, waste water, air pollution, solid wastes, hazardous wastes, Grievances, OHS, community health and safety, labour management and recruitment, labour camps.

Wherever applicable, as per the relevant provisions of the labours, all the construction sites, labour camps, shall have basic amenities (sanitary toilets, potable water, water supply for domestic usage, bath rooms, and wash areas) for all the personnel, amenities to women and creche for children, temporary bachelor and family type housing as applicable with minimum room sizes within secured premises, street lighting, sanitation arrangements, common kitchen supplied with environment friendly fuels, rest areas and dining areas, first aid room with basic facilities for patients, first aid kits and female nurse, Ambulance, Safety signages, Site level display boards with information on project/safety/SEA/SH/emergency contacts, Barricades around the project site, Periodic doctor visits for health checkup with onsite qualified and experienced officer/specialists for grievances, Environment, Social, OHS. The contractors shall make MoUs with local Hospitals for emergency issues.

The Contractor is responsible to register all the workers engaged for an agreed work in the capital city under the applicable labour laws. Contractor shall get basic health check-up done of all registered workers prior to commencement of works to know the prevailing diseases, fitness to work. The workers including women shall be given be awareness on occupational hazards, risks and shall be trained on PPE, amenities in the site, gender aspects, SEA/SH, workers Code of conduct, first aid, site specific emergency plans, emergency contacts, Grievance cell and redressal mechanism. Accident Insurance shall be taken for all the workers.

The Contractor shall maintain all registers under labour laws, documents, monitoring reports for all the management plans and shall report to the APCRDA/ADCL. Failing to implement the E & S policy, ESMPs, Statutory obligations and failure to maintain updated data and reporting shall be considered as non-compliance and will be penalised as per the provisions. Failing to obtain necessary statutory permissions/NoCs prior to the commencement of project shall be considered violation and penal clauses under the relevant laws/rules shall be applied.

The PIU is committed to provide a safe working environment for all personnel in the capital city and shall ensure the safety of the workers from Sexual Harassment, Sexual Exploitation and Abuse, Gender based violence on women and child (under the age of 18 years) in the work places, labour camp and in nearby communities. Periodic awareness programmes on the SEA/SH, GBV shall be undertaken by the PIU to the Contractors/Sub Contractors/PMCs/PgMC/nearby communities and reviewed. The workers shall be given awareness on the SEA/SH/GBV punishments under the laws, Sexually Transmitted Diseases, grievance cell arrangements specific to project, grievance officers.

Stakeholders in the capital city shall be informed prior to the commencement of the works about the Phase wise development of projects, Potential Environment & Social impacts, Mitigation measures incorporated in the bid documents and BoQ, Potential labour influx and arrangements obligated to the contractor, measures to prevent SEA/SH/GBV.

Further, the PIU with the help of internal staff, line departments, agencies like SERP of state government and if needed external agencies like NGOs will engage periodically with the women SHGs, adolescent girls, differently abled, vulnerable sections to consider and address their issues during the project execution. PIU grievance cell will be headed by Women officers and on regular basis visit the labour camps to interact with the workers to review the SEA/SH/GBV measures incorporated and practiced in the project site and interact with women workers to know the grievances.

All the Wastes – Domestic, Plastics, Construction and Demolition Waste, Hazardous, Batteries, E Wastes shall be managed and disposed scientifically. All the project sites including labour camps shall have arrangements for collection of wastes, segregation of wastes, temporary storage. The contractors shall handover the relevant stream of wastes to the authorised recyclers/facilities. As instructed, if needed certain wastes shall be deposited at the intermediate collection centers. Records related to total wastes generated, segregated streams and quantities disposed shall be maintained and reported for all kinds of wastes. Proof of evidence for the disposal shall be maintained and reported.

Measures for the prevention, control, mitigation of the pollutants and emissions from all the project activities shall be taken up to ensure that the air (includes noise) quality is maintained for the safety and well-being of the personnel and communities. The vehicles, DG sets which meet the Bharat stage IV norms with PUC certification, Noise generating equipment with silencers/acoustic enclosures shall be used or site/area level appropriate dust, pollution, noise attenuation measures shall be taken up, recorded and reported.

All the prohibited chemicals by the Government, prohibited /regulated under international convention on hazardous chemicals or any global treaty under climate change etc to which India is a signatory shall be prevented/regulated from usage in the capital city works.

All the water bodies including the ground water shall be conserved and protected. No waste/material in any form shall be discharged/dumped in the water bodies to prevent pollution and disturbances to the ecology.

The sewage generated in the capital city shall be treated to the reuse standards and shall be used for the greenery development and maintenance, cleaning, fire fighting, industrial purposes, District cooling. Appropriate technologies shall be adopted to achieve the treated to reuse standards. The treatment quality shall be monitored.

The contractors/PMCs/PgMCs shall ensure that all the works have appropriate onsite facilities for the scientific management of the waste water, construction runoffs, spillages, leakages, treated waste water. The details on waste water generation from all activities, treated and recycled, disposal location along with quality shall be recorded and reported.

Source of water shall be from surface sources and ground water usage shall be with prior permission from the appropriate authority and subject to the clearance conditions issued for the project. Water shall be treated to the IS 10500 standards with appropriate treatment facilities. Water conservation measures shall be incorporated in all practicable item of works in the estimates for the capital city works. Flow meters as per the norms and CPHEEO guidelines, EC conditions shall be considered to account and audit the water usage.

Water for the construction activities and the details of the water source, quantities shall be recorded and reported. Water quality must be ensured prior to its application. Details of water quality reports shall be maintained and reported. Water conservation measures shall be incorporated in the C – ESMP and with prior approval from the engineering wing, latest technologies can be used to reduce water requirements for the construction activities.

Energy requirements during construction stage and operation stages shall be optimised by using BEE minimum 3 star rated equipment/appliances.

The top soil of 30 cm depth shall be excavated and stored in the designated location or within the project boundary as instructed by the PIU. The Top soil shall be used for the development of the greenery in the capital city area. The excavated soils below 30 cm shall be stored separately and shall be used within the capital city for the raising the levels of the sites and for filling in low lying areas.

The contractor shall undertake environment monitoring of surface water, ground water, soil, noise, air on monthly basis within the project site and shall submit the reports.

The PMCs, PgMC shall on periodic basis review and report the implementation of the E & S policy.

The Contractor shall submit C- ESMP considering all the mandatory E & S requirements during the contract period and while considering payment to the invoices, the details of the trainings undertaken, pollution control measures taken up, results of the monitoring, evidences of the registers maintained, waste management, water procured for dust control, PUC of the vehicles, amenities in the site and the operational status, air pollution and noise pollution control measures, traffic control measures, permissions/NoCs/ insurance for the workers/health check up/accidents/grievances etc shall be submitted to the ESMU. For Each invoice, on certification from the ESMU, work bill proportionate to recommended amount of allocated 1 % for the ESMP shall only be released.

The Contractor shall submit a Quarterly Environmental and Social Compliance Report to the Employer with the following indicative items:

- Progress in implementing the Contractor Environmental and Social Management Plan (C-ESMP).
- Key activities undertaken to address environmental impacts and social concerns.
- Status of compliance with environmental and social safeguards, including mitigation measures.
- Any incidents of non-compliance and corrective actions taken.
- Updates on community engagement, grievance redressal, and adherence to Gender-Based Violence (GBV), Sexual Exploitation and Abuse (SEA), and Sexual Harassment (SH) guidelines.

Appendix II

ENVIRONMENTAL & SOCIAL MANAGEMENT PLAN

A. Guidelines for Preparation of Environment and Social management plan

Project Activities:

The project activities may include permissions form the regulatory bodies, clearance of the ground, excavation of the top soil, excavation beyond top soil, other modifications to the existing natural and cultural assets, various onsite tests for surface/subsurface profile required for construction, material transportation from source through existing roads/ roads passing through the settlements, loading and unloading activities, stocking of materials, heavy vehicles/machinery activities, use of generator sets, storage of chemical/fuels, influx of labor, labor camps with minimum amenities, generation of sewage/sludge/septage, generation of solid waste including C&D waste and hazardous wastes, collection, transportation and disposal of liquid and solid wastes, transportation of the top soils/excavated soils to the designated locations, onsite safety, trainings, Grievances, Gender issues, Reinstatement/restoration of all establishments etc.

Need for Environment and Social Management Plan (ESMP):

The above activities include the preconstruction, construction and decommissioning works and these activities clearly indicate disturbances/modifications in the existing project site, additional traffic load and introduction of heavy vehicles during entire project duration, influx of population in the form of workers, employees, visitors etc, movement of materials, chemicals, fuels, generation of wastes and their disposal.

All these aspects certainly create impacts if they are not planned and managed scientifically. The possible areas of the impacts are due to changes in water bodies, soils, Air and in the settlements near to the project areas. Therefore an environment and social management plan is requisite.

Environmental & Social Impacts

Mandatory Implementation of ESMP

- *Capital City Project issued with an Environmental Clearance and has mandated conditions related to Environmental and Social management, which is binding in all aspects in the capital city.*
- *NGT directions were issued on the capital city project which is binding in all aspects of environmental protection.*

- *The funding agencies have mandated the implementation of Environmental & Social Management Plan.*

Therefore, there is a need for Project-specific ESMP (C-ESMP) to be submitted by the Contractor for approval prior to commencement of works at site.

a) the Contractor shall not carry out any Works, including mobilization and/or pre-construction activities (e.g. site accesses and work site establishment, geotechnical investigations or investigations to select ancillary features such as quarries and borrow pits), till the appropriate measures are in place to address environmental, social, health and safety risks and impacts.
b) The Contractor shall apply the Management Strategies and Implementation Plans and Code of Conduct, submitted as part of the Bid and agreed as part of the Contract.
c) The Contractor shall submit, on a continuing basis, for the ESMU's prior approval, such supplementary Management Strategies and Implementation Plans as are necessary to manage the ESHS risks and impacts of ongoing works. These Management Strategies and Implementation Plans collectively comprise the Contractor's Environmental and Social Management Plan (C-ESMP). Project-specific ESMP (C-ESMP) to be submitted by the Contractor for approval prior to commencement of works at site (e.g. excavation, earth works, bridge and structure works, stream and road diversions, quarrying or extraction of materials, concrete batching and asphalt manufacture).
d) The approved C-ESMP shall be reviewed, periodically (but not less than every six (6) months), and updated in a timely manner, as required, by the Contractor to ensure that it contains measures appropriate to the Works activities to be undertaken. The updated C-ESMP shall be subject to prior approval by the ESMU.

C-ESMP shall include/consider

a. ESMP incorporated in the bid document
b. Recommendations of the funding agencies,

The following Management Strategies and Implementation Plans (MSIP) shall be considered by the Contractor to incorporate in the C-ESMP:

- *Traffic management plan to ensure smooth traffic flow around the worksites and the safety of local communities from construction traffic Strategy for the protection of workers and community from construction-related hazards*
- *Pollution prevention (wastewater, air and noise emissions) and management*
- *A waste management strategy for proper collection and disposal of waste*
- *Strategy to address labor influx impacts on the local communities*
- *Gender-based violence and sexual exploitation and abuse prevention and response action plan*
- *Emergency response plan and early warning system*
- *E&S Requirements Section Of The Bid Document*

Further, the C-ESMP shall include the following Management Plans:

- *OHS Management Plan*
- *CHS Management Plan*
- *Waste Management Plan.*
- *Wastewater Discharge Management Plan*
- *Air And Noise Emissions Management Plan*

- *Hazardous Material Management And Spill Control Plan*
- *Workers Accommodation Plan*
- *Management Of Labor Influx And Facilities For Foreign Workers*
- *Labor Recruitment Procedures And Labor Management*
- *Traffic Management Plan Including Transport Of Materials From Quarries*
- *Training Plan for E&S Risks, Including HIV/AIDS, SEA, and GBV.*
- *Emergency Response plan*
- *Grievance Redressal Mechanism (GRM)*
- *SOPs, as provided by the Employer*
- *Demobilization plan after completion of works.*
- *SEA/SH Action Plan (will include, but not be limited to, details for:*
    - *Reporting of SEA/SH Incidents: The Bidder must immediately inform the Engineer (or project gender/GBV focal point) of any SEA/SH allegations or incidents, ensuring confidentiality. The report should include the type of allegation (sexual exploitation, abuse, or harassment), and the gender and age of the affected person. The bidder must also notify the Engineer of any such incidents occurring on Sub-consultants' or suppliers' premises related to the Works. Sub-consultants and suppliers are required to promptly inform the bidder of any SEA/SH incidents.*
    - *Training of bidder's Personnel: The bidder must provide appropriate training and sensitization on the prohibition of SEA and SH to relevant personnel, including sub-consultants*

All projects shall consider the conditions of the Capital city EC. Further building projects shall also consider conditions of interlinked project EC.
EIA, EMPs shall be referred for the aspects related to Safety, Plantation, Water and Energy conservation etc .
The above mentioned ECs, EIAs, EMPs are displayed on APCRDA website.

c. Zone of influence

A minimum buffer zone upto 500m from all proposed work activities shall be considered as *Zone of influence* in preparation of C-ESMP in addition to the above aspects.

Sensitive areas:

- Educational Institutions (Anganwadis, Schools, Colleges, Universities etc), Health facilities, other public and semi-public areas-Courts, Legislative Assembly etc)
- Cultural Properties such as Temples, Church, Maszid etc
- Water Bodies:
    - Surface water bodies (Rivers, Ponds, Lakes etc) and
    - Ground water bodies (Bore wells, Hand pumps etc)
- Habitations
- Existing Trees, Parks
- Forest Area
- Historical & Archeological/Religious monuments

- Places of Tourist importance

Critical Infrastructure:

- Underground water supply lines and other pipelines/cable network
- Substations/WTPs/Existing lift irrigation schemes & Supply lines

Other aspects:

- It shall also consider establishment of Construction Camp, Labour Camp and Construction Plants (Hot Mix Plant, RMC/Batching Plant, WMM Plant etc) as per the project needs.
- It shall also consider the material transport routes to the project site.
- It shall also consider material (top soil, excavated soil, C&D waste and other wastes) transportation, routes from the project site to the designated locations
- Nearest project activities

d. Environmental aspects shall be considered in preparation of the C- ESMP

- Ground water table in the project area
- Proximity and HFL in the nearest stream/water body

Meteorological (nearest station data)

- Predominant wind direction and speed in the context of anticipated impact on the downwind direction,
- Maximum Hourly Rainfall in the mandal
- Min and Max Temperatures in the mandal

B. ENVIRONMENT & SOCIAL MANAGEMENT PLAN (ESMP)

The Amaravati capital city project environmental clearance has been issued on 9.10.2015 and amended on 11.6.2018 by State Environment Impact Assessment Authority, AP, MoEF& CC.

All the capital city works shall be taken up in compliance to the conditions of the Environment clearance and therefore an indicative ESMP is attached, and it shall be followed. All the environmental laws and latest standards applicable and instructed shall be adopted to meet the overall project goals. The contractors shall comply with the EC and Amended EC conditions.

The contractors, sub-contractors, third – parties associated with the capital city contractual works shall ensure that all the applicable environment clearance conditions are adhered at the project level. This includes labour camps and potential areas of environment impacts.

Contractors associated with project works shall prepare and submit project level environment and social management plan, Health and safety management plan, Waste management plan, Traffic management plan, emergency response plan. The details of its implementation, related documentation shall be reported to the APCRDA on periodic basis and as instructed.

As part of implementation of the ESMP, health and safety, periodic monitoring of environment parameters shall be done within the project boundary, labour camps and potential environment impacts areas.Arrangements like availability of relevant E & S technical personnel in project team, having tie -ups with NABL certified labs, budget allocation for implementing the above stated management plans shall be done by the contractor.

All the registers required under the labour laws, environment monitoring data, Training, ESMPs, Organisation policies etc shall be made available in the construction sites.

The C – ESMP shall be prepared considering the EIA/EMP of the capital city and project specific EMP, RAP and RPF.

Environmental Social Management Plan (ESMP) during Pre-Construction and Infrastructure Development
1.GeneralRequirements

Sl.No	Procedure/practices	Description	Responsibility
1.1	Building and Other Construction Workers (Regulation of Employment and working Conditions) Act, 1996). The building & Other Construction Worker's welfare Cess Act, 1996	This act is applicable for those construction activity whose cost is more than Rs. 10,00,000. Since the project cost is above 10 lakhs, the Act is applicable to this project. All rules and procedure under this rule should be followed as 1. Registration of establishment under this Act. 2. Registration of building workers under this Act. 3.Provision of health and Safety measures for the construction workers in conformity with ILO convention No. 167 concerning safety and Health in construction.	Contractor
I.2	Safety officer	Any activity which is carried out by 500 or more workers, appointment of a Safety officer is required under the BoCW Act 1996.	Contractor
1.3	Temporary shelter	The housing for construction workers may be in the form of temporary structures to be removed after the completion of the project. Construction camps and temporary labour sheds shall be located away from the construction site. Construction camps shall be provided for construction personnel to avoid indiscriminate dispersed settlement of construction workers and labourers.	Contractor

		Provision shall be made for the temporary housing of construction labour within the site with all necessary infrastructure and facilities such as fuel for cooking, mobile toilets, mobile STP, safe drinking water, medical health care, crèche etc.	
1.4	Medical Services, First Aid, Sanitation	Provide First –Aid box at suitable locations. This First –Aid box should be approved by consulting physician. Facility for the treatment of injured person should be predefined. Telephone no. of physicians, hospitals or ambulances shall be available in the Labour camp and construction site. Potable drinking water in sufficient quantities should be available at site. Adequate no. of sanitary toilet facilities should be arranged at site.	Contractor

2.Occupational Safety

Sl.No	Aspect	Impact	Proposed Mitigation measures	Responsibility
2.1	Personnel protection equipment	Personnel protection	Necessary approved work place and occupation specific PPE like helmet, eye protective wear, safety belt, shoes, gloves, jackets, ear plugs, masks should be provided to workers and personnel in the site. Arrange training & awareness program for the effective use of PPE.	Contractor
2.2	Site preparation	Accessibility	Accessible roads to the site should be safely and properly marked for any danger points like slippage, deep hole, and mud. They should be identified and barricaded.	Contractor
		Entry	Prevent unauthorized entry into the project site. Prevent unauthorized persons access to identified danger points.	Contractor
		Site Levelling	Maximize reuse of Topsoil (30 cm) for greenery development within project site. Details of used and Excess unutilized top soil stocks shall be submitted to the Authority. Maximize reuse of the excavated soil within the project area for leveling purpose.	Contractor
		Excavation activities	All excavation activities shall be done in a planned way. All excavated areas shall be barricaded to prevent accidents.	Contractor
2.3	Spillage of oil and lubricant	Soil Contamination and slippage	Leak proof containers will be used for storage and transportation to prevent any slippages and contamination of soil, surface and ground water. An oil trap should be provided in the drainage line to prevent contamination from accidental spillage of oil. The floors of oil/ grease handling area and	Contractor

			the drains to collect floor washings shall be impervious.	
2.4	Sign, Signals and Barricades	Precaution measures	Display of relevant informative/safety/hazard sign boards, symbols and accident prevention tags shall be done at all necessary locations and to further compliance of safety norms.	Contractor
2.5	Material Storage, Handling, Disposal	Falling hazards	All material stored in stacks, in racks shall be secured to prevent from sliding, falling or collapse. Aisles and passageways in the stores shall be kept clear and in good condition. Necessary sign boards shall be displayed.	Contractor
2.6	Hand and Power Tool	Cutting, shearing, electric shock	Hand tools should be serviced regularly. Ensure that all portable hand tools are periodically tested and certified. Ensure that all power tools, belts, gears, shaft, pulleys, sprockets, spindles, drums, fly wheels, and chains are properly guarded. All electric power operation tools/equipment are provided with earthing or double insulated.	Contractor
2.7	Ladders and Scaffoldings	Falling from height	Ensure that all ladders and Scaffoldings are in good and safe condition. Ensure that Scaffolds should be capable of supporting at least four times their maximum intended load. Ensure that footing or anchorage for scaffolds are sound, rigid and capable of bearing maximum intended load without settling or displacement. Ensure that ropes, slings, hangers, platforms, and other supporting parts of two point suspended scaffolding are in proper position. Inspection of these supporting equipment shall be done before every installation.	Contractor
2.8	Cranes, Derricks, Hoists, Elevators, Conveyors	Breaking, physical hazard	It shall be ensured that rated load capacity, recommended operating speeds, and special hazard warnings are displayed on all equipment and they shall be visible from equipment/machine operator's cabin. Equipment should be tested /inspected annually and the records of servicing/repairs shall be maintained. It shall be ensured that before leaving a crane unattended, its boom should be lowered to the ground level. The carrying load should not exceed the Safe working load.	Contractor
2.9	Floor and Wall opening	Fall from height	Ensure that all openings in floor and wall are properly guarded with standard railings and sign boards.	Contractor

			Ensure that open platforms located two meter or above the ground or floor levels should be guarded by standard railing.	
2.10	Welding and Cutting	Toxic gas inhalation, Explosion in the gas Cylinder	Ensure that certified and trained personnel are deployed for these activities. Appropriate PPE for eye and face protection are supplied and used by the personnel deployed for this activity. Ensure that cutting & welding fumes concentration are not exceeding the TLV by ensuring necessary mechanical ventilation system to exhaust the toxic gases. Ensure that all compressed gas cylinder secured are in an upright position at all time. Ensure that Arc frames of all Arc welding and cutting machine are grounded. Arc torch should be inspected for any leaking from shut off valves, hose couplings, and tip connection before starting the job.	Contractor
2.11	Electrical equipment and connection	Electrical Shock	Live part of all electric equipment should be guarded against accidental contact. Ground Fault circuit interrupters should be used to protect the user. Path of cable from Circuit should be safe and free from any heat radiation, sharp edges etc. Polarity of the conductor should be correct.	Contractor
2.12	Traffic/Vehicle management	Noise and emission	Effective traffic management plan will be implemented to ensure proper movement of vehicles and prevent traffic delays in and around the project area. Vehicle Parking areas should be clear and marked. The keys of the all-unattended vehicle should be kept with driver. Restrict unnecessary blowing of horn. Sign boards shall be displayed as required. Ensure that only vehicles with valid PUC certificates are operated.	Contractor
2.13	Occupational health	Worker health	All the labourers to be engaged for construction works shall be screened for to find out health conditions and only healthy individuals shall be permitted to work. Periodic health check-up of construction workers shall be done.	Contractor

3. Air Pollution and Prevention

Sl.No	Aspect	Impact	Proposed Mitigation measures	Responsibility
3.1	Particulate	Impact on humans	DG sets shall be used only as power back.	Contractor

	emission, fugitive dust, gaseous emissions from construction activity emergency/ temporary use of DG sets, traffic movement	and environment	Only Approved D.G. sets shall be used. Stack shall be arranged to prevent ground level concentrations from the emissions. More emphasis should be given on deployment of vehicles with valid Pollution Under Control (PUC) certificates for all vehicles deployed by contractor, sub-contractor, third party agencies. Gas based DG sets, Mobile solar power supplying systems shall be given priority as a power back up. As a last resort, Low sulphur diesel type diesel generator sets should be used during emergency periods in construction phase.	
3.2	Unpaved roads	Fugitive dust, impact of human health and environment	Dust suppression measures shall be taken up in all potential areas of fugitive dust emissions. Ready-Mix concrete shall be used. Batching plant to be established away from the settlement area as per the guidelines of the PCB. Water fogging around the openly stocked material or barricading shall be erected around the openly stored material stocks as per the site engineer's instructions. Contractor shall submit details on dust and emission control, monitoring and implementation in ESMP. Personnel working in potential dust and gas emission areas shall be provided with face masks. Trucks used for material transportation which lead to fugitive dust emissions shall be covered. Water fogging or sprinkling shall be done at all locations where dust generation is anticipated.	Contractor
3.3	Exhaust emissions from vehicle movements	Fugitive dust, impact of human health and environment	Vehicles permitted as per the BS norms under each category and with valid PUC certificates only shall be used for construction activities.	Contractor

4- Ambient Noise and vibration

Sl.No	Aspect	Impact	Proposed Mitigation measures	Responsibility
4.1	Temporary increases in noise levels at the nearest residential receptors and mixed use area	Impact on nearest residents and workers	Use low noise certified equipment/machines wherever possible. Ensure vehicles, equipment and machinery are properly maintained, especially the engine exhaust silencers. Ensure that all rotary driven construction	Contractor

			equipment has appropriate noise suppression devices installed and is well maintained. Machinery should be turned off when not in use in all practicable cases. Make use of screening for high noise activities. Mechanics will be staffed in the construction site to ensure maintenance of the construction equipment and noise suppression devices. It shall be ensured that construction personnel working near noise generating activities use ear plugs and earmuffs. Diesel generator sets during construction phase shall have acoustic enclosures and shall conform to Environment (Protection) Rules, 1986 prescribed for air and noise emission standards.	
4.2	Pile and foundation construction, road construction, operation of machinery like compressors, compactors, concrete plant, cranes etc. as well as transportation of vehicles.	Impact on workers in high noise level areas.	Noise protection equipments such as noise shields for high noise producing equipments shall be arranged. PPEs like ear muffs/plugs to workers shall be provided during construction activities. Efforts shall be made to restrict use noise levels to standards during construction hours.	Contractor
4.3	Vibrations are caused due to heavy dumpers, and construction machineries	Impact on workers.	Vibration dampening tools shall be used and workers deployed to such works shall be for limited hours.	Contractor

5- Land environment

Sl.No	Aspect	Impact	Proposed Mitigation measures	Responsibility
5.1	Construction of approach roads	Impact on land environment- soil erosion	Prior to construction activities, the top soil up to 30 cm depth shall be excavated and stored separately. Top soil shall be utilized for landscaping activities.	Contractor
